HM Prison and Probation Service COVID-19 Official Statistics

Data to 30 June 2021

Ministry of Justice

Published 9 July 2021

Introduction

This official statistics release provides monthly data on the spread of COVID-19 in the prison and probation service in England and Wales and mitigating actions being taken to limit the spread of the virus and save lives. This release covers the period from Monday 16 March 2020 at the start of the COVID-19 outbreak to 30 June 2021.

It provides information on:

- Deaths where prisoners, children in custody or supervised individuals have died having tested positive within 28 days of the death or where there was a clinical assessment COVID-19 was a contributory factor in their death regardless of cause of death.
- Confirmed COVID-19 cases in prisoners and children in custody (i.e. positive tests).
- Narrative on capacity management data for prisons.

Key Findings

The key findings in this release are:

- **196** prisoners, children in custody and supervised individuals have died having tested positive within 28 days of death or where there was a clinical assessment COVID-19 was a contributory factor in their death. Of whom **149** were prisoners and **47** were individuals supervised by the probation service. There have been **no** deaths since April 2021.
- Of the **196** deaths, **168** were suspected or confirmed to be caused by COVID-19, **123** were prisoners and **45** were supervised individuals.
- **16,933** prisoners or children in custody have tested positive for COVID-19 since the start of the pandemic, across **127** establishments, almost all of whom were adults.

- There were **51** new confirmed prisoner and children cases in June 2021, a **26%** reduction compared to the number of new cases in May 2021. **Two** children tested positive in June 2021, the first child cases since March 2021.
- **22** establishments had prisoners or children testing positive in June 2021, **3** more sites than in May 2021.

Background

Since the start of the COVID-19 pandemic, there has been keen public and Parliamentary interest in how the Ministry of Justice (MOJ) and Her Majesty's Prison and Probation Service (HMPPS) are managing the running of prisons and the probation system to limit the spread of the virus while maintaining the core functions of these vital parts of the justice system. Publishing this data aims to bring transparency to the strategies HMPPS is employing to manage the prison and probation systems, as well as the impact of the virus on the individuals in the care of HMPPS and staff.

The core tenet of HMPPS's prison strategy, building on Public Health England (PHE) and Public Health Wales (PHW) advice and learning developed in managing an early outbreak of the virus, is the implementation of effective isolation, reverse cohorting of new entrants to custody, and shielding of vulnerable prisoners.

1. Capacity management

As at 25 June 2021, the prison population was 78,300, showing a reduction of 5,700 since 13 March 2020¹. Whilst total population has reduced, the remand population has increased during the pandemic, mostly due to the challenges in holding Crown Court trials during this period.

HMPPS have adopted a capacity management approach known as 'compartmentalisation'. This involves the isolation of all prisoners with symptoms, the shielding of vulnerable prisoners in the system and all new arrivals being quarantined for 14 days. These measures minimise the risk of infection spreading throughout prisons, but also impact prison capacity.

The strategy is being kept under ongoing review and regularly adapted in response to operational learning as well as evolving pandemic risks in the community. There is a balance between effective infection control and maintaining a commitment to support prisoners through their custodial sentence and help them access appropriate services.

2. Deaths

The service has taken the measures outlined to limit the spread of the virus and to protect staff and individuals in the care of HMPPS. However, prisons and probation, like all other sectors in the England and Wales have experienced deaths due to COVID-19.

The counting of deaths in prisons and probation are aligned to the Public Health England definition, and reports on deaths where the individual had tested positive for COVID-19 or

¹ <https://www.gov.uk/government/statistics/prison-population-figures-2020>

where there was a clinical assessment that COVID-19 was a contributory factor in their death. This consists of:

- Deaths suspected or confirmed to be due to COVID-19
- Deaths believed to be due to other causes, but where the individual had tested positive for COVID-19.

From March 2020 to the end of June 2021, 196 individuals in the care of HMPPS died having tested positive for COVID-19 within 28 days of death or where it was confirmed post mortem as a contributing factor. 149 were prisoners. There were no deaths of children in custody. Amongst the supervised individuals, there were 47 deaths. Of these, 31 were under National Probation Service supervision and 16 under Community Rehabilitation Companies supervision. Figure 1 shows the cumulative number of prisoner and supervised individual deaths since March 2020.

Figure 1: Cumulative number of individuals in the care of HMPPS who have died testing positive within 28 days of the death or where it was confirmed post mortem, England and Wales, monthly from March 2020 (Source: Summary Tables, Table 1)

49 deaths occurred before July 2020 and 147 deaths have occurred since September 2020. There have been no deaths of individuals in the care of HMPPS since April 2021.

Of the 149 prisoner deaths, 123 are suspected or confirmed to be due to COVID-19. The remaining 26 deaths are believed to be due to other causes, although the individuals had tested positive for COVID-19. Of the 47 individuals under probation supervision who have died, 45 are suspected or confirmed to be due to COVID-19 with the remaining 2 believed to be due to other causes, but where the individual has tested positive for COVID-19.

The cause of death in each case is provisional until the official cause of death has been determined by the coroner. As such revisions may be made to the data as part of this process.

Data relating to the deaths of prison and probation officers to 30 April 2021 have been published in the [HMPPS Workforce Statistics](https://www.gov.uk/government/collections/national-offender-management-service-workforce-statistics)².

² <https://www.gov.uk/government/collections/national-offender-management-service-workforce-statistics>

Data relating to the deaths of service users have also been published in the National Statistics report [Safety in Custody](#)³ and will be published in the official statistics report [Deaths of Offenders in the Community](#)⁴.

3. Testing

Testing practices in prisons and Youth Custody Service (YCS) sites have been determined locally. Initially, once a small sample of prisoners or children had tested positive in an establishment, no further tests were carried out on symptomatic individuals to preserve testing kits and on the assumption all further tests would be positive. This policy was changed on 15 April 2020 due to the increased availability of testing supplies meaning all symptomatic prisoners or children are now tested. As such data trends should be considered with caution and do not represent true like-for-like comparisons.

In the period to 29 June 2021⁵, a cumulative total of 16,933 prisoners or children tested positive for COVID-19 across 127 establishments. Less than 1% of these positive tests were children. There were 51 new confirmed cases in June 2021, a 26% reduction compared to the number of new cases in May 2021. Figure 2 shows the cumulative monthly individuals testing positive for COVID-19 to 29 June 2021.

Figure 2: Cumulative number of prisoners and children in custody testing positive for COVID-19, England and Wales, monthly from March 2020 (Source: Summary Tables, Table 2)

22 establishments had prisoners or children testing positive during June 2021, 3 more sites than in May 2021. Two children in custody have tested positive for COVID-19 in June 2021, the first children cases since March 2021. Figure 3 shows the monthly number of establishments with prisoners or children in custody testing positive since March 2020.

⁴ <https://www.gov.uk/government/collections/death-of-offenders-in-the-community>

⁵ 29 June 2021 was the last working day in the month the testing data was collected centrally.

Figure 3: Monthly number of Prison or Youth Custody Service establishments with prisoners or children in custody testing positive for COVID-19, England and Wales, monthly from March 2020 (Source: Summary Tables, Table 2)

Recognising the unique environment in prisons, HMPPS now routinely test staff and offenders to bolster defences against the virus – to identify and isolate cases earlier and move quickly to contain outbreaks, protect local NHS and save lives.

HMPPS has been working closely with the Department of Health and Social Care, the NHS, and health authority colleagues in England and Wales for a number of months on providing access to COVID-19 tests in a prison environment. Initially, this involved the testing of symptomatic prisoners; then during summer 2020 the testing of all consenting prisoners commenced, along with HMPPS employees and non-directly-employed staff across 28 prisons in England.

More recently, additional testing capacity has been made available to limit the importation of infection into prisons. This includes the regular testing of staff across all prisons and carrying out the asymptomatic testing of new receptions to stop the virus spreading into and between prisons. Lateral Flow Device (LFD) testing has been introduced to supplement the existing current PCR testing and is available for all staff attending the workplace and for prisoners the introduction of LFD testing for receptions, transfer, release, pre-court attendance and release on temporary licence.

Data Quality

Although care is taken when processing and analysing the returns, the detail collected is subject to the inaccuracies inherent in any large-scale recording system. Any inaccuracies may result in revisions of previously published information in future releases. Much of the data collected during the COVID-19 pandemic has been done at pace, with recording practices evolving as we understand more about the requirements and conditions we are facing. In order to present the timeliest information, the data presented in this report have not been subjected to the usual standard of quality assurance associated with official statistics.

Much of the data will undergo additional assurance in due course and be reported as official statistics in the following releases:

- [Safety in Custody](#)
- [Deaths of Offenders in the Community](#)

All deaths are phoned into MOJ headquarters on a daily basis. The cause of deaths in prison are classified as *apparent* until a police investigation and coroner's inquest have been concluded and the Prisons and Probation Ombudsman's office publish a detailed 'Fatal Incident Report'. Recording practices for COVID-19 related deaths have been updated since the start of the pandemic, meaning the exact cause is not always available or known. Furthermore, the cause of many deaths will be uncertain and awaiting an inquest; we have taken steps to reflect this uncertainty by reporting all cases in which COVID-19 was suspected to be a factor.
