

How providers intending to deliver Higher Technical Qualifications plan to attract, engage and work with employers

create an employer HTQ **toolkit** to raise awareness

expand activities within existing local networks

facilitate **employer consultation group** through online updates, email updates and surveys

difficult to engage smaller providers and GP surgeries due to staff availability, so we will create a HTQ **webinar series** that will be recorded and made available to them

work with **Chamber of Commerce / Skills Advisory Panel** to form partnerships with local employers, ensuring the curriculum is designed and developed by employers

engage local employers to support the provision, with the additional aim to develop employment opportunities via a **recruitment event**

invite employers to speak at **lectures** and **workshops**

embed a **competitive and showcasing** theme to the programme for learners to work on employer projects

offer **our facilities** for employers to host their own staff development sessions

host **employer breakfast and networking** events

invite engaged employers to **assess** and **mentor** students

academics with clinical experience will be **available to employers** to answer questions
