I purchased my house in Berden a year ago [REDACTED]. I was not made aware of the solar development at that time. Not only will it have a catastrophic effect on my house price and lose me tens of thousands in value. It will also be very close to my house emitting tons of EMF radiation towards my kids and be fully visible from my window.

I'm also concerned, as is everyone else around here, that Uttlesford Council planning going into special measures is related to the rejection of the other huge solar farm down the road. And these 'special measures' are about getting developer revenue, with no consideration for the people of the area.
