The Cyber Security Breaches Survey is an official statistic. Since 2016, it has measured the policies and processes organisations have for cyber security, and the impact of breaches and attacks. This infographic shows the key findings for UK businesses.

**Cyber attack**
A cyber-attack is a malicious and deliberate attempt by an individual or organization to breach the information system of another individual or organization. 39% of UK businesses identified a cyber-attack in the last 12 months, with 83% of these businesses reporting phishing attempts, and 26% identifying a more sophisticated attack type such as a denial of service, malware or ransomware attack.

**Incident response**
The ability to detect and quickly respond to cyber breaches will help reduce the operational, financial and reputational damage. When experiencing a cyber breach, 84% of UK businesses would inform their board, and 73% would conduct an impact assessment. However, only 19% of businesses have a written incident management plan, with qualitative findings suggesting an informal approach with reliance on internal expertise or external business partners such as IT providers.

**Vulnerability management**
Many cyber attackers exploit publicly disclosed vulnerabilities to gain access to systems and networks, and so regular updates are essential to guard against emerging vulnerabilities. 83% of UK businesses have up-to-date anti malware protection, and 39% have a policy for patch management. Additionally in the last 12 months; 35% of UK businesses have used security monitoring tools, 17% undertook a cyber vulnerability audit and 14% used threat intelligence.

For the full results, visit: Cyber Security Breaches Survey 2022
Technical note: Ipsos MORI carried out a telephone survey of 1,243 businesses (excluding sole traders) from 12 October 2021 to 21 January 2022. This included 482 businesses that identified an attack in the last 12 months. Data are weighted to represent UK businesses by size and sector. We have omitted comparisons with the 2021 results, as there is not substantial year on year change.

For further cyber security guidance for your charity, visit the National Cyber Security Centre website (www.ncsc.gov.uk).

This includes guidance covering:
- home working
- video conferencing
- encouraging cyber security discussions
All businesses

Internal activity

- **23%** Have a formal cyber security strategy

In the last twelve months...

- **33%** Have done a cyber security risk assessment
- **17%** Have carried out staff or awareness training
- **7%** Have assessed risks presented by their wider supply chain

External engagement

- **48%** of businesses have sought external information on cyber security
- **39%** Use an outsourced cyber security provider
- **38%** Have some form of cyber insurance. **5%** Have a standalone cyber policy
- **8%** of businesses has a Cyber Essentials certification

Threat landscape

- **39%** Identified a cyber attack in the last twelve months

Of these...

- **35%** Had an impact on the business
- **31%** Were attacked at least once a week
- **20%** Resulted in a negative outcome

Board engagement

- **82%** State their board sees cyber security as a high priority
- **50%** of boards discuss cyber security at least quarterly
- **34%** Have a board member with responsibility for cyber security
