Subject: FW: horn lane line and final report

Hi [redacted]

I discussed this with [redacted] and she said that the site won't be reporting until early/mid-2014.

Just so you're aware, there have 67 exceedences this year to date at Horn Lane.

I very much appreciate the support you've given Horn Lane through the Defra AQ grants programme but given this site may be the difference between compliance/non-compliance might it be worth you, me and the EA sitting down to see how we can fund a more dramatic set of interventions at this site?

Thanks

[redacted]

Subject: horn lane line and final report

Hi [redacted]

Just to share with you our line on Horn Lane which press office will work from should they get any questions.

The final report is also attached for info. Sorry this is a little later than I hoped to send around.

It will be published later on today

[redacted]

Why is it proposed that the Horn Lane particulate matter monitor is included in the network? When will data from this site be reported to the Commission? Will this lead to non compliance in London?

Horn Lane is proposed to be included in the network because it is clear that this station meets the prescriptive siting criteria in the Directive, and records higher concentrations than any of the stations in the current network, or the modelling results. The station is affected by a number of sources, including industrial and traffic sources and so would not be expected to be picked up in the national scale modelling. Defra has been working closely

with the Environment Agency, Greater London Authority and the Local Authority to reduce pollution levels at this site.

The current monitoring equipment at the Horn Lane station is not compliant with the requirements of the Directive, and several upgrades must be made before this station can be affiliated. It is anticipated that this will take place in early 2014, and that data would first be reported to the Commission in September 2015. It is not possible to determine at this stage whether this station will lead to non compliance in London with the particulate matter limit values.
