1. In view of the Fukushima experience, the consultation process should be delayed until lessons can be learned.

2. The plutonium should not be turned into MOX fuel, as this is more costly than uranium fuel, and far more costly and problematic to dispose of. The MOX plant at Sellafield has not lived up to expectations, and will eventually cost some £2 billion, requiring a huge subsidy.

3. To cut losses, the plutonium should be vitrified and eventually disposed of.
