

# BEIS Public Attitudes Tracker: Energy Infrastructure and Energy Sources

## Winter 2021, UK

31 March 2022

Official Statistics

This report covers questions on energy infrastructure and energy sources from the Autumn and Winter 2021 waves of the BEIS Public Attitude Tracker. The report includes a quarterly tracking measure on support for renewable energy; findings from Autumn 2021 on awareness and/or support for different types of renewable energy, fusion energy, shale gas, and small modular reactors; and results for Winter 2021 on nuclear energy.

**What you need to know about these statistics:** These results from the BEIS Public Attitudes Tracker (PAT) were collected using the Address Based Online Surveying (ABOS) methodology introduced in Autumn 2021, which uses random probability sampling. The results should not be compared with previous PAT surveys, which used different data collection methods. For details, see the Technical Overview.

The table below shows the topics covered in this report and when these questions were included in the BEIS Public Attitude Tracker. Links are included to the findings for each topic within this report.

Topic	When included	Link to findings
Support for renewable energy	Quarterly	<a href="#">Link</a>
Support for different types of renewables	Autumn 2021	<a href="#">Link</a>
Awareness and support for fusion energy	Autumn 2021	<a href="#">Link</a>
Awareness and support for shale gas	Autumn 2021	<a href="#">Link</a>
Awareness of small modular reactors	Autumn 2021	<a href="#">Link</a>
Attitudes towards nuclear energy	Winter 2021	<a href="#">Link</a>

# Support for renewable energy

In Winter 2021, 86% of the public said they supported the use of renewable energy such as wind power, solar energy and biomass to provide electricity, fuel and heat (Figure 1.1). This figure has remained stable over the last quarter (87% in Autumn 2021). Opposition to renewable energy remained low, with just 1% of people said they opposed renewable energy.

**Figure 1.1: Whether support use of renewable energy (based on all people), Winter 2021**

RENEWSUPPORT. The next question is about renewable energy. This includes a number of different forms of energy, such as wind power, solar energy and biomass. Do you support or oppose the use of renewable energy for providing our electricity, fuel and heat?

Base: All wave respondents – Autumn 2021 (5,558), Winter 2021 (3,705) (Asked Quarterly)

Support for renewable energy was higher for people educated to degree level (93%, compared with 86% of those with other qualifications and 75% of people with no qualifications). Men were more likely to strongly support renewable energy (53%, compared with 46% of women).

# Support for different types of renewables

A further question on the level of support for different types of renewable energy is asked bi-annually and was last asked in Autumn 2021.

In Autumn 2021, the level of support for different types of renewable energy developments was variable (Figure 2.1). At least eight in ten were supportive of solar energy (90%), wave and tidal energy (85%), off-shore wind (84%), and on shore wind (80%), while support for biomass was slightly lower (72%). However, where support was lower, this was mainly driven by larger proportions saying they had no opinion. Opposition remained low across all renewable energy technologies (between 1% and 7%).

**Figure 2.1: Whether support use of specific renewable energy developments (based on all people), Autumn 2021**

RENEW2SUPPORTA-RENEW2SUPPORTE. Generally speaking, do you support or oppose the use of the following renewable energy developments ...

\*Biomass fuller wording: this refers to any plant or animal-based material (for example food waste, branches, sawdust) or purposely grown crops which can be burned to produce heat and electricity

Base: All wave respondents – Autumn 2021: Solar (5,498), wave and tidal (5,482), off-shore wind (5,490), on-shore wind (5,509), Biomass (5,470) (Asked Biannually)

Men were more likely than women to strongly support all types of renewable energy: solar (59% compared with 51%); wave and tidal (57% compared with 43%); off-shore wind (55% compared with 42%); on-shore wind (44% compared with 34%); and biomass (32%, compared with 29%). Similarly, those educated to degree level were more likely than those without a degree to say they strongly supported each of these five types of renewable energy.

# Awareness and support for fusion energy

Questions on awareness and attitudes towards fusion energy were last asked in Autumn 2021.

In Autumn 2021, respondents were provided with the following explanation ‘*Fusion energy is an experimental technology that works by fusing together atoms in order to release energy. The UK is exploring whether this technology could be used to generate zero carbon electricity.*’ Three in five (62%) of people had at least some knowledge of fusion energy before the interview (see Figure 3.1). This comprised 15% knowing a lot or a fair amount, 22% knowing a little, and 25% saying they had heard of it, but knew hardly anything about it.

**Figure 3.1: Knowledge about fusion energy (based on all people), Autumn 2021**

FUSIONKNOW. Fusion energy is an experimental technology that works by fusing together atoms in order to release energy. The UK is exploring whether this technology could be used to generate zero carbon electricity. Before today, how much, if anything, did you know about fusion energy?  
 Base: All wave respondents – Autumn 2021 (5,558)

Men were much more likely to be aware of fusion energy (77% compared with 49% of women) and to say they knew at least a fair amount about it (25% compared with 6% of women).

People aged 16 to 24 were most likely to be aware of fusion (70% compared with 57% of people aged 65 or over). Those aged 16 to 24 were also more likely to say they knew at least a fair amount about it (24% compared with 10% of those aged 65 or over).

As for other energy technologies, awareness of fusion energy was also higher for those educated to degree level (75% compared with 43% of people with no qualifications) and there was a similar pattern in reported levels of knowledge (23% of degree-educated people saying they knew at least a fair amount, compared with 7% of people with no qualifications).

When asked whether they supported or opposed developing fusion energy technology in the UK, over half (56%) gave a non-committal response: 38% neither supported nor opposed it and 18% did not know whether they supported it (Figure 3.2). This uncertainty is likely to reflect the low overall awareness and knowledge of fusion energy. However, where an opinion was provided, there was more support than opposition. In total, 39% said they supported the development of fusion energy, while only 4% opposed it.

**Figure 3.2: Whether support fusion energy (based on all people), Autumn 2021**

FUSIONSUPPORT. From what you know, or have heard about fusion energy, do you support or oppose the UK developing this technology?  
 Base: All wave respondents – Autumn 2021 (5,555)

Men (55%, compared with 25% of women) and degree educated people (49%, compared with 31% of those with no qualifications) were more likely to support fusion energy.

# Awareness and support for shale gas

Questions on awareness and attitudes towards shale gas were last asked in Autumn 2021.

In Autumn 2021, 87% of people had at least some previous knowledge of hydraulic fracturing for shale gas otherwise known as 'fracking', where this was described to respondents as follows: *'Shale gas is natural gas found in shale, a type of rock which does not allow the gas to escape. Hydraulic fracturing or "fracking" is a process of pumping water at high pressure into shale to create narrow fractures which allow the gas to be released and captured. The gas can then be used for electricity and heating.'*

Over a third (37%) said they knew a lot (8%) or a fair amount (30%) about it, while nearly half (49%) said they knew a little (35%) or hardly anything about it (14%) (Figure 4.1).

**Figure 4.1: Knowledge about fracking (based on all people), Autumn 2021**

FRACKKNOW. Shale gas is natural gas found in shale, a type of rock which does not allow the gas to escape. Hydraulic fracturing or “fracking” is a process of pumping water at high pressure into shale to create narrow fractures which allow the gas to be released and captured. The gas can then be used for electricity and heating. Before today, how much, if anything, did you know about hydraulic fracturing for shale gas, otherwise known as 'fracking'?

Base: All wave respondents – Autumn 2021 (5,559)

Men were more likely to say they were aware of fracking (92% compared with 82% of women) with a more marked difference in the proportion of men saying they knew at least a fair amount (48% compared with 27% of women).

Awareness of fracking was also higher among older people (Figure 4.2): 93% of those aged 55 or over compared with 77% of those aged 16 to 34. There was a similar age pattern in terms of the proportion who knew at least a fair amount about fracking: 43% of those aged 65 and over, declining through the age groups to 30% of 16 to 24s.

**Figure 4.2: Knowledge about fracking (based on all people), by age, Autumn 2021**

FRACKNOW. Shale gas is natural gas found in shale, a type of rock which does not allow the gas to escape. Hydraulic fracturing or “fracking” is a process of pumping water at high pressure into shale to create narrow fractures which allow the gas to be released and captured. The gas can then be used for electricity and heating. Before today, how much, if anything, did you know about hydraulic fracturing for shale gas, otherwise known as ‘fracking’?

Base: All wave respondents – Autumn 2021: 16 to 24 (332), 25 to 34 (686), 35 to 44 (655), 45 to 54 (774), 55 to 64 (905), 65 or over (2,170)

People educated to degree level were more likely to be aware of fracking (91% compared with 78% of people with no qualifications), and to know at least a fair amount about it (49% compared with 25%).

In Autumn 2021, opposition to fracking clearly outweighed support (Figure 4.3). In total 17% said they supported shale gas extraction, including just 4% of people expressing strong support. On the other hand, 45% said they opposed it, including 22% of people who strongly opposed it. However, levels of indecision were high, with three in ten people (30%) saying they neither supported nor opposed fracking.

**Figure 4.3: Whether support fracking (based on all people), Autumn 2021**

FRACKSUPPORT. From what you know, or have heard, about extracting shale gas to generate the UK's heat and electricity, do you support or oppose its use?  
 Base: All wave respondents – Autumn 2021 (5,556)

Those educated to degree level were more likely to oppose fracking (56% compared with 43% of those with other qualifications and 31% of people with no qualifications).

# Awareness of small modular reactors

A question on awareness of small module reactors was last asked in Autumn 2021.

In Autumn 2021, 46% of people said they had heard of small modular reactors before the interview, described as ‘...new types of nuclear reactors, similar to existing nuclear power stations, but on a smaller scale. They can be used for electricity generation, to provide industry with heat and power, or to provide energy to UK communities not connected to the national gas grid’. However, only 7% said they knew at least a fair amount about them and 39% said they knew only a little or hardly anything (Figure 5.1). Over half (54%) had never heard of them.

**Figure 5.1: Knowledge about small modular reactors (based on all people), Autumn 2021**

SMRKNOW. The next question is about Small Modular Reactors. These are new types of nuclear reactors, similar to existing nuclear power stations, but on a smaller scale. They can be used for electricity generation, to provide industry with heat and power, or to provide energy to UK communities not connected to the national gas grid. Before today, how much, if anything, did you know about Small Modular Reactors?  
 Base: All wave respondents – Autumn 2021 (5,548)

Men were considerably more likely to be aware of small modular reactors (57% compared with 35% of women). Awareness was also higher for those educated to degree level (54% compared with 34% of people with no qualifications).

# Attitudes towards nuclear energy

In Winter 2021, people were asked whether they agreed or disagreed with four statements in relation to nuclear energy.

For each of the four statements, the proportion of respondents who gave a non-opinion response - that is 'neither agree nor disagree' or 'don't know' - ranged from 43% to 55%, pointing to a substantial degree of uncertainty in attitudes in relation to nuclear energy (Figure 6.1).

Amongst those who gave an opinion for each statement, the public were more positive than negative about nuclear energy. Overall:

- 48% agreed (either strongly or slightly) that nuclear energy provides a reliable source of energy in the UK (compared with 9% who disagreed)
- 43% agreed that nuclear energy will help combat climate change in the UK (compared with 11% who disagreed)
- 33% agreed that nuclear energy offers affordable energy for the UK (12% disagreed)
- 29% agreed that nuclear energy provides a safe source of energy in the UK (25% disagreed)

**Figure 6.1: Attitudes towards nuclear energy (based on all people), Winter 2021**

NUCATTANUCATTD. The next questions are about nuclear energy. How much do you agree or disagree with the following statements?

Base: All wave respondents – Winter 2021: Nuclear energy provides a reliable source of energy in the UK (3,669), Nuclear energy will help combat climate change in the UK (3,683), Nuclear energy offers affordable energy for the UK (3,668), Nuclear energy provides a safe source of energy in the UK (3,670)

Overall, a fifth (20%) of people agreed with all four of these statements. Those most likely to agree with all four statements included men (27%, compared with 14% of women) and those educated to degree level (25%, compared with 19% of those with other qualifications and 18% of those with no qualifications).

In Winter 2021, 37% of the public supported using nuclear energy for generating electricity in the UK (Figure 6.2). This comprised 24% who supported it and 13% who strongly supported it. Overall, 14% opposed use of nuclear energy, with 6% strongly opposing it use. Around half did not give an opinion either way: 28% said that they neither supported nor opposed the use of nuclear energy, and 21% didn't know.

**Figure 6.2: Whether support nuclear energy (based on all people), Winter 2021**

NUCSUPPORT. From what you know, or have heard about using nuclear energy for generating electricity in the UK, do you support or oppose its use?

Base: All wave respondents – Winter 2021 (3,703)

Support for nuclear energy was higher among men (49%, compared with 26% of women). However, this was to a large extent related to larger proportions of women answering 'don't know'; the level of opposition to nuclear energy was the same for both genders.
