

OTHER REGULATORY ISSUES – VERSION AT SEPTEMBER 2022

(This document may be subject to update, please check the website version from time to time)

All offshore activities that follow from successful licence award are subject to a range of statutory permitting and consenting requirements, including environmental assessment by BEIS. In considering such applications for permit or consent, advice will be routinely sought from other Government Departments and statutory nature conservation agencies such as the Joint Nature Conservation Committee (JNCC). These bodies have administrative requirements of their own. For instance, they may have defined minimum processing times; they may wish to warn applicants of other regulatory controls; or they may have concerns about certain kinds of activity at certain times of the year. To the extent that we are aware of such requirements we have set them out in this document, but it is not an exhaustive list of all issues. Against each requirement we have indicated the originating organisation(s)¹, and any queries are best addressed to them.

It is the responsibility of anyone planning oil and gas activity on the United Kingdom Continental Shelf (UKCS) to familiarise themselves with and comply with all the regulatory requirements that relate to it, and we strongly advise early consultation with all interested organisations. Failure to do so may result in the activity being delayed, or even prevented.

Section 1 – UKCS-wide issues

The notes in this Section apply to all acreage on the UKCS.

A ENVIRONMENTAL IMPACT ASSESSMENTS AND HABITATS AND SPECIES ASSESSMENTS

A1 The Offshore Oil and Gas Exploration, Production, Unloading and Storage (Environmental Impact Assessment) Regulations 2020 (SI 2020/1497) (“EIA Regulations”).

The EIA Regulations require an assessment of the environmental impact of proposed offshore projects before BEIS Secretary of State can decide whether to agree or refuse to agree to the Oil & Gas Authority (trading by the name as North Sea Transition Authority (NSTA)) granting consent. Offshore projects include the drilling of wells, the installation of pipelines and most categories of field development. If a significant environmental effect is likely a full Environmental Impact Assessment (EIA) must be carried out, including the submission of an Environmental Statement. Guidance is available at:

<https://www.gov.uk/guidance/oil-and-gas-offshore-environmental-legislation#offshore-oil-and-gas-exploration-production-unloading-and-storage-environmental-impact-assessment-regulations-2020>

A2 The Offshore Petroleum Activities (Conservation of Habitats) Regulations 2001 (SI 2001/1754) (as amended) (“Habitats Regulations”).

The Habitats Regulations make provision for the protection of a range of specific habitats and species that are important. Under the Regulations, BEIS is required to take account of the potential impact of offshore oil and gas activities on those habitats and species protected by relevant National Site Network (Natura 2000 sites) (Special Protection Areas for bird species and Special Areas of Conservation for habitats and designated marine species). There may also be a requirement to take account of the more general protection afforded to habitats and species in UK waters (e.g. strict protection measures for European Protected Species throughout their range). JNCC have provided an advice note on kittiwake survey methods for offshore installations and a signposting document containing information and resources for black-legged kittiwakes that should be used by industry in the relevant environmental applications. Guidance is available at:

¹ The acronyms used in this Note indicate authorship: “BEIS” is the Department for Business, Energy and Industrial Strategy; “JNCC” is the Joint Nature Conservation Committee; “MS” is Marine Scotland; “NRW” is Natural Resources Wales; “MoD” is the Ministry of Defence; “DEFRA” is the Department for Environment, Food and Rural Affairs; and “DfT” is the Department for Transport.

<https://www.gov.uk/guidance/oil-and-gas-offshore-environmental-legislation#conservation-of-offshore-marine-habitats-and-species-regulations-2017>

BEIS takes a precautionary approach when considering activities that could have a significant effect on such habitats and species. Further guidance is available at:

<https://www.gov.uk/guidance/oil-and-gas-offshore-environmental-legislation#offshore-petroleum-activities-conservation-of-habitats-regulations-2001-as-amended>

A3 Under the EIA Regulations and the Habitats Regulations, applications for proposed offshore projects must be supported by an environmental assessment to demonstrate that the proposed offshore activities are unlikely to have a significant adverse effect on the marine environment, protected habitats or species or the conservation objectives of a protected site, or other users of the sea. The EIA Regulations and the Habitats Regulations do not seek to prohibit proposed offshore activities but are designed to ensure that they are undertaken in an environmentally responsible way. We therefore advise applicants to contact BEIS as early as possible when planning offshore activities in all potentially sensitive areas, so that they can advise whether it is necessary to contact consultees to discuss potential implications.

A4 BEIS, as the competent authority, undertakes a Habitats Regulations Assessment (HRA) to determine if there is a potential for likely significant effect on a National Site Network. The HRA conclusions inform the BEIS Secretary of State decision on whether to agree or refuse to agree to the NSTA granting a licence for block(s) applied for in the Licensing Round. Post award, in addition to the environmental submission provided to support the relevant offshore activities, BEIS may undertake a HRA where proposed offshore activities are located in or near a National Site Network or likely to have an effect on a National Site Network or likely to have an effect on the features for which the site is designated or the site's conservation objectives. Based on the conclusions of the HRA BEIS may determine that certain activities should either not proceed or should be subject to certain conditions to avoid a significant adverse effect.

A5 Marine Conservation Zones (MCZ's) are national conservation designations introduced under the Marine and Coastal Access Act (2009), and a number of areas have been designated in waters adjacent to England, Wales and Northern Ireland for nationally important marine wildlife, habitats, geology and geomorphology. The implications of any activity in relation to marine conservation zones must be considered against the site(s)' conservation objective and General Management Approach (GMA) in the environmental application process. More information about MCZs and the site selection process is available at:

<https://jncc.gov.uk/our-work/marine-conservation-zones/>

A6 Nature Conservation Marine Protected Areas (NCMPA's).

NCMPAs are national conservation designations introduced under the Marine and Coastal Access Act (2009) (for offshore waters of Scotland) and the Marine (Scotland) Act (2010) (for Scottish territorial seas), and a number of areas have been designated for nationally important marine wildlife, habitats, geology and geomorphology. The implications of any activity in relation to the marine protected areas must be considered in any environmental assessment. More information about NCMPAs and the site selection process is available at:

<https://jncc.gov.uk/our-work/nature-conservation-mpas/>

A7 Marine Planning. Marine plans guide those who use and regulate the marine area to encourage sustainable development while considering the environment, economy and society. Applications for permit or consent must consider adopted marine plans in the environmental assessment, explaining how the marine plan would affect the proposed offshore activity and how the project will meet the objectives in the marine plan.

England: The [Marine and Coastal Access Act 2009](#) established the legal basis for marine planning. Marine Planning in England has been developed by the production of regional plans. The East Inshore and East Offshore marine plans were the first plans to be adopted in April 2014. Further information can be found at:

<https://www.gov.uk/government/publications/east-inshore-and-east-offshore-marine-plans>

The South Inshore and South Offshore marine plans were subsequently adopted in July 2018. Further information can be found at:

<https://www.gov.uk/government/publications/the-south-marine-plans-documents>

The remaining plan areas, the North East and North West Marine Plans and the South East and South West Marine Plans were adopted in June 2021 and information can be found at:

<https://www.gov.uk/topic/planning-development/marine-planning>

The devolved Governments have produced National Marine Plans.

Wales: The Welsh National Marine Plan was approved in November 2019 and more information can be found at:

<https://gov.wales/marine-and-fisheries-planning-and-strategy>

Scotland: Scotland's National Marine Plan (SNMP) was developed under the Marine and Coastal Access Act for Scottish offshore waters and the Marine (Scotland) Act in 2010 for Scottish inshore waters. The SNMP was adopted in March 2015. Further information on the SNMP can be found at:

<https://www.gov.scot/publications/scotlands-national-marine-plan/>

The Marine (Scotland) Act 2010 also set out the wider context for marine planning within Scotland, including what should be considered when creating local and regional marine plans. The Scottish Government are in the process of developing 11 regional marine plans and further information can be found at:

<http://www.gov.scot/topics/marine/seamanagement/regional>

Northern Ireland: The Marine Plan for Northern Ireland is being developed under the Marine and Coastal Access Act 2009 and the Marine Act (Northern Ireland) 2013, with the Department of Agriculture, Environment and Rural Affairs identified as the Northern Ireland Marine Plan Authority. The Draft Plan was consulted on in April 2018 and the six-year report on the marine plan process for Northern Ireland's inshore and offshore regions for the period 2015 to 2021 states that the draft Marine Plan for Northern Ireland continues to progress towards finalisation and adoption. Further information on the Marine Plan for Northern Ireland can be found at:

<https://www.daera-ni.gov.uk/articles/marine-plan-northern-ireland>

Further general guidance on marine planning in the UK and consideration of marine planning in applications can be found at:

<https://www.gov.uk/guidance/oil-and-gas-offshore-environmental-legislation#marine-and-coastal-access-act-2009>

B – SEISMIC SURVEYS, SHALLOW BOREHOLES AND DRILLING OPERATIONS

B1 Licence holders may not carry out geological surveys or undertake shallow drilling operations (boreholes <350 metres in depth) for the purpose of obtaining geological information, except with prior consent granted under the Habitats Regulations. Application for consent is made by submitting a Geological Survey application via the PETS system on the UK Energy Portal. In most cases, it will be necessary to submit an environmental assessment, including a noise assessment, to support the application. For seismic surveys and high-resolution seismic site surveys, an additional "survey close-out form" must be completed at the end of the survey. Guidance is available at:

<https://www.gov.uk/guidance/oil-and-gas-offshore-environmental-legislation#offshore-petroleum-activities-conservation-of-habitats-regulations-2001-as-amended>

B2 Anyone undertaking seismic survey will require that the survey should, as far as possible, be conducted in accordance with the most recently published JNCC guidelines for minimising the risk

of injury to marine mammals from geophysical surveys. Guideline recommendations that are considered to be essential will be included in the consent conditions and, depending on the timing and nature of the seismic survey operations, other measures may be required (e.g. to address the combined effects with noise from other activities). The current guidelines can be found at: <https://jncc.gov.uk/our-work/marine-mammals-and-offshore-industries/>

B3 There is little evidence of well-defined seasonal patterns of abundance and distribution for many cetacean species. It is therefore difficult to single out areas/times when seismic surveying would be less advisable, and it is recommended that cetacean sensitivity is assessed on a case-by-case basis for individual projects. For harbour porpoise however, with the exception of the Inner Hebrides and Minches candidate Special Area of Conservation (cSAC), the National Site Network designated for the species in UK waters may have seasonal sensitivities. The sites (or part of) were identified on the basis of high densities being prevalent in summer (April to September) or winter (October to March). Depending on the scale and type of survey being proposed, the cetacean sensitivities in the area during the period when the survey is to be undertaken and the proposed mitigation measures, there may be an additional requirement to apply for a European Protected Species licence. Guidance on the licensing can be found at: <https://www.gov.uk/guidance/oil-and-gas-offshore-environmental-legislation#conservation-of-offshore-marine-habitats-and-species-regulations-2017>

B4 Some blocks and part-blocks are, environmentally, particularly sensitive at certain times of the year – for instance, because of seabird vulnerability or fish spawning. A list of the seasonal sensitivities is summarised in **Section 2**.

B5 As part of any application for permit or consent, the applicant should confirm whether relevant organisations have been consulted, and BEIS may require evidence of the consultations and their outcome. For example, BEIS may require information relating to prior consultation with:

- the Marine Management Organisation or Natural Resources Wales (for operations to be carried out in English or Welsh Waters respectively);
- Marine Scotland (for operations to be carried out in Scottish waters);
- the Environment and Heritage Service (for operations to be carried out in Northern Irish waters);
- the Joint Nature Conservation Committee (for operations straddling, or beyond the 12nm territorial seas limit), or the inshore statutory nature conservation agencies such as Natural England, NatureScot and Natural Resources Wales;
- any fishermen's representative organisation which the fisheries liaison officer consults in accordance with the Licence condition;
- those local authorities with responsibility for the coastline adjacent to the location of the proposed offshore activity;
- other bodies with statutory responsibilities for environmental and cultural protection.

We strongly advise applicants to undertake prior consultation with organisations that might have an interest in the proposed activity, and to allow a reasonable period of time for the consultations. Further guidance can be obtained from BEIS.

B6 BEIS will aim to review applications for permits or consents within 28 days, or three to six months in cases where an Environmental Statement (Environmental Impact Assessment) is needed. Where there are significant environmental issues, it could take a lot longer to conclude. Any applicant needing a fast turn-around time should discuss with BEIS and relevant consultees as early as possible.

C - OTHER ENVIRONMENTAL APPROVALS

C1 There is a range of environmental legislation covering offshore oil and gas operation, such

as the **Offshore Chemicals Regulations 2002 (SI 2002/1355) (as amended)** which cover all use and discharge of offshore chemicals; and the **Offshore Petroleum Activities (Oil Pollution Prevention and Control) Regulations 2005 (SI 2005/2055) (as amended)** which covers all discharges of oil. Application for a permit is made by submitting a chemical permit application or oil discharge permit application via the PETS system on the UK Energy Portal. Any permit issued may include conditions imposing restrictions on the proposed operations. Guidance in relation to the environmental requirements is available at:

<https://www.gov.uk/guidance/oil-and-gas-offshore-environmental-legislation#offshore-chemicals-regulations-2002-as-amended>

<https://www.gov.uk/guidance/oil-and-gas-offshore-environmental-legislation#offshore-petroleum-activities-oil-pollution-prevention-and-control-regulations-2005-as-amended>

D - OIL SPILLS

D1 The Merchant Shipping (Oil Pollution, Preparedness, Response and Co-operation Convention) Regulations 1998 (SI 1998/1056) (as amended) require an Oil Pollution Emergency Plan to be in place before any drilling or development activity is undertaken. Such a plan, and any associated environmental submission, must contain detailed reference to the measures being taken to minimise risk of spillage during operations. Guidance in relation to the requirements is available at:

<https://www.gov.uk/guidance/oil-and-gas-offshore-environmental-legislation#merchant-shipping-oil-pollution-preparedness-response-co-operation-convention-regulations-1998>

E - FISHERIES AND OTHER USERS OF THE SEA

The Licence requires the appointment of a Fisheries Liaison Officer, and the removal of debris resulting from activities carried out under the Licence. Licensees are advised to consult Offshore Energies UK about relations with the fishing industry, as they have published guidelines for fisheries liaison.

E1 There are several important shipping routes in the UKCS. The need to safeguard navigation may restrict oil and gas activity in or near these routes. Licensees are therefore required to seek consent under Part 4A of the Energy Act 2008 by making an application via the PETS system on the UK Energy Portal before undertaking any activity that could interfere with safe navigation. Most applications will be required to be supported by a shipping intensity survey. Based on the result of consultation on the application, BEIS may refuse consent, impose conditions on any consent, or require the activity to be relocated.

Section 2 – Block-specific issues

The notes in this Section only apply to specified blocks and sub-blocks.

The appended table shows specific concerns that have been raised about each block or sub-block. Licensees should note these concerns as they could affect BEIS's decision when considering any application for permit or consent for relevant offshore activities. Where a block or sub-block appears in the table with no entries alongside, it will mean that consultees have not currently raised specific concerns, but sensitivities may be identified when project-specific details are available. Many blocks and sub-blocks are not included in these tables, but no inference should be drawn regarding their relative environmental sensitivity.

There are periods of concern in relation to seabird sensitivity to oil and proposed drilling operations. The Oil Vulnerability Index (OVI) (JNCC 1999) has recently been updated using survey data up to 2015 and an improved method to calculate a single measure of seabird sensitivity to oil pollution. The revised Seabird Oil Sensitivity Index (SOSI) has therefore been published and can be found at:

<https://jncc.gov.uk/our-work/seabird-oil-sensitivity-index-sosi/>

JNCC and BEIS have revised the periods of concern for drilling activities, based on the SOSI.

While previous recommendations were considering periods of concern when there were two or more sequential months of very high seabird vulnerability (OVI), the updated periods of concern for drilling are now defined as any single month that presents, in a given licence block, either a very high or extremely high seabird sensitivity (SOSI). Periods of concern for drilling operations based on SOSI is available at:

https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/814936/Seabird_Oil_Sensitivity_Index_SOSI_Data_and_tables.xlsx

This section is based on the most up-to-date information available. However, the assessment of environmental and navigational sensitivities can change as new information becomes available. For up-to-date advice, please consult the relevant organisation identified in the table.

Column Number 1 – Seasonal concerns: Periods during each year when one or more organisations have indicated concerns about possible environmental effects of seismic surveys or drilling operations in the block. Column 1 indicates possible concerns in relation to fish spawning and nursery areas, which may be affected by seismic activity.

It is possible that proposed activities during the sensitive periods would not be allowed to proceed. However, it may also be possible to agree appropriate mitigation measures to minimise potential adverse effects, to the extent that the recommendation is no longer relevant or potential impacts are not considered to be significant. Licensees may therefore wish to contact the relevant organisation identified in the table to discuss such measures; the outcome of these discussions should be reflected in the applications made to BEIS.

Note: A range of months is to be understood as inclusive – e.g. “April to May” means “1 April to 31 May”.

Column Number 3 – Herring spawning grounds: For blocks or sub-blocks marked **F4**, scientific fisheries advice has indicated that seabed surveys may be required before any drilling activity to confirm whether there are any herring spawning sites within a three-nautical mile radius of the proposed drilling location. Confirmation of the pre-drilling survey requirements should be discussed with the Marine Management Organisation (MMO) or Marine Scotland (MS), as geographically appropriate, and a report of the results of the survey should be submitted to the MMO (copied to Cefas) or MS for comment prior to confirmation of the drilling proposals. Based on the survey results, the MMO or MS may recommend that the drilling operation should be relocated or re-scheduled or recommend that BEIS should include additional conditions in the relevant permit or consent.

Column Number 4 – Special Conditions

Note 1: Activities in certain blocks or sub-blocks designated “See note 1” are of concern to the Ministry of Defence (MoD) because they lie within training ranges. The NSTA will attach the following special condition to any Licence covering, wholly or in part, any such block or sub-block: **“The Ministry of Defence (MoD) must be notified, at least twelve months in advance, of the proposed siting of any installation anywhere within Block(s) «Blocks», whether fixed to the seabed, resting on the seabed or floating, that is intended for drilling for or getting hydrocarbons, or for fluid injection. MoD will, within thirty days of receipt of such notification, either notify the Licensee that it is content with this location or else notify it that an MoD activity at the location would require re-siting of the installation from the requested location. In the case of potential difficulties identified either by MoD or by the Licensee, discussion should be held between the parties within three months of the original notification with a view to achieving a mutually acceptable location”.** Further information can be obtained from:

**Defence Infrastructure Organisation Safeguarding
Kingston Road
Sutton Coldfield
West Midlands
B75 7RL**

0121 311 3818

DIO-Safeguarding-Offshore@mod.uk

Note 2: Applicants for certain blocks designated “See note 2” should be aware that the Strategic Environmental Assessment (SEA) conducted in advance of the 22nd Round of Offshore Licensing recommended that “Blocks in Quadrant 217 which include the Pilot Whale diapirs (mud volcanoes) should be considered for exclusion from licensing until they are better understood (particularly the possible presence of seep chemosynthetic communities) or if licensed, should include explicit controls to avoid potentially damaging activities such as anchoring and cuttings discharge”. Although each operation will be assessed on a case-by-case basis it is anticipated that the following measures will usually apply to operations in licensed areas on or near the diapirs unless a specific waiver is given by BEIS:

- no anchoring of rigs where the anchor spread could affect the diapirs;
- no drilling of wells through the diapirs;
- no cuttings from surface hole section(s) to be discharged on the diapirs. No discharge of mud or cuttings from lower hole sections if deposition on the diapirs is likely;
- no pipeline to be trenched through the diapirs; and
- no installation to be sited on the diapirs.

In addition, early consultation on proposed activities must be undertaken with BEIS and JNCC (and others as directed) to identify and discuss any site-specific requirements including information gaps which may require survey work.

Note 3: Applicants should be aware that for certain blocks there may be leases or licences issued to one or more companies by The Crown Estate or Crown Estate Scotland, or current applications for such leases or licences, for the purposes of gravel extraction (referred to by The Crown Estate as “Marine Mineral Activity”), Windfarms (also see Note 4 below), carbon dioxide storage, gas storage or Cables and Pipelines. Potential oil and gas licence applicants should contact the relevant companies concerned as advised by The Crown Estate or Crown Estate Scotland. This is in order to ensure that oil and gas activity that applicants propose to undertake within the block is in co-operation with the relevant lease holders or licence holders. A map of the latest lease and licensed areas can be accessed from The Crown Estate and Crown Estate Scotland website at:

<https://www.thecrownestate.co.uk/en-gb/what-we-do/on-the-seabed/>

<https://www.crownestatescotland.com/what-we-do/marine>

Note 4: Applicants should be aware that areas within certain blocks may be the subject of plans or proposals for the development of windfarms, other renewable energy projects or marine works e.g. the area may have been leased by The Crown Estate or Crown Estate Scotland for a windfarm development, or an application has been submitted for such a lease and is awaiting agreement.

The Crown Estate - A map of the latest leased or licensed areas can be accessed from The Crown Estate website at:

<https://www.thecrownestate.co.uk/en-gb/what-we-do/on-the-seabed/>

The Government believes that the renewables industry and the oil and gas industry can successfully co-exist to ensure the nation’s energy needs are met. This is no less so in areas where oil and gas licences and proposed or actual windfarm sites overlap. However, we advise that potential applicants on such blocks should make early contact with the holders of any relevant windfarm lease or Agreement for Lease (AfL), or the relevant zone developer(s), and establish in good time a mutual understanding of the respective proposals and time frames envisaged (acknowledging that not all aspects of the future plans of either side will necessarily be definitively decided at that time).

In the very unlikely event that it proves impossible to access an oil or gas find without an adjustment to an existing or proposed windfarm, this would be a matter for commercial negotiations between the companies involved. In exercising or performing functions and duties

arising under the Petroleum Act 1998 or related environmental legislation (such as considering an application for drilling, the conduct of seismic surveys or the construction of field development infrastructure including the laying of pipelines), the NSTA or the Secretary of State may have regard to existing and proposed windfarm developments. Decisions would take into account whether there had been effective discussions between the parties and whether a reasonable commercial solution (including the provision of compensation) had been proposed to the windfarm owner. Provisions in a windfarm lease or Agreement for Lease enable the determination (i.e. removal) of all or part of the lease or Agreement for Lease area where this is necessary to enable an oil or gas development to proceed. The Ministerial Statement of 12 July 2011 sets out the circumstances in which the NSTA or the Secretary of State would ask The Crown Estate to determine the lease or Agreement for Lease and is available at:

https://www.gov.uk/government/uploads/system/uploads/attachment_data/file/318704/Crown_Estate_Lease_Independent_Valuer_Guidance.pdf

However, we would expect that, with good planning, the respective activities can be phased and coordinated so that both can proceed with minimal compromise and without affecting any part of an existing lease or Agreement for Lease.

Further information regarding offshore renewable energy projects can also be found on the National Infrastructure Planning web page at:

<https://infrastructure.planninginspectorate.gov.uk/>

Crown Estate Scotland - As well as managing leasing of the seabed of Scotland out to 12 nautical miles, Crown Estate Scotland also hold the rights to offshore renewable energy and carbon and gas storage out to 200 nautical miles from the shore. Within the 12 nautical mile limit, Crown Estate Scotland award and manage leases for telecommunication and electricity cables, oil and gas pipelines, offshore renewable energy projects, fish farms and ports & harbours. Further information can be found at:

<https://www.crownestatescotland.com/what-we-do/marine>

Note 5: Applicants should be aware that parts of Blocks 15/20 and 15/25 (Scanner pockmark SAC) and Blocks 9/28 and 16/3 (Braemar pockmark SAC) were withheld from licensing after the 2002 SEA as they contain some of the best UK examples of seabed pockmarks and associated Annex 1 habitat (submarine structures made by leaking gases). These features have now been accepted as Special Areas of Conservation. These blocks can be licensed but conditions will be attached to licences to protect the sensitive features. These conditions are:

- no drilling will be permitted through the shallow gas accumulations supplying the pockmarks or through the migration pathways to them;
- the applicant will liaise with the JNCC in advance of any activities within the block(s); and
- in advance of making any consent decisions, BEIS will undertake a HRA of the potential effects of the proposed activity(ies) on the protected site to determine if the activity(ies) are likely to have a significant effect on the site integrity (either alone or in combination with other plans or projects).

Note 6: Applicants should be aware the MoD's defence related operations in blocks marked "See note 6". Any licence granted for these blocks will specify that no surface drilling or infrastructure development may occur within the block, which means that the subsurface will only be accessible from adjacent areas. Further information can be obtained from:

North Sea Transition Authority

Licensing_Round@nstauthority.co.uk

Note 7: Applicants should be aware that blocks marked "See note 7" are within a designated MoD "Danger Area" used by military aircraft as a firing/bombing range which is protected by a by-law giving the MoD rights in relation to denying the presence and activities of persons and vessels, including oil and gas installations, within the area. Whilst the MoD will work with oil and gas companies to enable exploration and development where it is able to accommodate those activities, due to the current and past usage of the area it cannot be assumed that the MoD will

necessarily agree to operations or the presence of facilities at any given location, within this area, or at any given time. Potential applicants should be aware of these constraints when applying for relevant blocks. Further information can be obtained from:

Defence Infrastructure Organisation Safeguarding

**Kingston Road
Sutton Coldfield**

West Midlands

B75 7RL

0121 311 3818

DIO-Safeguarding-Offshore@mod.uk

Note 8: Applicants should be aware that, based on the most up-to-date information received from The Coal Authority, blocks marked "See note 8" are close to areas that are subject to Coal Authority licences for Underground Coal Gasification, or to applications for such licences. To check the latest position, or to seek further information about these areas, please contact the Coal Authority at:

<http://coal.decc.gov.uk/en/coal/cms/contact/contact.aspx>

Note 9: This block is within a designated MoD "Danger Area" used by the military as a firing/bombing range, for missile firing and exercises. Petroleum production may be undertaken, in this block, subject to obtaining prior approval from the MoD on the location and type of production installations and associated infra-structure to be used no less than 12 months prior to deployment. All associated works and survey activities will need to be approved by the MoD and coordinated with MoD range activities. Further information can be obtained from:

Defence Infrastructure Organisation Safeguarding

**Kingston Road
Sutton Coldfield**

West Midlands

B75 7RL

0121 311 3818

DIO-Safeguarding-Offshore@mod.uk

Note 10: Applicants should be aware that, currently, no activity of any kind will be allowed in the South West corner of this block as it is within the Moray Firth SAC. Further information can be obtained from:

North Sea Transition Authority

Licensing_Round@nstauthority.co.uk

Note 11: Applicants should be aware that decommissioning operations of offshore oil and gas facilities may be planned or underway in this block. Further information can be obtained from:

<https://www.gov.uk/guidance/oil-and-gas-decommissioning-of-offshore-installations-and-pipelines#overview>

Note 12: Applicants should be aware that Highly Protected Marine Areas (HPMAs) have been proposed for designation within these blocks. Highly Protected Marine Areas (HPMAs) are areas of the sea designated for the protection and recovery of marine ecosystems. They prohibit extractive, destructive, and depositional uses, allowing only non-damaging levels of other activities to the extent permitted by international law. HPMAs will be designated under the Marine & Coastal Access Act (2009), therefore at the point of consultation which started on 6th July 2022, pilot HPMAs became of material consideration. Further information can be obtained from:

<https://jncc.gov.uk/our-work/highly-protected-marine-areas/>

TABLE OF SEAWARD BLOCKS IN QUAD and BLOCK ORDER

Block	1. Period of Concern for Seismic Surveys	3. Herring Spawning Grounds	4. Special Conditions (see "Section 2 - Block Specific Issues" Above).
1/1	January – May November - December (MS)		See note 1
1/2	January – May November - December (MS)		See note 1
1/3	January – May November - December (MS)		See note 1
1/4	January – May (MS)		See note 1
1/5	January – May (MS)		See note 1
1/6	January – May November - December (MS)		
1/7	January – May November - December (MS)		See note 1
1/8	January – May November - December (MS)		See note 1
1/9	January – May (MS)		See note 1
1/10	January – May (MS)		See note 1
1/11	January – May November - December (MS)		See note 1
1/12	January – May November - December (MS)		See note 1
1/13	January – May November - December (MS)		See note 1
1/14	January – May November - December (MS)		See note 1
1/15	January – May November - December (MS)		See note 1
1/16	January – May November - December (MS)		See note 1
1/17	January – May November - December (MS)		See note 1
1/18	January – May November - December (MS)		See note 1
1/19	January – May November - December (MS)		See note 1
1/20	January – May November - December (MS)		See note 1
1/21	January – May November - December (MS)		See note 1
1/22	January – May November - December (MS)		See note 1

Block	1. Period of Concern for Seismic Surveys	3. Herring Spawning Grounds	4. Special Conditions (see "Section 2 - Block Specific Issues" Above).
1/23	January – May November - December (MS)		See note 1
1/24	January – May November - December (MS)		See note 1
