Department for Education

# 16 to 18 accountability measures

## Technical guidance

**February 2025**

# Contents

# Summary

The department publishes performance measures for schools and colleges with provision for 16 to 18 year olds on the [Compare School and College Performance](#) service. This guidance sets out what these measures are and how we have calculated them for students completing 16 to 18 study in the 2023 to 2024 academic year.

# Expiry or review date

This guidance will be reviewed by February 2026.

# Who this publication is for

This guidance is for:

- School and college leaders, school and college staff and governing bodies in all maintained schools, academies and free schools with a sixth form, sixth form colleges and general further education colleges.
- Local authorities.
- Other users of 16 to 18 performance measures.

# Headline performance measures for the 2023 to 2024 academic year

We will produce and publish the following headline performance measures for students completing 16 to 18 study in the 2023 to 2024 academic year:

- **16 to 18 value added (progress) measures:** these measures show how well students did in their qualifications compared to other students with similar prior attainment nationally. This is the first time we have been able to produce these measures since 2018 to 2019, due to impacts of the COVID-19 pandemic. For more information, see the section on value added measures.
- **Attainment measures:** the headline attainment measures show the average point score (APS) per entry, also expressed as an average grade. For more information, including on additional attainment measures, see the section on attainment measures.
- **Retention measures:** the headline retention measures show the percentage of students retained to the end of the core aim of their study programme. For more information, including on additional retention measures, see the section on retention measures.

In 2024, we have also published the following headline performance measures for students that completed 16 to 18 study in the 2021 to 2022 academic year:

- **Destination measures:** the headline destination measure shows the percentage of students that progress to a sustained education, training or employment destination after 16 to 18 study (and associated breakdowns of this information). For more information, including on additional destination measures, see the section on destination measures.

We will publish some additional information on the Compare School and College Performance service, including subject entries information and Apprenticeship Qualification Achievement Rates. Please see the relevant sections for more information.

We will also publish performance measures for:

- **Disadvantaged students** – headline measures broken down for disadvantaged students only. See the section on measures for disadvantaged students.
- **Multi-academy trusts (MATs)** – school and college level measures aggregated up to MAT level, for eligible MATs. We will publish headline progress (16-19 value added) and attainment (APS) measures at MAT level this year. See the section on Multi-Academy Trust measures.

We will not publish **English and maths progress measures** for students completing 16 to 18 study in the 2023 to 2024 academic year.

When published previously, these measures showed, for students that did not achieve a grade 4 or above in English or maths GCSE at KS4, how much progress students made between their KS4 GCSE result and any re-takes they did in English or maths GCSE or equivalent at 16 to 18.

We will not publish the English and maths progress measures as too many students in scope would still have KS4 prior attainment data from summer 2021, which the previous government committed not to use in performance measures. A high number of students would still have KS4 prior attainment date from summer 2021 because of the high proportion of students in scope for this measure that take three years to complete their 16 to 18 study.

We intend to return to producing and publishing the English and maths progress measure as soon as possible, which will be for students completing 16 to 18 study in the 2024 to 2025 academic year at the earliest. More information will be confirmed in due course.

More information can be found in the section on English and maths measures.

# How will performance data for the 2023 to 2024 academic year be used?

Users of education school and college performance data will need to consider this data alongside a range of other information about a school or college and its individual circumstances, for example by speaking to a school or college directly. Conclusions should not be drawn on a single piece of data alone.

Department for Education (DfE) officials may use 2023 to 2024 16-18 performance data when setting criteria to allocate additional funding.

As set out in DfE guidance[1], school, college and trust leaders should not make pay progression for teachers dependent on the assessment data for a single group of students. Performance management targets relating to student performance should not be used in isolation and other factors should also be taken into account.

## Ofsted

As set out in Ofsted's inspection handbooks, Inspectors will use nationally published school and college performance data as a starting point on inspection, where it is available. National assessments and examinations are useful indicators of students' outcomes, but they only represent a sample of what students have learned. Inspectors will consider any outcomes data, where this is available in nationally published data, but it does not constitute a substitute for inspectors' first-hand inspection activities.

## DfE Regional Directors

DfE regional Directors will have 2023 to 2024 assessment, test and exam results data to refer to. Decisions will not be made on a single year's data and will continue to be informed by a range of factors. 2023 to 2024 16-18 school and college performance data can be used to make comparisons between schools/colleges, trusts and with local authority and national averages, and, where data is available, can be considered alongside data from 2022 to 2023, as the approach to grading was consistent across years.

---

[1] School teachers' pay and conditions: guidance - GOV.UK (www.gov.uk)

# Schools and colleges included in 16 to 18 performance measures

Schools and colleges in England with 16 to 18 study provision are generally included in performance measures. However, we do not include performance measures for:

- training providers;
- independent FE colleges, adult education colleges, special colleges;
- higher education institutions with 16 to 18 provision;
- international schools, hospital schools, Pupil Referral Units.

For special schools, we only include those that have opted in – see below.

## Independent schools

We calculate and publish progress and attainment measures for independent schools, using information sourced from awarding bodies.

Retention measures are not calculated for independent schools because the department does not have access to the relevant data.

We do not produce school-level destination measures for independent schools due to more limited information on students causing low coverage. Independent schools are similarly excluded from the national and local authority comparator figures. They are however included at national and institution level in the destination measures statistical release.

Disadvantaged measures are not calculated for independent schools.

## Special schools

Students who need more specialised teaching and facilities may go to special schools. Special schools with sixth form students can currently choose to have their results included in the 16 to 18 performance measures. Even if they opt-in, some special schools will have no results published for their students because they do not take the qualifications reported in these tables.

# Students included in 16 to 18 performance measures

Students are eligible to be included in 16 to 18 performance measures if they are of academic age 16, 17 or 18 at the start of the 2023 to 2024 academic year (31 August 2023) and at the end of their 16-18 studies. They are identified as being at the end of 16-18 study when they first meet at least one of the following criteria:

a) they have entered for at least 2 qualifications, each of which is at least the size of an A level or they have entered for at least 1 qualification the size of at least 2 A levels, in the reporting year; OR

b) they have entered for both a T Level core and T Level occupational specialism during 16 to 18 study (T Level measures are not yet published on CSCP, but this rule is already applied to produce a normal cohort when reporting on CSCP begins, and to ensure other student cohorts that are published on CSCP are correct), OR

c) they are 18 at the start of the reporting year and have not been reported in 16 to 18 performance measures at their current allocated school or college.

Prior to 2021, we also used a third inclusion rule where a student would be triggered for inclusion if they had been allocated to the same school or college for the last two years. We have removed this criteria to reduce the burden on schools and colleges where large numbers of students complete 16 to 18 study in their third year. Previously, schools and colleges would have had to spend a lot of time removing these students from the cohort during the data checking exercise. Students will still be triggered for reporting after two years if they meet either of the other criteria above.

This change will also ensure that when students' results are reported, this includes the extent of their 16 to 18 study and reduce the chances of us reporting them before they have completed 16 to 18 study.

Schools or colleges will still be able to defer students who meet criteria a) or b) but who are continuing their 16 to 18 study, as part of the checking exercise, as long as the student has not reached age 18 before the start of the reporting year.

Please note a student eligible for reporting in 16 to 18 performance measures will also need to meet criteria for each performance measure to be included in that measure. For example, to be included in the average point score per A level entry expressed as a grade, the student must have been entered for at least an AS qualification.

# Allocation of students to schools and colleges

Results are allocated on an annual basis to the school or college where the student has enrolled to take their main programme of study, as recorded in the school census or Individualised Learner Record (ILR). All results taken in that year will be allocated to the main school or college, irrespective of where they were taken.

There are three possible sources of information to consider, each year:

- **schools that return the spring school census** – the spring school census returns student level information and is used to identify 16 to 18 students on-roll in state-funded schools;
- **colleges that return the ILR** – the ILR returns student level information and is used to identify 16 to 18 students 'on-roll' in colleges (and other provider types returning the ILR); determined by where the student studied their main course of study. Outcomes related to additional courses recorded on the ILR, which may include those delivered by a different school or college, are also reported against the 'core' college since they are responsible for that student's overall study programme; and
- **awarding organisation data[2] (for schools or colleges that do not return the spring school census or ILR)** – for schools or colleges which do not return student level information to the department i.e. independent schools, we use awarding organisation data to allocate results to schools and colleges but on an annual basis.

On completion of 16 to 18 study, outcomes are reported against one, two or three schools or colleges, reflecting the study and achievements of the student in the year(s) they were allocated to that particular school or college.

The following section sets out the rules in practice using these data sources, including some worked examples.

---

[2] Awarding organisations (AOs) deliver regulated qualifications and award examination results to students in post-16 study. Each year, the department collects data from AOs, via an external contractor, on the students who have entered exams and their results.

# Allocation rules and worked examples

The tables below shows how a student will be allocated to one or more schools or colleges based on the three data sources that we use to determine allocation.

**Table 1a: Allocation of a student to a school or college**

| | Spring School Census | Individualised Learner Record (ILR SN10 for report year, SN14 for previous years) | Awarding Organisation Data |
|---|---|---|---|
| If students are reported once, select school or college based on: | Where the student is recorded as on-roll in the spring school census. | Where the student is recorded as studying a main course of study/core aim which is 16 to 19 funded and is level 3 or below. | Where the student is recorded as having sat their exams. |
| If students are returned multiple times in the same data source: | School selected prioritising enrolment status of 'current', then 'main', then 'subsidiary'. If the enrolment status is the same, the school with the highest volume of entries (from awarding organisation data) will be selected. | Where two or more courses are recorded in different colleges, the following hierarchy is used to select the college:<br>1. Aim started before 1 May<br>2. Latest start date<br>Where there are concurrent courses of study:<br>3. Largest course of study<br>4. Earliest start date<br>5. Latest end date | School or college with the highest volume of exams (based on size) will be selected |

**Table 1b: Allocation of a student to a school or college**

| | Spring school census, Individualised Learner Record and/or Awarding Organisation Data |
|---|---|
| If students are returned in multiple data sources: | • If students are reported in both the spring school census and the ILR: The ILR record (a college) will be selected when the student has an enrolment status of subsidiary at the school or is retained in their main course of study and the college either had the highest volume of exam results, or started their main course of study after the date of the spring school census (but before 1st May). Otherwise, the spring school census (a school) will be selected.<br>• If students are reported in both the ILR and Awarding Organisation data, where a student did level 3 qualifications mainly in an independent school and small qualifications in a college, the independent school will be selected.<br>• If students are reported in both the spring school census and Awarding Organisation data: State-funded school with 'main' or 'current' enrolment status is chosen; but if 'subsidiary' or hospital school then independent school is selected based on AO data. |

If the same college or school was selected in all years of post-16 study, then all the student's outcomes will be reported against this one school or college. However, if different schools or colleges were selected using the principles above, only the outcomes achieved in that year are reported against the school or college.

The following examples show some common scenarios and how results are reported against each school or college.

**Scenario 1: A student is taking an academic pathway but moves from a school to a college between AS and A levels**

On completing 16 to 18 study in year 13, the student's outcomes are reported:

| Year 12 | Year 13 |
|---|---|
| School A: 4 AS levels | College B: 3 A levels (in same subject as 3 AS levels) |

AS level achievement allocated to school A

A level achievement allocated to college B
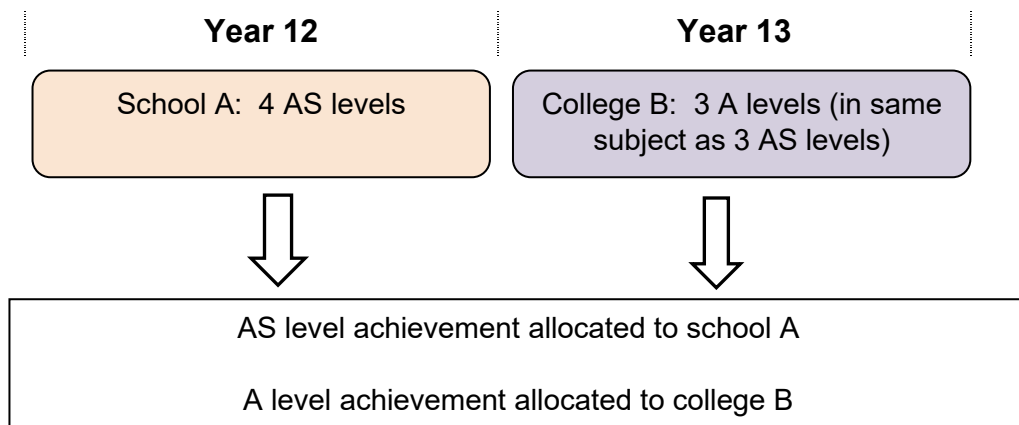

**Scenario 2: A student starts on an academic pathway but moves to another academic pathway and moves college**

On completing 16 to 18 study in year 14 or by age 18 outcomes are reported:

| Year 12 | Year 13 | Year 14 |
|---|---|---|
| College A: 3 AS levels | College B: AS levels (year 13) and A levels (year 14) | |

AS level (year 12) achievement allocated to college A

AS and A level achievement allocated to college B, reporting subject to discounting
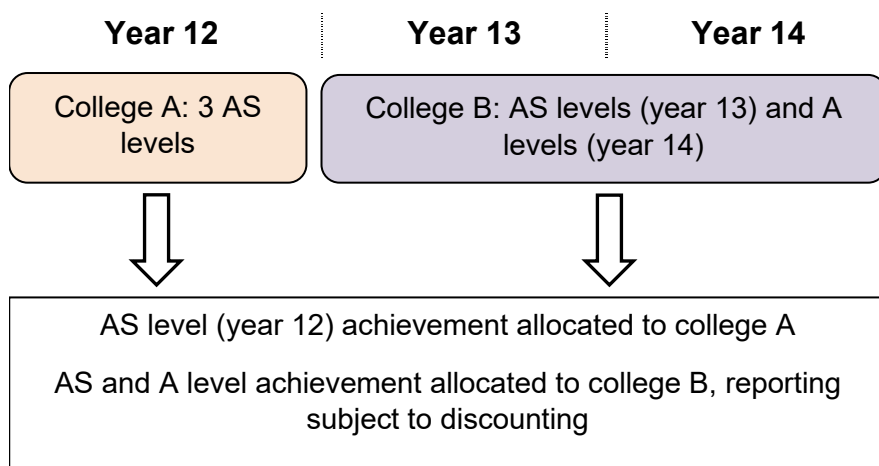

**Scenario 3: A student starts on an academic pathway but moves to a vocational pathway and moves schools**

On completing 16 to 18 study in year 14 or by age 18 outcomes are reported:

| Year 12 | Year 13 | Year 14 |
|---|---|---|
| School A:3 AS levels | School B:2 Applied General qualifications (AGQs) | |

AS level achievement allocated to school A

Applied General achievement allocated to school B

14
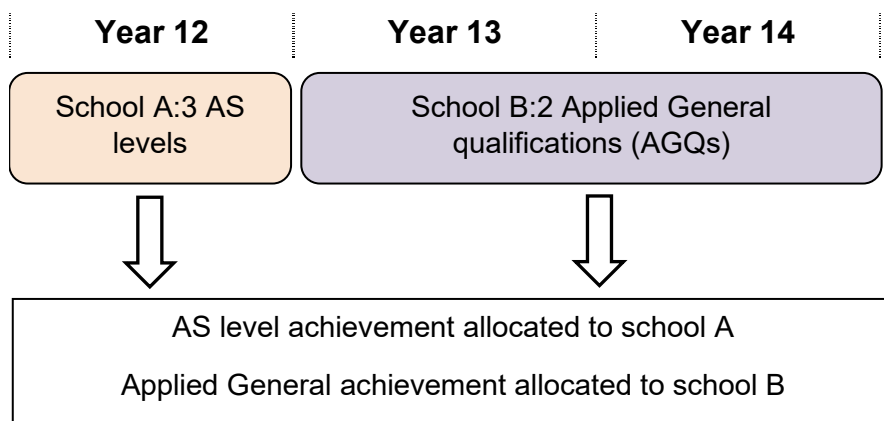

**Scenario 4: A student starts on an academic pathway but leaves partway through**

At reaching the age of 18 or requesting the student be included in performance measures early via the checking exercise outcomes are reported:

**Year 12**

School A: 4 AS levels

⇩

AS level achievement allocated to school/college A
**Scenario 5: A student studies in 2 different colleges in the same academic year**

A college is selected using DfE allocation rules – see table 1 above.  All their results are attributed to a single college, including any results studied elsewhere.  This may mean qualifications not offered by the allocated college are reported against them.

**Year 13**

College A: 2 Applied General qualifications (AGQs)

College B: 1 A level

⇩

Applied General achievement allocated to college B

One A level achievement allocated to college B
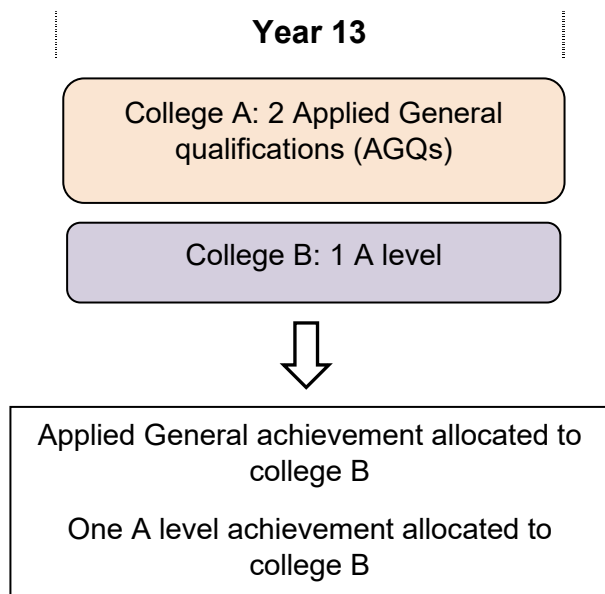

To note: in this scenario the student will be included against college A and B for the retention measures based on the core aim at each college.

**Scenario 6: A student attends a school in the first year but takes no exams and then takes an academic pathway at a different school**

On completing 16 to 18 study in year 14 or by age 18 outcomes are reported:

| **Year 12** | **Year 13** | **Year 14** |
|---|---|---|
| School A: | School B: AS levels (year 13) and A levels (year 14) | |

There are no attainment measures to report, but the retention measure will be reported against school A

AS and A level achievement allocated to school B
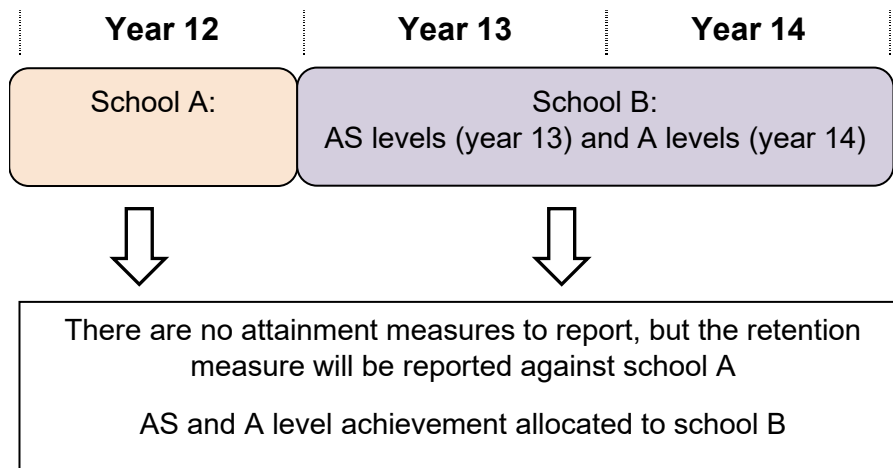

# Qualifications and performance points

## Qualifications included

A list of qualifications recognised in performance measures is published on gov.uk: https://www.gov.uk/government/publications/16-to-19-qualifications-discount-codes-and-point-scores

The list of qualifications included in performance measures for a particular reporting year (i.e. 2023 to 2024) is usually first published around 2 to 3 years in advance, i.e. before the student has started studying the qualification.

## Cohorts

Progress, attainment and retention measures are published separately by cohort[3], so that you can see separately the outcomes for the different types of qualifications taken in a school or college.

The level 3 cohorts in 16 to 18 performance measures are:

- A level
- Academic (the A level cohort is a subset of this, so the academic cohort includes A level outcomes as well as the outcomes of other academic qualifications)
- Applied general
- Tech level

At level 2, there is only one cohort, for technical certificate outcomes.

All qualifications that count in 16 to 18 performance measures are one of these qualification types, and are listed as such in the link above.

### A level

To be included in the A level performance cohort for a school or college, the student must have been entered for at least one of the following qualifications in the academic years they have been allocated to that school or college:

- GCE A level
- Applied GCE A level single award
- Applied GCE A level double award

---

[3] Progress measures are also normally published by cohort, but we will not publish progress measures for the 2021 to 2022 academic year or the 2022 to 2023 academic year performance measures cohorts.

- GCE AS level
- Applied GCE AS level single award
- Applied GCE AS level double award

## Academic

The A level category is a subset of the academic category. Therefore, the qualifications listed above will also be reported as academic qualifications.

To be included in the academic performance cohort for a school or college, the student must have entered for one of the following qualifications, which must be equivalent in size to at least 0.5 A levels with the exception of the extended project, which although smaller is still included.

- GCE A level
- Applied GCE A level single award
- Applied GCE A level double award
- GCE AS level
- Applied GCE AS level single award
- Applied GCE AS level double award
- International Baccalaureate Diploma (IB)
- IBO Standard level component
- IBO Higher level component
- IBO Diploma Theory of Knowledge, Extended Essay and Reflective Project*
- Pre-U Principal Subject
- Pre-U Short Course Subject
- Pre-U Diploma
- Extended Project (Diploma)
- Advanced Extension Award
- Core Maths Qualifications at level 3
- Free standing Maths Qualification level 3 (FSMQ)*

*These qualifications are too small to cause inclusion in the academic performance cohort on their own; however, they are still counted if students have entered other qualifications on this list.

## Applied general and tech level

The lists of vocational and technical qualifications that count in performance measures can be found here: https://www.gov.uk/government/publications/16-to-19-qualifications-discount-codes-and-point-scores

To be included in the applied general or tech level performance cohort, the student must have entered for at least one of these qualifications in the academic years they have been allocated to that school or college.

T Levels are a new course, which for the purpose of performance measures do not count as either an applied general or tech level qualification. For more information on T Level performance measures, see the T Level section of this guidance.

## Technical certificates (level 2)

The lists of qualifications that count in performance measures can be found here: https://www.gov.uk/government/publications/16-to-19-qualifications-discount-codes-and-point-scores

Technical certificates are a subset of level 2 vocational qualifications. All technical certificate qualifications that count in performance measures are at least equivalent in size to two GCSEs (minimum 145 guided learning hours), and often larger.

To be included in the technical certificate performance cohort, the student must have entered for at least one of these qualifications in the academic years they have been allocated to that school or college.

# Discounting

Discounting is applied to progress and attainment measures at 16 to 18. Discounting is primarily about ensuring that where a student has taken more than one qualification in the same subject area, performance measures only give credit to institutions once for teaching a single course of study.

Fuller details on discounting can be found in the discounting guidance.

# Performance points for progress and attainment measures

Performance points for progress and attainment measures can be found here: https://www.gov.uk/government/publications/16-to-19-qualifications-discount-codes-and-point-scores

## Level 3 qualifications

The points for level 3 qualifications in progress and attainment measures are designed to allow level 3 qualifications of different sizes and grade structures to be compared, as well as to act as a good basis for calculation and statistical modelling in performance measures.

## Level 2 qualifications

The performance points at level 2 are designed to have the following properties (and can differ from the points used in KS4 performance measures):

- As per level 3 performance points, larger qualifications attract more points (size is measured relative to 1 GCSE equivalent);
- Differences in reported headline attainment measures (average point score per entry, or average grade) make intuitive sense: for most qualifications an improvement of one grade would translate to an improvement of one unit (APS per entry).

# 16-18 Value Added (progress) measures

16 to 18 value added measures show how well students did in their qualifications compared to other students with similar prior attainment nationally. We will publish 16 to 18 value added measures in the 2023 to 2024 performance measures, for the following cohorts:

- Level 3 A Level
- Level 3 Academic
- Level 3 Applied General
- Level 3 Tech Level

This is the first time we have been able to produce these measures since 2018 to 2019, due to impacts of the COVID-19 pandemic. This is also the first time we will publish value added measures for the Tech Level cohort.

We will not introduce value added measures for the Level 2 Technical Certificate cohort in 2023 to 2024 performance measures. We intend to introduce Level 2 Technical Certificate value added measures in the 2024 to 2025 performance measures, and will confirm this in due course.

We will not publish value added measures for T Level students. T Levels are a new course, different from Tech Levels. For more information see the section on T Level measures.

## Value added measures methodology

### Students included in the measure

To be included in the 16 to 18 value-added (VA) measure, a student must:

- have results at the end of key stage 4.
- have completed an academic, applied general or tech level qualification (see the section on qualifications and performance points). If they enter and fail they are included, but if they withdraw and don't enter, they are not.

### Qualifications included in the measure

Only qualifications on the academic, applied general and tech level lists (see the section on qualifications and performance points) are included in value-added measures. In addition, qualifications are only included if at least 16 eligible students, in at least five schools or colleges, have an exam result.

## How the measure works

For all students, we work out their average attainment at key stage 4 (KS4). For academic qualifications, students' prior attainment is based on their average attainment in GCSEs only. For applied general and tech level qualifications, students' prior attainment is based on all qualifications achieved at KS4.

From 2023 to 2024 value added measures onwards, qualifications in scope are those approved for reporting in key stage 4 performance measures in the academic year the student completed KS4. Each student's prior attainment will reflect the points scales used at KS4 in the academic year the student completed KS4. This is a change from the approach used in 2019 when, for all students, we took into account all KS4 qualifications approved from 2014 onwards. Simple discounting rules apply, with the best result in any subject used when calculating the average point score. Resits or additional qualifications gained during 16 to 18 are ignored.

In line with commitments made under the previous government[4], outcomes from KS4 qualifications achieved between January 2020 and August 2021 will be excluded when calculating a student's prior attainment for the 16 to 18 value added measures. Students will be included in the 16 to 18 value added measures if they have at least one outcome from KS4 qualifications achieved in the 2021 to 2022 academic year or later.

To calculate the progress made by students taking the same qualification nationally we first divide students into up to 20 bands based on their prior attainment. We then calculate the average attainment for each of these bands. This allows us to compare a student's result with the average result of students with equivalent prior attainment taking the same qualification. The difference between the two is the student's value-added score in that qualification.

The students' value-added scores are then aggregated to create separate scores for academic qualifications, applied general, and tech level qualifications for each school or college. The supporting information allows schools and colleges to see value-added scores for specific qualifications and qualification types (e.g. A levels). All scores are shown with confidence intervals.

## Prior attainment grades awarded using different grading approaches

In the 2021 to 2022 academic year a different grading approach was used for GCSES, AS and A levels and most VTQs that were taken alongside A levels, to take account of

---

[4] The previous goverment committed not to include results of qualifications achieved between January 2020 and August 2021 in future performance measures, given the alternative assessment arrangements used to award grades in this period, which was during the COVID-19 pandemic.

the impact of the pandemic. In the 2022 to 2023 academic year there was a return to pre-pandemic standards for GCSEs, AS and A levels, with protection built into the grading process to recognise the disruption that students have faced. For VTQs that were taken alongside, or instead, of GCSEs and A levels, there was also a return to pre-pandemic standards in 2022 to 2023.

The way that we calculate our 16 to 18 value added measures is by using the KS4 prior attainment data to put students into prior attainment groups, which allow us to compare 16 to 18 outcomes for a particular student to students with similar prior attainment. This means that we look at a student's relative in-year performance at KS4, compared to their relative in-year performance at 16-18, rather than actually looking at how far they have come from KS4 to 16 to 18. Data included in KS4 prior attainment calculations for the 16 to 18 value added measures in the 2023 to 2024 academic year will also come almost entirely from the 2021 to 2022 academic year. This means that even though the KS4 baseline data and 16 to 18 outcomes data included in value added measures for 2023 to 2024 are based on different grading approaches, it will not have significant impact on the value added measures.

## Value-added calculations

The calculation of 16-18 value added measures contain four main steps, where each step will be explained in detail in the following sections:

- Calculating the national average grade for comparison
- Calculating student value-added (VA) scores
- Calculating school and college VA scores
- Calculating confidence intervals

## Calculating the national average grade for comparison

### Calculating average prior attainment at key stage 4

The starting point for the 16-18 value added calculation is to determine each student's KS4 prior attainment. Prior attainment reflects the point scale used at KS4 in the current reporting year. For specific points information see the KS4 performance points for qualifications that count in performance measures.

Different qualifications are taken into account when calculating VA scores for qualifications in the academic, and applied general and tech level cohorts. As a subset of the academic cohort, the calculation for the A level cohort follows the same method as the academic cohort:

**Table 2: Data used to calculate average prior attainment, by qualification type / cohort**

| Qualification type / cohort | Average prior attainment based on |
|---|---|
| Academic (incl A level) qualifications | GCSEs grades only |
| Applied general and tech level qualifications | All key stage 4 results |

- For both categories, only qualifications achieved during key stage 4 are included in the prior attainment calculation. Re-sits or additional qualifications gained during the 16 to 18 study phase are not included.
- Qualifications in the same subjects will be discounted.
- AS levels taken before a student reaches the end of key stage 4 are included in the prior attainment calculation for academic and applied general/tech level value added.

To calculate prior attainment of students, we first identify exams that are done both during KS4, and are approved for reporting in KS4 tables (in the year the student completed their KS4 study). Simple discounting is applied to pick exam entries that had the highest points for a particular subject, filtering out lower scoring results. This will usually return the best entry that a student sat. The points they received from their exam entries are averaged – weighted by the qualification size of their entries – to return their average point scores.

This process is applied to both a student's GCSE entries – to use as prior attainment for academic qualifications in 16-18 value added measures – and to all of a student's KS4 entries – to use as prior attainment for applied general and tech level qualifications in 16 to 18 value added measures.

**Worked examples**

The student below achieved 4 GCSEs at grade 4 (worth 4 points each) and an OCR Level 1/2 National Certificate at grade M2 (worth 5.5 points) in key stage 4. Each qualification is equivalent to a size of 1.

**Table 3: Comparison of the way prior attainment is calculated for different cohorts**

| Academic qualifications | Applied general and tech level qualifications |
|---|---|
| For academic VA scores, only the student's GCSE grades are included:<br>Total points: 4*4 = 16<br>Total size: 4*1 = 4<br>Total points/total size: 16/4 = 4<br>Average prior attainment at KS4:<br>      APS per entry = 4 | For applied general VA scores, all of the student's key stage 4 qualifications are included:<br>Total points: 4*4+1*5.5 = 21.5<br>Total size: 5*1 = 5<br>Total points/total size: 21.5/5 = 4.3<br>Average prior attainment at KS4:<br>      APS per entry = 4.3 |

For some students, for the 2023 to 2024 progress measures, they will have a mix of prior attainment grades from 2022, which we can use, and from 2021, which we can not use – for example, where students have previously entered GCSE exams early in year 9. The table below shows how we will calculate prior attainment for a student in this situation.

**Table 4: Calculating prior attainment where a student has prior attainment grades from 2021**

| Qualification | Date taken | Grade | Counts toward prior attainment? |
|---|---|---|---|
| GCSE | Summer 2022 | 4 | Included |
| GCSE | Summer 2022 | 4 | Included |
| GCSE | Summer 2022 | 4 | Included |
| GCSE | Summer 2021 | 4 | Ignored |

Total included points: 3*4 = 12

Total size: 3*1 = 3

Total points/total size: 12/3 = 4

Average prior attainment at KS4: APS per entry = 4

## Calculating the national average grade

After determining each student's KS4 average prior attainment, the next step is to calculate the national average grade of every qualification type that will be included within the 16-18 value added report for comparison.

At the start, data for a particular subject are taken – for example A level design and technology[5].

For each student taking this subject, their average KS4 prior attainment and their A level grade are plotted on a chart and divided into 20 bands[6] based on their prior attainment. Each band contains the same number of students.

The first band contains the 5 per cent of students with the lowest prior attainment. In the example below, these mainly achieved '4' grades in their GCSEs. The 20th band contains the 5 per cent of students with the highest prior attainment. They mainly achieved '8' grades in their GCSEs.

---

[5] This example shows an A level but the methodology is equivalent for academic, applied general and tech level qualifications.

[6] There are usually 20 bands. However, if the 20 bands model does not fit well for a qualification due to various reasons, this is reduced to 10 bands, 5 bands or 1 band. 1 band is used where there is a poor relationship between prior attainment at key stage 4 and outcome in level 3 qualifications, for example where there are only a small number of students entering the qualification.

**Figure 1: Percentile Banding for an A-level**

The average attainment for each of these 20 bands can then be calculated. As prior attainment increases, the 16 to 18 attainment will typically increase[7]. This reflects the fact that students who get better grades at key stage 4 typically do better at 16 to 18.

---

[7] Where the outcome attainment does not increase steadily with prior attainment, bands will be combined to create an average attainment based on a larger number of students. This will ensure a steadily increasing or level line. The methodology used is called "pool adjacent violators smoothing".

**Figure 2: Percentile Banding for an A-level**

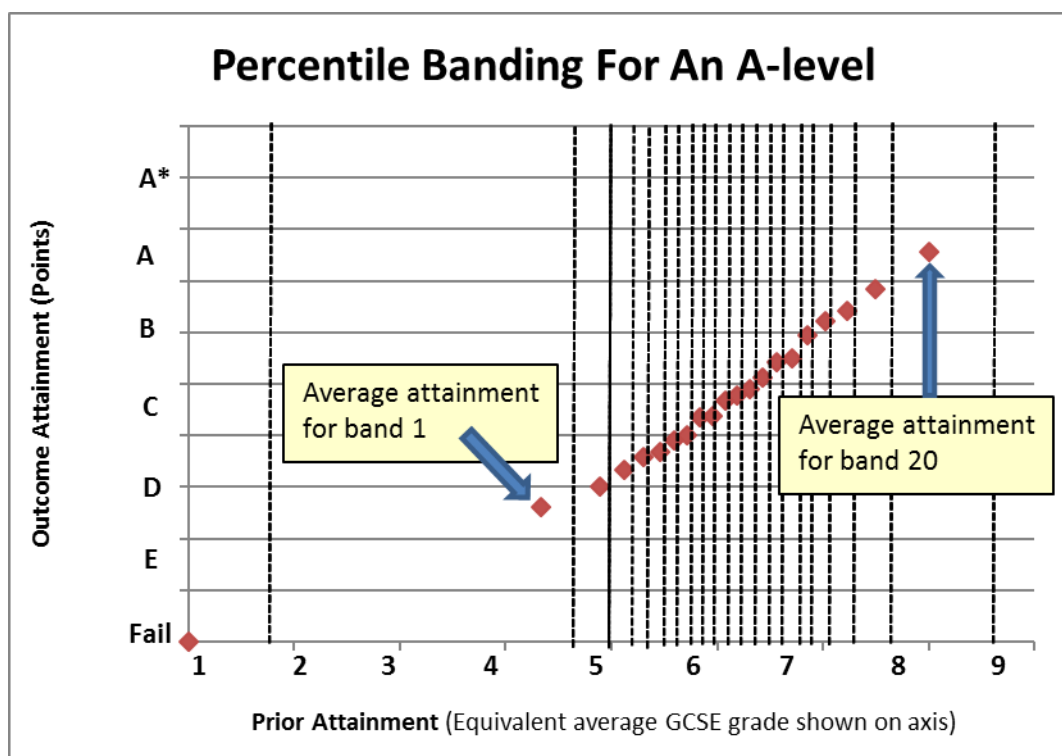

In the example above, for band 1 (the students with the lowest attainment), the average A level grade in this subject is just below a grade 5. For band 20 (the students with the highest prior attainment), the average A level grade in this subject is around an 8 grade.

These averages can then be "joined up" by drawing a straight line between the points to get a line of average attainment, which shows that students with higher prior attainment typically get better grades. The line is also extrapolated with the lowest and highest grades achieved in the qualification type being the starting and ending points respectively.

For example, the figure below shows that students whose average prior attainment was equivalent to a grade 6 at GCSE, on average attain a grade C in this A level (30pts).

Value-added uses the same point scores for outcome attainment as those used in the 16-18 headline attainment measure with one exception. A fail grade in the full International Baccalaureate (IB) scores 91pts (rather than 0pts). This is to avoid a cliff-edge effect compared to students who narrowly pass the IB (the lowest pass grade 24 scores 100.5 pts, pass grade 25 scores 110 pts, pass grade 26 scores 119.5 pts etc).

**Figure 3: Percentile Banding for an A-level**

## Percentile Banding For An A-level

*Outcome Attainment (Points)* — A*, A, B, C, D, E, Fail

*Prior Attainment (Equivalent average GCSE grade shown on axis)* — 1, 2, 3, 4, 5, 6, 7, 8, 9
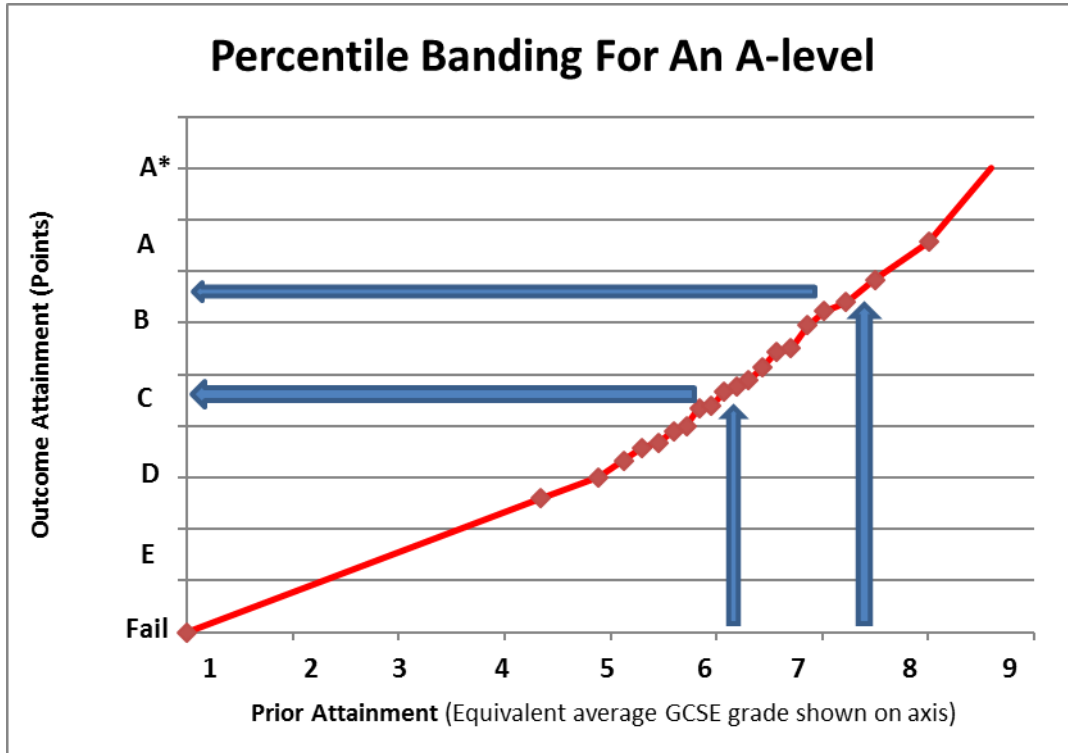

# Calculating student value-added scores

This is the second step of how the 16-18 VA calculation works.

## Calculating student value-added scores for individual qualifications

The line of average attainment from the previous section can then be used to calculate the VA scores. These are the difference between actual attainment and average attainment for students with the same key stage 4 prior attainment.

For example, if a student achieves an A grade when the average attainment for a student with that prior attainment in that subject was a C grade, the VA score is +2 grades. Where the difference between the average attainment and the actual attainment is a fraction of a grade, the VA score will be a decimal. VA scores are reported to 2 decimal points.

**Figure 4: Percentile Banding for an A-level**

The percentile banding approach allows for the average attainment to be calculated in a way that closely aligns with the underlying data. This minimises any bias for certain groupings of prior attainment that can occur if a "line of best fit" is used.

# Calculating school and college value-added scores

School and college VA scores for individual qualifications (e.g. A level chemistry), qualification types (e.g. A Levels) and overall academic, applied general and tech level qualifications can be calculated. This is explained in the following sections.

### Calculating value-added scores for individual qualifications

Once the student VA scores have been calculated for a particular qualification, the average of all the student VA scores for that qualification is calculated within the school or college.

The figure below shows an example of how a school or college VA score is calculated from five student VA scores in an individual qualification.

**Table 5: Worked example for calculating the school or college VA score for individual qualifications**

| Student / school or college | VA score |
|---|---|
| Student 1 | +0.25 |
| Student 2 | +0.35 |
| Student 3 | +0.50 |
| Student 4 | -0.60 |
| Student 5 | -0.80 |
| School or college VA score in the qualification (eg. A level maths) | +0.25+0.35+0.50-0.60-0.80 ÷ 5 = -0.06 A level grades |

The information required to perform this calculation is detailed below:

**Table 6: Information required to calculate a school or college's value-added score for an individual qualification**

| Variable | Description |
|---|---|
| $n$ | Number of exam records in qualification per school/college |
| $\underline{u}$ | Array of exam record VA scores |

A qualification VA score for a school or college is calculated by finding the average of all the exam level VA scores in that qualification and in that institution.

$$VA_{avg} = \frac{\sum_{1}^{n} \underline{u}_n}{n}$$ where $\underline{u}_n$ = the VA score of the $n_{th}$ exam record

Hence, the overall institution VA score $U$ for the given qualification is $U = VA_{avg}$.

## Calculating value-added scores for qualification types

After the VA scores for each qualification have been determined, the qualification type VA scores for the school or college can be calculated by finding the sum of the VA scores for each qualification within the type, divided by the total number of students taking each individual qualification.

**Table 7: Calculating value-added scores for qualification types**

| Score / number of students | Score |
|---|---|
| A level history VA score | +0.25 |
| Number of students | 50 |
| A level economics VA score | -0.70 |
| Number of students | 20 |
| A level maths VA score | +0.35 |
| Number of students | 100 |
| Overall A level VA score | $$\frac{(50*+0.25)+(20*-0.70)+(100*+0.35)}{50+20+100}$$ $$=+0.20 \text{ A level grades}$$ |

The information required to perform this calculation is as follows:

**Table 8: Information required to calculate a school or college's value-added score for qualification types**

| Variable | Description |
|---|---|
| $VA_{QualSubj}$ | VA score for a particular qualification within a given qualification type at school/college level |
| $VA_{Qual}$ | Aggregate VA score across qualifications within a given qualification type at school/college level |
| $n_{ExamQualSubj}$ | Number of exams for a particular qualification at school/college level |
| $n_{ExamQuals}$ | Number of exams across all qualifications within a given qualification type at school/college level |

Weighting factor for selected qualifications, $\omega$ = 1 for all qualifications, except General Studies, where $\omega$ = 0.5

## Calculating aggregate value-added scores for a qualification type

The formula below is used to calculate aggregate VA scores for qualification types for a school or college. This formula is used for each qualification type that a school or college offers:

$$VA_{Qual} = \frac{\sum_{1}^{TotalSubjs} VA_{QualSubj} \cdot n_{ExamQualSubj} \cdot \omega}{\sum n_{ExamQualSub} \cdot \omega}$$

## Calculating academic, applied general and tech level qualifications value-added score

Finally, using VA scores for all qualifications, school and college overall academic, applied general and tech level VA scores can be calculated.

Academic VA scores are the average of all academic qualification type VA scores. This calculation is weighted by the relative size of each qualification type. Applied general and tech level scores are calculated likewise.

Below is the summary of all qualification type VA scores for an example school:

**Table 9: Qualification type VA scores for an example school**

| Qualification type | VA score | Number of students | Qualification type size |
|---|---|---|---|
| A level chemistry | +0.50 | 50 | 1.0 |
| AS level maths | –0.15 | 100 | 0.5 |
| BTEC Level 3 subsidiary diploma business studies | +0.30 | 30 | 1.0 |
| Level 3 Foundation Diploma in art and design | –0.10 | 60 | 2.0 |

**Table 10: Calculating an Academic VA score and Applied general VA score using VA scores for an example school (as in table 9 above)**

| Academic VA scores | Applied general VA scores |
|---|---|
| Total points: (50*+0.50*1)+(100*-0.15*0.5) = 17.5 <br> Total sizes: 50*1+100*0.5 = 100 <br> Total points/total sizes: 17.5/100 =+0.175 A level grades | Total points: (30*+0.30*1)+(60*-0.10*2) = -3 <br> Total sizes: 30*1+60*2 = 150 <br> Total points/total sizes: -3/150 =-0.02 BTEC grades |

The information required to perform this calculation is detailed below:

**Table 11: Information required to calculate an aggregate VA score for a qualification type**

| Variable | Description |
|---|---|
| $VA_{ACVQ}$ | School or college's overall academic, applied general or tech level VA score |
| $N_{QualACVQ}$ | The number of academic, applied general or tech level qualifications for that school or college |
| $VA_{Qual}$ | School or college's VA score for given academic, applied general or tech level qualification (e.g. A level physics VA score) |
| $\mu_{Qual}$ | National average VA score for a given academic, applied general or tech level qualification |
| $n_{Qual}$ | Number of entries within school or college within given academic, applied general or tech level qualification |
| $Vol_{Qual}$ | The size of the qualification type for the given academic, applied general or tech level qualification, in relation to A Levels (for academic qualifications) or BTEC level 3 Subsidiary Diplomas (for applied general qualifications) |

The formula below is used to calculate aggregated VA scores for academic, applied general and tech level qualifications. As this VA score combines information from different qualification types, the $Vol_{Qual}$ variable is included in the formula.

$$VA_{ACVQ} = \frac{\sum_1^{N_{Qua\ lACVQ}} \left( [\![ (VA) ]\!]_{Qual} - \mu_{Qual} \right) \cdot n_{Qual} )}{\sum_1^{N_{QualACVQ}} \left( n_{Qual} \cdot Vol_{Qual} \right)}$$

This step includes a small adjustment to correct for aggregation error. This means the student average VA score is 0 rather than the institution average. This may mean there is a small inconsistency with qualification type and individual qualification scores. For example, if an institution only offered A levels, then their A levels score could be slightly different from their aggregate academic score, even though they are calculated from the same results.

# Calculating confidence intervals for 16 to 18 value-added

This is the final step of how the 16-18 VA calculation works.

## Purpose

The 16-18 VA measure help to give an indication of how effective a school or college is in helping their students make progress. However, the VA scores of a school or college are derived from a given set of students' results for a particular test paper on a particular day. In addition, it is known that the school or college is not the only influence on students' attainment. In fact, there are many random factors that will make a considerable impact on students' attainment, such as their home life or any private tuition they receive. As such, confidence intervals are used to capture the uncertainty of the 16-18 VA measure.

## Calculating confidence intervals around a school or college's qualification value-added score

The information required to perform this calculation is detailed below:

**Table 12: Information required to calculate confidence intervals around a school or college's qualification value-added score**

| Variable | Description |
|---|---|
| $\sigma^2$ | National variance of error |
| $n$ | Number of exam records in qualification per school/college |
| $\underline{u}$ | Array of exam record VA scores |
| $\psi$ | Standard error per qualification per school/college |

Using the standard error, it is possible to calculate confidence intervals around a school or college's qualification value-added score.

$$\psi = \sqrt{\sigma^2 / n}$$

The 95% confidence interval around a school or college's qualification VA score is then given by:

$$U \pm 1.96\psi$$

## Calculating confidence intervals around a school or college's qualification type value-added score

The information required to performance this calculation is as follows:

**Table 13: Information required to calculate confidence intervals around a school or college's qualification type value-added score**

| Variable | Description |
|---|---|
| $VA_{QualSubj}$ | VA score for a particular qualification within a given qualification type at school/college level |
| $VA_{Qual}$ | Aggregate VA score across qualifications within a given qualification type at school/college level |
| $n_{ExamQualSubj}$ | Number of exams for a particular qualification at school/college level |
| $n_{ExamQuals}$ | Number of exams across all qualifications within a given qualification type at school/college level |
| $\Psi_{QualSubj}$ | Standard error for a given qualification at school/college level |
| $\Psi_{VA_{Qual}}$ | Standard error for a given qualification type at school/college level |
| $\omega$ | Weighting factor for selected qualifications, $\omega$ = 1 for all qualifications, except General Studies, where $\omega$ = 0.5 |

It is then possible to calculate 95% confidence intervals around the school or college's qualification type VA score. To do this, the standard error for the qualification type needs to be determined first:

$$\psi_{VA_{Qual}} = \sqrt{\sum_{1}^{n_{ExamQualSubj}} \left( \frac{n_{ExamQualSubj}}{n_{ExamQuals}} \right)^2 \cdot \psi_{QualSubj}^2}$$

With the standard error for the qualification type, the following equation can be used to calculate confidence intervals around the VA score:

$$VA_{Qual} \pm 1.96 \psi_{VA_{qual}}$$

### Calculating confidence intervals around a school or college's academic, applied general or tech level value-added score

The information required to perform this calculation is detailed below:

**Table 14: Information required to calculate confidence intervals around a school or college's academic, applied general or tech level value-added score**

| Variable | Description |
|---|---|
| $VA_{ACVQ}$ | School or college's overall academic, applied general or tech level VA score (in grades) |
| $N_{QualACVQ}$ | The number of academic, applied general or tech level qualifications for that school or college |
| $VA_{Qual}$ | School or college's VA score for given academic, applied general or tech level qualification (e.g. A level physics VA score) |
| $\mu_{Qual}$ | National average VA score for a given academic, applied general or tech level qualification |
| $n_{Qual}$ | Number of entries within school or college within given academic, applied general or tech level qualification |
| $Vol_{Qual}$ | The size of the qualification type for the given academic, applied general or tech level qualification, in relation to A Levels (for all level 3 cohorts) |
| $\Psi_{VA_{ACVQ}}$ | Standard error of overall academic, applied general or tech level value-added score (in grades) |
| $\psi_{Qual}$ | Standard error for the VA score for the given academic, applied general or tech level qualification (in points, before rescaling to grades) |

It is possible to calculate confidence intervals around each sector subject area (across qualification types) VA score. To do this, the standard error must first be calculated which is given by the formula below:

$$\psi_{VA_{ACVQ}} = \sqrt{\sum_{1}^{N_{QualACVQ}} \left( \frac{n_{Qual} \cdot Vol_{Qual}}{\sum_{1}^{N_{QualACVQ}} (n_{Qual} \cdot Vol_{Qual})} \right)^2 \cdot \left( \frac{\psi_{Qual}}{Vol_{Qual}} \right)^2}$$

With the academic or applied general standard error, the following equation can be used to calculate confidence intervals around the VA score:

$$VA_{ACVQ} \pm 1.96 \cdot \psi_{VA_{ACVQ}}$$

## Understanding school and college confidence intervals

Confidence intervals are used to capture the uncertainty of the 16-18 VA measure.

A school or college's confidence interval is always centred on the school or college's VA score. For example, if a school or college's VA score is +1 and the size of their confidence interval is 0.5 grades, then the confidence interval ranges between +0.5 and +1.5 (i.e. half a grade either side of the VA score).

The size of the confidence interval is largely determined by the number of students in the school or college that completed the level 3 qualification. Schools and colleges with fewer students completing the qualification have wider confidence intervals because their VA score is based on a smaller number of students, and so there is less evidence on which to judge the school or college's effectiveness.

School and college confidence intervals can be interpreted to give one of three conclusions:

- a school or college is **significantly below** the national average;
- a school or college is **not significantly different** to the national average;
- a school or college is **significantly above** the national average.

The national average VA score is **0**.

## Calculation of statistical significance of value-added scores

A school or college qualification VA score (denoted $U$) is defined to be below the national average and statistically significant when their VA score is below 0 and their upper end of the 95% confidence interval is below 0. This can be expressed formulaically as:

$$U < 0 \qquad \& \qquad (U + 1.96\psi) < 0$$

A school or college qualification VA score (denoted $U$) is defined to be above the national average and statistically significant when their VA score is above 0 and their lower end of the 95% confidence interval is above 0. This can be expressed formulaically as:

$$U > 0 \qquad \& \qquad (U - 1.96\psi) > 0$$

## Statistical significance at qualification type level

A school or college qualification type VA score is defined to be below the national average and statistically significant when their VA score is <u>below 0</u> and their upper end of the 95% confidence interval is below 0. This can be expressed formulaically as:

$$VA_{Qual} < 0 \qquad \& \qquad \left(VA_{Qual} + 1.96\psi_{VA_{Qual}}\right) < 0$$

A school or college qualification VA score defined to be above the national average and statistically significant when their VA score is <u>above 0</u> and their lower end of the 95% confidence interval is above 0. This can be expressed formulaically as:

$$VA_{Qual} > 0 \qquad \& \qquad \left(VA_{Qual} - 1.96\psi_{VA_{Qual}}\right) > 0$$

## Statistical significance at academic, applied general or tech level

A school or college academic, applied general or tech level VA score is defined to be below the national average and statistically significant when their VA score is <u>below 0</u> and their upper end of the 95% confidence interval is below 0[8]. This can be expressed formulaically as:

$$VA_{ACVQ} < 0 \,\&\, \left(VA_{ACVQ} + 1.96 \cdot \psi_{VA_{ACVQ}}\right) < 0$$

A school or college academic, applied general or tech level VA score is defined to be above the national average and statistically significant when their VA score is <u>above 0</u> and their lower end of the 95% confidence interval is above 0. This can be expressed formulaically as:

$$VA_{ACVQ} > 0 \,\&\, \left(VA_{ACVQ} - 1.96 \cdot \psi_{VA_{ACVQ}}\right) > 0$$

---

[8] We base calculations on rounded figures (to 2 decimal places). For example, in the rare case that the upper CI is -0.000001, it is not regarded as significantly below average as the rounded upper CI is 0.00, therefore the CI range includes 0.

# Value added measure bandings for the 2023 to 2024 data

When value added measures are shown on the [Compare School and College Performance](#) service, each school and college's progress score is given a banding, which also takes the confidence interval into account.

The tables below shows what these bandings are for each cohort, and how we calculated them for the progress measures for students completing 16-18 study in the 2023 to 2024 academic year.

**Table 15: Bandings for A level and Academic progress measures**

| Progress banding | A school or college is given this banding if… |
|---|---|
| **Well above average** | The progress score is greater than or equal to 0.39, and the entire confidence interval is above 0.<br><br>5% of schools and colleges in England. |
| **Above average** | The progress score is greater than 0 but lower than 0.39, and the entire confidence interval is above 0.<br><br>21% of schools and colleges in England. |
| **Average** | The banding for this school or college is 'average' because the confidence interval for the progress score includes 0.<br><br>43% of schools and colleges in England. |
| **Below average** | The progress score is lower than 0 but greater than or equal to -0.61, and the entire confidence interval is below 0.<br><br>26% of schools and colleges in England. |
| **Well below average** | The progress score is lower than -0.61 and the entire confidence interval is below 0.<br><br>5% of schools and colleges in England. |

## Table 16: Bandings for Applied General progress measures

| Progress banding | A school or college is given this banding if… |
|---|---|
| Well above average | The progress score is greater than or equal to 0.6, and the entire confidence interval is above 0. <br><br> 5% of schools and colleges in England. |
| Above average | The progress score is greater than 0 but lower than 0.6, and the entire confidence interval is above 0. <br><br> 16% of schools and colleges in England. |
| Average | The banding for this school or college is 'average' because the confidence interval for the progress score includes 0. <br><br> 61% of schools and colleges in England. |
| Below average | The progress score is lower than 0 but greater than or equal to -0.52, and the entire confidence interval is below 0. <br><br> 13% of schools and colleges in England. |
| Well below average | The progress score is lower than -0.52 and the entire confidence interval is below 0. <br><br> 5% of schools and colleges in England. |

**Table 17: Bandings for Tech Level progress measures**

| Progress banding | A school or college is given this banding if… |
|---|---|
| **Well above average** | The progress score is greater than or equal to 0.93, and the entire confidence interval is above 0. 5% of schools and colleges in England. |
| **Above average** | The progress score is greater than 0 but lower than 0.93, and the entire confidence interval is above 0. 12% of schools and colleges in England. |
| **Average** | The banding for this school or college is 'average' because the confidence interval for the progress score includes 0. 69% of schools and colleges in England. |
| **Below average** | The progress score is lower than 0 but greater than or equal to -0.78, and the entire confidence interval is below 0. 10% of schools and colleges in England. |
| **Well below average** | The progress score is lower than -0.78 and the entire confidence interval is below 0. 5% of schools and colleges in England. |

# Attainment measures

## Headline attainment measure

The headline attainment measure is a measure of the average point score (APS) per entry. This is expressed as both a point score and as a grade.

The headline attainment measure is reported by cohort: for level 3 - A level, academic, applied general, and tech level; and the technical certificate cohort for level 2. A student can be reported in more than one cohort, for example, a student who enters both A level and applied general qualifications will contribute to an institution's performance in both attainment measures.

## Headline attainment measure methodology

The average point score per entry is calculated by dividing the total number of points achieved by students in a particular cohort by the total size of entries for those students.

For example, to calculate an average point score per academic entry, the total point score achieved by students in all academic qualifications is divided by those students' total size of academic entries. The average point score per applied general and tech level entry is calculated in the same way, based on students entered for the relevant qualifications and their results.

Most results included in the 2023 to 2024 attainment measures will come from qualifications awarded in the 2023 to 2024 academic year, and some results will come from the 2022 to 2023 academic year. In a very small number of cases, data from the 2021 to 2022 academic year will be used – for example, if students have taken three years to complete 16 to 18 study, and have taken a qualification that counts towards performance measures in their first year of study. A different grading approach was used in 2021 to 2022, which may affect performance measures where these results have been taken into account – but these grades will be so small in number that any effect on performance measures will be minimal.

At 16 to 18 qualifications can be smaller or larger, for example an AS level is size 0.5, compared to A level having size 1, whilst an International Baccalaureate is size 5 (and would count as 5 entries). Where a student has attempted an A level and failed, but they have been awarded an AS in the same subject, the size of the A level entry is counted and not the size of the AS level entry. Therefore, these students will have an A level size of 1 and not 0.5.

Average grades are published for each school and college in the 16 to 18 performance measures alongside the average point score per entry measure. These are reported to help interpret the average point score per entry in terms of grades that are meaningful for the types of qualification reported within each performance cohort.

The average grade per entry is calculated using the average point score per entry. The average point score per entry is assigned an average grade based on the average point score band rules set out in table 2, table 3 and table 4 below. The average point score is kept unrounded when assigning the grade; for example, an A level APS per entry of 41.6667 would be given a grade B.

- The average grade per A level and academic entry is reported in terms of A level grades. Table 18 shows the relevant point score bands for A levels and academic qualifications.
- The average grade per level 3 vocational entry is reported in terms of qualification with a four-grade structure (for example, Distinction*/Distinction/Merit/Pass). Table 19 shows the relevant point score bands for applied general and tech level qualifications.
- The average grade per level 2 technical certificate entry is based on a level 2 qualification with a Distinction*/Distinction/Merit/Pass grade structure. Historically some reported level 2 technical certificates have had passing grades at level 1, and the scale is extended to reflect this. All passing grades in reported qualifications will count towards an institution's APS per entry score and the related average grade. Table 20 shows the relevant point score bands for technical certificate qualifications.

**Table 18: Average grade per A level or academic qualification**

| A level grade (for comparison only) | A level point score (for comparison only) | APS band | Fine grade[9] |
|---|---|---|---|
| A* | 60 | >= 58.34 – 60.00 | A* |
| A* | 60 | >= 55.00 – < 58.34 | A*- |
| A | 50 | >= 51.67 – < 55.00 | A+ |
| A | 50 | >= 48.34 – < 51.67 | A |
| A | 50 | >= 45.00 – < 48.34 | A- |
| B | 40 | >= 41.67 – < 45.00 | B+ |
| B | 40 | >= 38.34 – < 41.67 | B |
| B | 40 | >= 35.00 – < 38.34 | B- |
| C | 30 | >= 31.67 – < 35.00 | C+ |
| C | 30 | >= 28.34 – < 31.67 | C |
| C | 30 | >= 25.00 – < 28.34 | C- |
| D | 20 | >= 21.67 – < 25.00 | D+ |
| D | 20 | >= 18.34 – < 21.67 | D |
| D | 20 | >= 15.00 – < 18.34 | D- |
| E | 10 | >= 11.67 – < 15.00 | E+ |
| E | 10 | >= 8.34 – < 11.67 | E |
| E | 10 | >= 5.00 – < 8.34 | E- |
| U | 0 | < 5.00 | U |

---

[9] Fine grades such as B-, B and B+ are assigned by evenly distributing the points around the point score i.e. 40 points for a grade B.

**Table 19: Average grade per applied general or tech level qualification**

| Grade | Points / size (L3 vocational) | APS band | Fine grade[10] |
|---|---|---|---|
| Distinction* | 50[11] | >= 46.67 – 50.00 | Dist* |
| Distinction* | 50[12] | >= 41.67 – < 46.67 | Dist*- |
| Distinction | 35 | >= 36.67 – < 41.67 | Dist+ |
| Distinction | 35 | >= 33.34 – < 36.67 | Dist |
| Distinction | 35 | >= 30.00 – < 33.34 | Dist- |
| Merit | 25 | >= 26.67 – < 30.00 | Merit+ |
| Merit | 25 | >= 23.34 – < 26.67 | Merit |
| Merit | 25 | >= 20.00 – < 23.34 | Merit- |
| Pass | 15 | >= 16.67 – < 20.00 | Pass+ |
| Pass | 15 | >= 13.34 – < 16.67 | Pass |
| Pass | 15 | >= 10.00 – < 13.34 | Pass- |
| U | 0 | < 10.00 | U |

---

[10] Fine grades for the vocational grade bands are assigned by evenly distributing the points around the points/grades for a prototypical vocational qualification with a 4-grade structure (D*/D/M/P).

[11] Note: in some exceptional circumstances schools/colleges may achieve a tech level APS above 50 where students have entered for Principal Learning qualifications.

[12] Note: in some exceptional circumstances schools/colleges may achieve a tech level APS above 50 where students have entered for Principal Learning qualifications.

**Table 20: Average grade per level 2 technical certificate qualification**

| Level | Grade | Points / size (L1/L2 vocational ) | APS band | Fine grade[13] |
|---|---|---|---|---|
| L2 | Distinction * | 8 | >= 7.83 - 8.00 | L2 Dist* |
| L2 | Distinction * | 8 | >= 7.50 - < 7.83 | L2 Dist*- |
| L2 | Distinction | 7 | >= 7.17 - < 7.50 | L2 Dist+ |
| L2 | Distinction | 7 | >= 6.83 - < 7.17 | L2 Dist |
| L2 | Distinction | 7 | >= 6.50 - < 6.83 | L2 Dist- |
| L2 | Merit | 6 | >= 6.17 - < 6.50 | L2 Merit+ |
| L2 | Merit | 6 | >= 5.83 - < 6.17 | L2 Merit |
| L2 | Merit | 6 | >= 5.50 - < 5.83 | L2 Merit- |
| L2 | Pass | 5 | >= 5.17 - < 5.50 | L2 Pass+ |
| L2 | Pass | 5 | >= 4.83 - < 5.17 | L2 Pass |
| L2 | Pass | 5 | >= 4.50 - < 4.83 | L2 Pass- |
| L1 | Distinction | 4 | >= 4.17 - < 4.50 | L1 Dist+ |
| L1 | Distinction | 4 | >= 3.83 - < 4.17 | L1 Dist |
| L1 | Distinction | 4 | >= 3.50 - < 3.83 | L1 Dist- |
| L1 | Merit | 3 | >= 3.17 - < 3.50 | L1 Merit+ |
| L1 | Merit | 3 | >= 2.83 - < 3.17 | L1 Merit |
| L1 | Merit | 3 | >= 2.50 - < 2.83 | L1 Merit- |
| L1 | Pass | 2 | >= 2.17 - < 2.50 | L1 Pass+ |
| L1 | Pass | 2 | >= 1.83 - < 2.17 | L1 Pass |
| L1 | Pass | 2 | >= 1.50 - < 1.83 | L1 Pass- |
| No level | U | 0 | < 1.50 | U |

[13] Fine grades for the L2 vocational grade bands are assigned by evenly distributing the points/grades for a prototypical qualification with a D*/D/M/P grade structure at L2. Some reported qualifications include grades that span both L2 and L1 so the fine-grade classification is extended to reflect this.

A worked example of calculating an average grade per academic qualification based on a cohort of five students is shown in Table 21.

**Table 21: Example of calculation for average grade per academic qualification**

| Students | Total academic point score | No of academic entries |
|---|---|---|
| Student 1 | 100 | 3.0 |
| Student 2 | 240 | 4.0 |
| Student 3 | 140 | 3.0 |
| Student 4 | 210 | 5.5 |
| Student 5 | 140 | 4.0 |
| **Sum** | 830 | 19.5 |
| **Average point score** | **42.56** | |
| **Average grade (academic)** | **B+** | |

## Discounting in attainment measures

Discounting is primarily about ensuring that where a student has taken more than one qualification in the same subject area, the performance measures only give credit to institutions once for teaching a single course of study.

- One level 3 qualification can discount another level 3 qualification(s) in the same subject area.
- Level 2 qualifications can discount other level 2 qualification(s) in the same subject. Discounting between level 2 qualifications prefers first the largest qualification, and if all the same size, the qualification with the most performance points in the same subject area. Note, a failed technical certificate qualification cannot discount a smaller technical certificate pass.
- Level 3 qualifications (applied general and tech levels) can discount a level 2 qualification in the same subject area (but not vice-versa). Note, a failed level 3 qualification cannot discount a level 2 pass.

Full details on discounting can be found in the discounting guidance.

# Additional attainment measures

In addition to the headline attainment measures, we produce and publish two additional attainment measures for the A level cohort only:

- Average grade across students' best 3 A levels.
- The proportion of students achieving at least AAB including two or more 'facilitating subjects'.

We will not publish the Level 3 (advanced level) maths measure for 2023 to 2024 – see the section on the [additional advanced level maths measure](#) for more information.

## Best 3 A levels

This measure applies to the subset of A level students who entered at least one full size A level (this includes double award A levels, and applied A levels, but does not include AS levels, general studies or critical thinking). If students are entered for less than three full size A levels, they are only included in the measure if they have not entered for other academic, applied general and tech level qualifications greater than or equal to the size of an A level. Where a student has only been at a school or college for one year, they need to have entered three A levels to be included.

A best 3 A levels score is then calculated for each student by adding together the points in their best 3 A levels, then summed across a school or college. This is divided by the number of eligible students, then further divided by three to give a best 3 A levels points per entry, and this is also expressed as a grade.

For students who have only entered one or two A levels, but have been at a school or college for two years and have not entered at least size 1 of other approved qualifications, the points in their one or two A levels are still divided by three.

## Worked examples of the best 3 A levels measure

The following examples assume all the students remained at the same school or college for two years.

**Table 22: Worked example for the best 3 A levels measure – student level**

| Student | Qualification | Size | Year achieved | Grade | Points |
|---------|---------------|------|---------------|-------|--------|
| A | Single Award A level | 1 | 2024 | A* | 60 pts |
| A | Single Award A level | 1 | 2024 | B | 40 pts |
| A | Single Award A level | 1 | 2024 | B | 40 pts |
| | **Total points** | | | | **140 pts** |
| B | Double Award A level | 2 | 2024 | A* A* | 120 pts |
| B | Single Award A level | 1 | 2024 | A | 50 pts |
| B | Single Award A level | 1 | 2024 | B | Ignored |
| | **Total points** | | | | **170 pts** |
| C | Single Award A level | 1 | 2023 | B | 40 pts |
| C | Single Award A level | 1 | 2024 | B | 40 pts |
| C | Single Award AS level | 0.5 | 2024 | C | Ignored |
| | **Total points** | | | | **80 pts** |

- For student A: their best 3 A levels count in the measure. Note that students who study combined A/AS levels, where size = 1.5, each result is divided by 1.5 to scale the size/points to 1 A level.
- For student B: the double award counts as two of their best three A level entries; only the best result from the two single award A levels count (if there are two double awards, the points from the lower grade are halved).
- For student C: although this student has only entered 2 A levels they still count in the measure, provided they have not also entered an approved tech level, applied general or other academic qualification of size=1). The AS result does not count (only A levels count in this measure).

The points for students A, B and C are combined to produce a school/college score in the best 3 A levels measure as follows:

**Table 23: Worked example for the best 3 A levels measure – school or college level**

| Student / total | Points |
|---|---|
| Student A | 140 |
| Student B | 170 |
| Student C | 80 |
| **Total points** | 390 |
| **Total entries** | 9 (number of students x 3) |
| **Points per entry** | 390 / 9 = 43.33 |
| **Result expressed as a grade** | B+ |

## AAB measure (of which at least two are in facilitating subjects)

We will publish a measure of the proportion of students in a school or college that achieve at least AAB in their A levels, and where at least two of the A levels are in 'facilitating subjects'.

The 'facilitating subjects' are: Biology, Chemistry, Physics, Mathematics, Further Mathematics, Geography, History, English Literature, and Classical/Modern Languages[14].

This measure applies to the subset of A level students who entered at least one full size A level, excluding applied A levels (this includes double award A levels, but also does not include AS levels, general studies or critical thinking). It is a similar subset to the best 3 A levels measure, except that applied A levels are not included when determining the cohort. If students are entered for less than three full size A levels, they are only included in the measure if they have not entered for other academic, applied general and tech level qualifications greater than or equal to the size of an A level. Where a student has only been at a school or college for one year, they need to have entered three A levels to be included. A student must have achieved three A levels, of which at least two are in facilitating subjects, at grades AAB or better.

The qualification numbers for A level facilitating subjects, awarding organisations and qualification titles are flagged in the guidance showing discount codes here: https://www.gov.uk/government/publications/16-to-19-qualifications-discount-codes-and-point-scores.

---

[14] Classical/Modern Languages which will count towards the AAB 16 to 18 performance measure in 2022 to 2023 are: Arabic, Bengali, Chinese, Dutch, French, German, Greek (Classical), Greek (Modern), Gujarati, Irish (second language), Italian, Japanese, Latin, Modern Hebrew, Panjabi, Persian, Polish, Portuguese, Russian, Spanish, Turkish, Urdu, Welsh (second language)

The following table summarises the rules governing which A level and academic qualification results contribute to headline attainment and the Best 3 A level and AAB additional measures:

**Table 24: Rules for which A level results contribute to headline and additional attainment measures**

| Qualification | Counts in headline attainment (APS) | Counts in best 3 A levels measure | Counts in at least AAB in 2+ facilitating subjects measure |
|---|---|---|---|
| GCE A level | Yes | Yes (except General Studies and Critical Thinking) | Yes (except General Studies and Critical Thinking) |
| GCE AS level | Yes | No | No |
| Applied GCE AS level Double Award | Yes | No | No |
| Applied GCE Single Award | Yes | Yes | No |
| Applied GCE AS level | Yes | No | No |
| Applied GCE Double Award | Yes | Yes | No |

# Additional entry measures

These additional entry measures are not published on CSCP, but are available in downloadable performance data.

## Level 3 vocational entry measures

The measures show the number of students entering level 3 technical and vocational qualifications that count in the 16 to 18 performance measures as a proportion of the total number of students entering any level 3 vocational qualification. The level 3 comparison group includes all level 3 vocational qualifications at least equivalent in size to one A level (minimum 325 guided learning hours), including those which are not approved to count in the 16 to 18 performance measures. The measures are produced separately for applied general qualifications and tech levels.

We do not apply discounting when determining the proportion of students entering approved level 3 vocational qualifications out of the entire cohort of level 3 vocational students (approved and non-approved).

T Level students are not included in this measure in any way. See the section on T Level accountability measures for more information.

## Calculating the tech level entry measure

**Table 25: Calculating the tech level entry measure**

| Variable | Description |
|----------|-------------|
| $\%_{Tech}$ | Proportion of students entering tech levels that count in performance measures |
| $N_{Tech}$ | Number of students entering tech levels that count in performance measures |
| $N_{NonL3Voc}$ | Number of students just entering level 3 vocational qualifications that do not count in performance measures at least the size of one A level |

$$\%_{Tech} = \frac{N_{Tech}}{N_{Tech} + N_{NonL3Voc}}$$

Note: The denominator in this calculation does not include applied general qualifications.

## Calculating the applied general entry measure

**Table 26: Calculating the applied general entry measure**

| Variable | Description |
|----------|-------------|
| $\%_{AGen}$ | Proportion of students entering applied general qualifications that count in performance measures |
| $N_{AGen}$ | Number of students entering applied general qualifications that count in performance measures |
| $N_{NonL3Voc}$ | Number of students just entering level 3 vocational qualifications that do not count in performance measures at least the size of one A level |

$$\%_{AGen} = \frac{N_{AGen}}{N_{AGen} + N_{NonL3Voc}}$$

Note: The denominator in this calculation does not include tech level qualifications.

## Level 2 Technical Certificate entry measure

This measure shows the proportion of students whose highest attainment is a level 2 qualification and who achieve a technical certificate approved to count in performance measures.

Note discounting will not apply in this measure. Consequently, a student who passes both a technical certificate and also a larger vocational qualification at level 2, will count towards an institution's performance in this measure.

# Retention measures

All retention measures are reported separately for each cohort.

## Headline retention measure

The headline retention measure shows the percentage of students who are retained to the end of the 'core aim' (or main learning aim) of their study programme at a school or college. The core aim is either a level 3 qualification that counts in performance measures (academic, A level, applied general and tech level) or a level 2 qualification that counts in performance measures (technical certificate).

Withdrawing from supporting aims, such as GCSEs, will not stop students being counted as retained on this measure. Similarly, an A level student only needs to complete one A level to be counted as retained[15].

Students are counted as retained if they are recorded as having "completed the learning activities leading to the learning aim" on the Learning Aim Status field of the school census or the Completion Status field of the ILR.

Some programmes will be more than one-year long. For example, an International Baccalaureate is typically studied over two years. For a student to be counted as retained they must complete all learning activities for an aim.

Since the retention measure is calculated at student level it is not affected by the total number of subjects a student takes, or whether they only complete a subset of these. Enrolling a student for additional AS level subjects alongside A levels, or entering a student for AS level exams as well as A level exams in the same subject will not affect the retention calculation.

In the majority of cases, the core aim will be at least the size of 1 A level or 4 GCSEs. However, where students are solely taking AS levels they can be counted as retained in year 12 provided they complete at least one AS level. We publish separate supporting information on the proportion of level 3 students who return in year 13 (see the section below on the returned and retained for a second year measure).

Some students may take multiple programmes that are one academic year in length. In these cases, they need to have completed in any year, for level 3 programmes, an aim equivalent to the size of 1 A Level and for level 2 programmes an aim equivalent in size to 4 GCSEs. Or if they have no aims of this size, an aim of A level size 0.5 or GCSE size

---

[15] The A level that is completed must be in a subject other than General Studies or Critical Thinking.

2, for level 3 and level 2 programmes respectively, again in any year. A range of examples are shown below.

## Exceptions to the retention measure

Students who are not eligible for funding because they withdrew during the "qualifying period" at the start of their programme are not included in the retention measure. For programmes longer than 24 weeks the qualifying period is six weeks, for programmes that are 2 to 24 weeks the qualifying period is two weeks. All withdrawals from a programme will be treated in the same way in the measure methodology regardless of whether they are related to educational reasons or not. This aligns with the funding methodology.

The following aims are not included in the retention measure:

- where a student's core aim is less than 0.5 in size
- where a student's core aim has a completion status of 'continuing'

where the planned end date of a student's core aim is after the current reporting year and the student is academic age 18 in the reporting year.

Independent schools are not included in the retention measure as learning aims data are not available for these schools.

Students that have completed aims and are at the end of 16-18 study will only be reported in retention measures if they also meet the criteria for inclusion in 16-18 performance measures as set out in the section on 'Students included in 16 to 18 performance measures'.

## Selection of the core aim

The majority of students will only have one core aim for their time in 16 to 18 education. However, any students who attend multiple institutions will have one core aim for each institution attended.

The process of selecting a student's core aim depends on the combination of aims that a student is studying. A student can be studying either all academic aims, all vocational aims or a mixture of academic and vocational aims.

When a student has a mix of level 2 and level 3 aims, the level of their aims is largely ignored in selecting the core aim as selection will continue to be done on the status of the aim. The level of the aim only comes into consideration where a student has multiple aims of the same size with the same status.

## All academic aims or academic aims and level 2 vocational aims

If a student is studying the International Baccalaureate, this aim is selected as their core aim due to the large size of this type of qualification. Otherwise, an aim of size 1 A level or 4 GCSEs or above is selected as their core aim, with preference being given to any aim recorded as 'completed'. If a student has no completed aims, then an aim recorded as 'continuing' is selected. If a student has no completed or continuing aims, then an aim recorded as 'withdrawn' or 'transferred' is selected as their core aim.

If a student does not have any aims of size 1 A level or 4 GCSEs or above, the above process is followed for aims of size 0.5 A levels or 2 GCSEs or above.

If a student has multiple aims with the same status, the following criteria are used (in order) to select a single core aim:

- A level or AS level
- aim flagged as a 'core aim' by the school or college
- qualification included in 16 to 18 performance measures
- largest size (size of level 2 aims is divided by 4 before comparing to level 3 aims)
- level 3 over level 2

This is set out in the flowchart below.

**Figure 5: Flowchart which shows how the core aim is selected for students with all academic aims or academic aims and level 2 vocational aims**
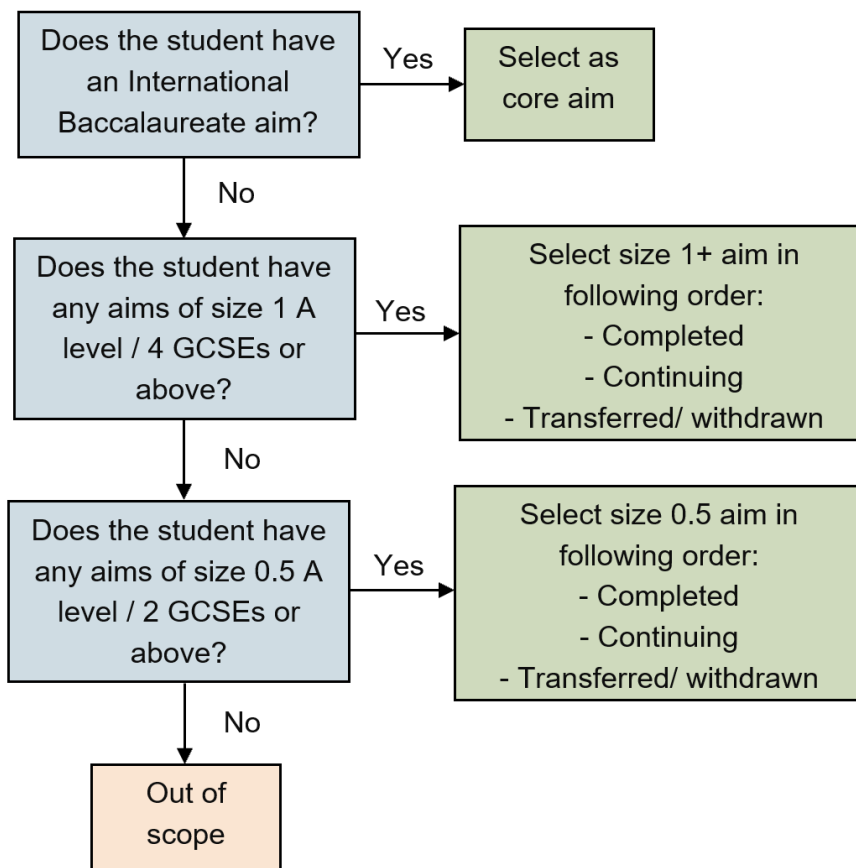

## All vocational aims

If a student has an aim which has been flagged by their school or college as being their 'core aim' (for funding purposes), it is selected for the retention measure. If a student has no aims flagged as a 'core aim', then any aim equivalent in size to 1 A level (level 3 programmes) or 4 GCSEs (level 2 programmes) or above is selected as their core aim, with preference being given to any aim recorded as 'completed'. If a student has no completed aims, then any aim recorded as 'continuing' is selected. If a student has no completed or continuing aims, then any aim recorded as 'withdrawn' or 'transferred' is selected as their core aim. If a student does not have any aims of size 1 A level or 4 GCSEs or above, the process below is followed for aims of size 0.5 A levels or 2 GCSEs or above.

If a student has multiple aims with the same status, the following criteria are used (in order) to select a single core aim

- qualification included in 16 to 18 performance measures
- aim of the same type as the majority of the student's attainment
- largest size (size of level 2 aims is divided by 4 before comparing to level 3 aims)
- level 3 over level 2

This process is set out in the flowchart below.

**Figure 6: Flowchart which shows how the core aim is selected for students with all vocational aims**

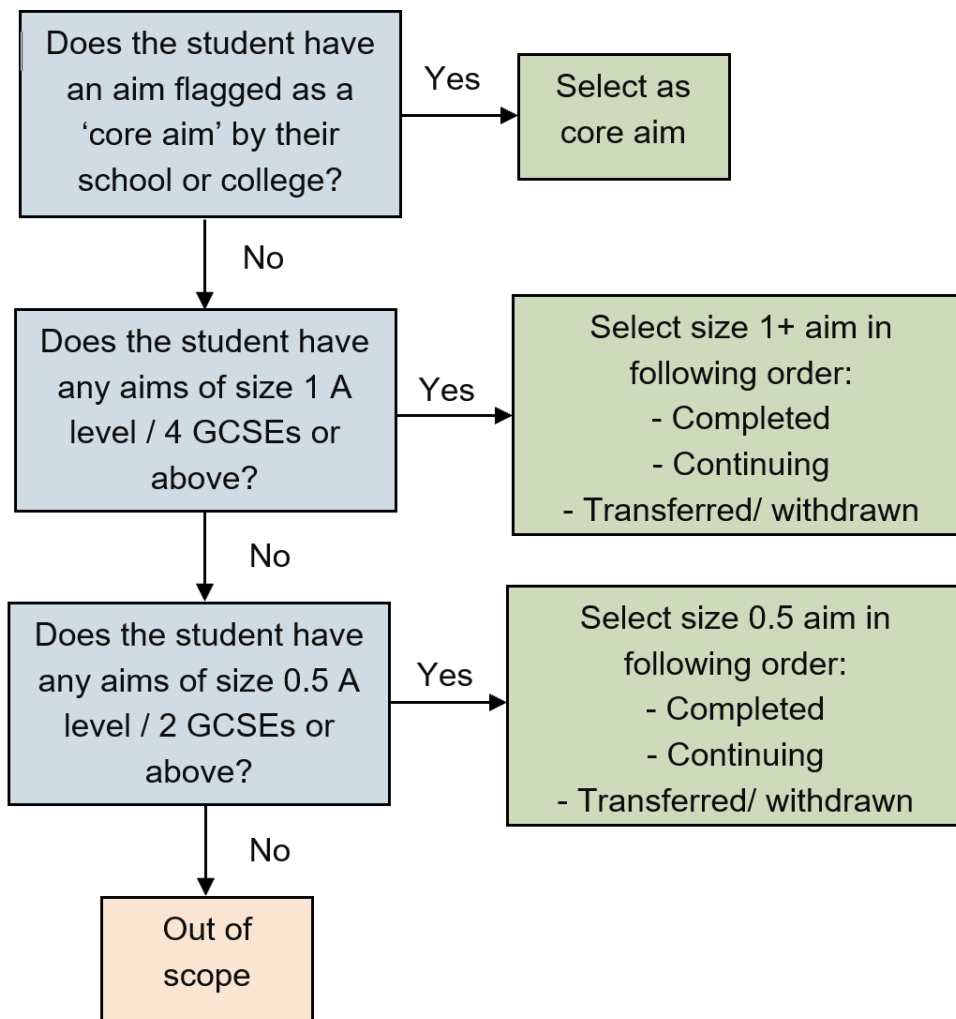

**Mixture of academic and vocational aims**

If a student has a tech level or applied general aim which has been flagged by their school or college as being their 'core aim' it is selected for the retention measure. If not and they are studying the International Baccalaureate, then this aim is selected as their core aim. If a student does not meet these first two criteria, then any aim of size equivalent to 1 A level (level 3 programmes) or 4 GCSEs (level 2 programmes) or above is selected as their core aim, with preference being given to any aim recorded as 'completed'. If a student has no completed aims, then any aim recorded as 'continuing' is selected. If a student has no completed or continuing aims, then any aim recorded as 'withdrawn' or 'transferred' is selected as their core aim. If a student does not have any aims of size 1 A level or 4 GCSEs or above, the process below is followed for aims of size 0.5 A levels or 2 GCSEs or above.

If a student has multiple aims with the same status, the following criteria are used (in order) to select a single core aim:

- qualification included in 16 to 18 performance measures
- aim of the same type as the majority of the student's attainment
- A level or AS level if the majority of the student's attainment is academic
- largest size (size of level 2 aims is divided by 4 before comparing to level 3 aims)
- level 3 over level 2

**Figure 7: Flowchart which shows how the core aim is selected for students with a mixture of academic and vocational aims**
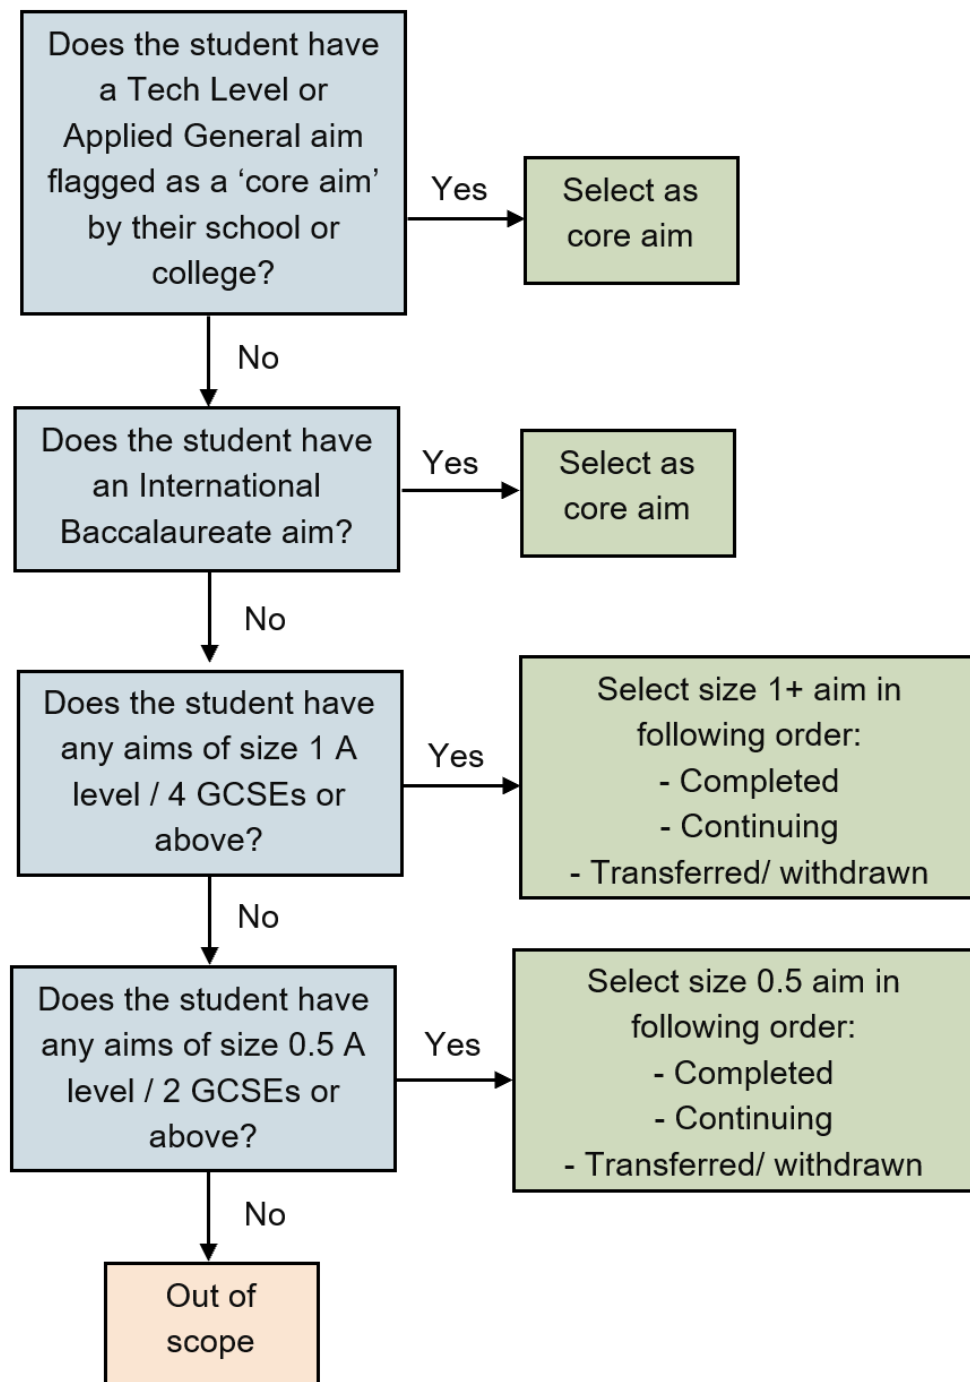

# Worked examples

The following tables give examples of how the core aim is selected and show whether the students count as retained or not retained in the headline retention measure.

**Example 1:** The VR2 aim is selected as the core aim since it is the only one with size of at least 1. This student does not count as retained as they withdrew from the core aim.

**Table 27: Headline retention measure – worked example 1**

| Qualification type | Size | 'Core aim' flagged by school/ college | Completion Status | Selected Core Aim | Retained? |
|---|---|---|---|---|---|
| AS level | 0.5 | | Completed | | |
| AS level | 0.5 | | Completed | | |
| AS level | 0.5 | | Completed | | |
| AS level | 0.5 | | Completed | | |
| VR2 | 1.3 | | Withdrawn | X | No |

**Example 2:** The tech level VR3 aim is selected as the core aim since there are multiple completed aims and the majority of the student's attainment is tech level. This student counts as retained.

**Table 28: Headline retention measure – worked example 2**

| Qualification type | Size | 'Core aim' flagged by school/ college | Completion Status | Selected Core Aim | Retained? |
|---|---|---|---|---|---|
| VR3 | 1.3 | | Completed | X | Yes |
| VR2 | 1.3 | | Completed | | |
| VR2 | 1.3 | | Completed | | |
| VR2 | 1.3 | | Continuing | | |
| A level | 1.0 | | Continuing | | |

**Example 3:** Although the IB qualification is the only one that the student did not complete, this is selected as their core aim due to its large size. This student does not count as retained as they withdrew from the core aim.

**Table 29: Headline retention measure – worked example 3**

| Qualification type | Size | 'Core aim' flagged by school/ college | Completion Status | Selected Core Aim | Retained? |
|---|---|---|---|---|---|
| AS level | 0.5 | | Completed | | |
| AS level | 0.5 | | Completed | | |
| AS level | 0.5 | | Completed | | |
| International Baccalaureate | 5.0 | | Withdrawn | X | No |

**Example 4:** The BTEC Diploma level 3 qualification (size 1) is selected as the core aim as this vocational aim has been flagged by the school or college as being the student's 'core aim'. This student does not count as retained as they withdrew from the core aim.

**Table 30: Headline retention measure – worked example 4**

| Qualification type | Size | 'Core aim' flagged by school/ college | Completion Status | Selected Core Aim | Retained? |
|---|---|---|---|---|---|
| Extended Project | 0.3 | | Completed | | |
| AS level | 0.5 | | Completed | | |
| AS level | 0.5 | | Completed | | |
| BTEC Diploma level 3 | 2 | | Withdrawn | | |
| BTEC Diploma level 3 | 2 | | Completed | | |
| BTEC Diploma level 3 | 1 | X | Withdrawn | X | No |

65

**Example 5:** One of the AS level qualifications is arbitrarily selected as the core aim as the student only had 0.5 size aims, all of which were completed. This student counts as retained.

**Table 31: Headline retention measure – worked example 5**

| Qualification type | Size | 'Core aim' flagged by school/ college | Completion Status | Selected Core Aim | Retained? |
|---|---|---|---|---|---|
| AS level | 0.5 | | Completed | X | Yes |
| AS level | 0.5 | | Completed | | |
| AS level | 0.5 | | Completed | | |
| AS level | 0.5 | | Completed | | |

# Additional retention measures

Alongside the headline retention measure we publish two additional retention measures:

- Returned and retained for a second year
- Retained and assessed

## Returned and retained for a second year

This additional measure shows the percentage of level 3 students who return to the same school or college for a second year of study and are retained in their second year. It highlights cases where, although students are retained, they have only completed, for example, AS levels and do not return for a second year of study.

The returned and retained for a second year measure is reported separately by cohort, but for level 3 cohorts only: academic, A level, applied general and tech level.

The following students are excluded:

- Students with a level 2 core aim (since many level 2 programmes are not expected to be two years long);
- Students who are academic age 18 in their first year in the institution (since they would be out of scope for inclusion in performance measures in their second year);
- Students who achieve a sizeable qualification (their level 3 qualifications of size 1 or above sum to 2 or more) in their first year in the institution (since they have already completed what is expected).

To be counted as returned and retained for a second year, a student must:

- be recorded as completing their selected core aim which is at least size 1 and in scope for inclusion in 16 to 18 performance measures;
- have been attending the institution for at least two academic years; or
- have completed a level 3 qualification of at least size 1 in their second (or third) year at the institution (this may be the selected core aim or another aim).

A student is deemed to have been attending an institution for at least two academic years if they meet any of the following conditions:

- they have aims at that institution in three academic years;
- they have aims at that institution in two academic years and have been at that institution for at least 602 days (based on the start and end dates of all their aims at that institution);
- they have aims at that institution in two academic years; they left in May, June or July and have been at that institution for at least 480 days.

The following tables give examples of whether the student counts as returned and retained for a second year and show situations where a student is excluded from the measure.

**Example 1:** This student had aims in the institution in two academic years and spent a total of 657 days in the institution. They completed an aim of size 1+ in their second year so they count as returned and retained for a second year.

**Table 32: Returned and retained measure – worked example 1**

| Year | Qualification type | Size | Aim start date | Aim end date | Completion Status | Selected Core Aim | Returned & retained for a 2nd year? |
|------|-------------------|------|----------------|--------------|-------------------|-------------------|-------------------------------------|
| 1 | VR3 | 1.5 | 09/09/2014 | 27/06/2015 | Completed | | |
| 2 | VR3 | 3.0 | 09/09/2015 | 26/06/2016 | Completed | X | Yes |

**Example 2:** This student had aims in the institution in two academic years and spent a total of 690 days in the institution. The selected core aim was completed in their first year but they have other level 3 aims of size 1+ in their second year so they count as returned and retained for a second year.

**Table 33: Returned and retained measure – worked example 2**

| Year | Qualification type | Size | Aim start date | Aim end date | Completion Status | Selected Core Aim | Returned & retained for a 2nd year? |
|------|-------------------|------|----------------|--------------|-------------------|-------------------|-------------------------------------|
| 1 | AS level | 0.5 | 02/09/2014 | 23/07/2015 | Completed | | |
| 1 | AS level | 0.5 | 02/09/2014 | 23/07/2015 | Completed | | |
| 1 | AS level | 0.5 | 02/09/2014 | 23/07/2015 | Completed | | |
| 1 | A level | 1.0 | 02/09/2014 | 23/07/2015 | Completed | X | Yes |
| 2 | A level | 1.0 | 01/09/2015 | 22/07/2016 | Completed | | |
| 2 | A level | 1.0 | 01/09/2015 | 22/07/2016 | Completed | | |
| 2 | A level | 1.0 | 01/09/2015 | 22/07/2016 | Completed | | |

**Example 3:** This student had aims in the institution in three academic years. Although they did not complete an aim of size 1+ in their second year, they did in their third year so they count as returned and retained for a second year.

**Table 34: Returned and retained measure – worked example 3**

| Year | Qualification type | Size | Aim start date | Aim end date | Completion Status | Selected Core Aim | Returned & retained for a 2nd year? |
|------|-------------------|------|----------------|--------------|-------------------|-------------------|-------------------------------------|
| 1 | AS level | 0.5 | 03/09/2013 | 19/07/2014 | Completed | | |
| 1 | AS level | 0.5 | 03/09/2013 | 19/07/2014 | Completed | | |
| 1 | AS level | 0.5 | 03/09/2013 | 19/07/2014 | Completed | | |
| 2 | AS level | 0.5 | 02/09/2014 | 18/07/2015 | Completed | | |
| 2 | AS level | 0.5 | 02/09/2014 | 18/07/2015 | Completed | | |
| 2 | AS level | 0.5 | 02/09/2014 | 18/07/2015 | Completed | | |
| 3 | A level | 1.0 | 01/09/2015 | 01/06/2016 | Completed | | |
| 3 | A level | 1.0 | 01/09/2015 | 01/06/2016 | Completed | | |
| 3 | A level | 1.0 | 01/09/2015 | 01/06/2016 | Completed | X | Yes |

**Example 4:** This student had aims in the institution in two academic years and spent a total of 682 days in the institution. They did not complete a qualification of size 1+ in their second year so they do not count as returned and retained for a second year.

**Table 35: Returned and retained measure – worked example 4**

| Year | Qualification type | Size | Aim start date | Aim end date | Completion Status | Selected Core Aim | Returned & retained for a 2nd year? |
|------|-------------------|------|----------------|--------------|-------------------|-------------------|-------------------------------------|
| 1 | AS level | 0.5 | 06/09/2014 | 04/03/2015 | Withdrawn | | |
| 1 | AS level | 0.5 | 06/09/2014 | 04/03/2015 | Withdrawn | | |
| 1 | AS level | 0.5 | 06/09/2014 | 19/07/2015 | Completed | | |
| 2 | AS level | 0.5 | 02/09/2015 | 18/07/2016 | Completed | | |
| 2 | AS level | 0.5 | 02/09/2015 | 18/07/2016 | Completed | | |
| 2 | AS level | 0.5 | 02/09/2015 | 18/07/2016 | Completed | X | No |

**Example 5:** This student had aims in the institution in two academic years but only spent 432 days in the institution. Even though they completed a qualification of size 1, they do not count as returned and retained for a second year since they were not in the institution for long enough.

**Table 36: Returned and retained measure – worked example 5**

| Year | Qualification type | Size | Aim start date | Aim end date | Completion Status | Selected Core Aim | Returned & retained for a 2nd year? |
|------|-------------------|------|---------------|-------------|-------------------|-------------------|------------------------------------|
| 1 | BD3 | 1.0 | 09/09/2014 | 02/07/2015 | Completed | X | No |
| 2 | BD3 | 2.0 | 09/09/2015 | 14/11/2015 | Withdrawn | | |

**Example 6:** This student had aims in the institution in one academic year. However, they are excluded from the returned and retained for a second year measure since they are aged 18 and although they may return for a second year, they will be too old to be included in performance measures.

**Table 37: Returned and retained measure – worked example 6**

| Year | Qualification type | Size | Aim start date | Aim end date | Completion Status | Selected Core Aim | Returned & retained for a 2nd year? |
|------|-------------------|------|---------------|-------------|-------------------|-------------------|------------------------------------|
| 1 | AS level | 0.5 | 03/09/2015 | 22/07/2016 | Completed | | |
| 1 | AS level | 0.5 | 03/09/2015 | 22/07/2016 | Completed | X | N/A |
| 1 | AS level | 0.5 | 03/09/2015 | 22/07/2016 | Completed | | |
| 1 | GCSE | 0.3 | 03/09/2015 | 22/07/2016 | Completed | | |

**Example 7:** This student had aims in the institution in one academic year. However, they are excluded from the returned and retained for a second year measure since their level 3 qualifications of size 1 or above sum to 2 or more.

**Table 38: Returned and retained measure – worked example 7**

| Year | Qualification type | Size | Aim start date | Aim end date | Completion Status | Selected Core Aim | Returned & retained for a 2nd year? |
|------|-------------------|------|---------------|-------------|-------------------|-------------------|------------------------------------|
| 1 | AS level | 0.5 | 04/09/2015 | 10/07/2016 | Completed | | |
| 1 | A level | 1.0 | 04/09/2015 | 10/07/2016 | Completed | | |
| 1 | A level | 1.0 | 04/09/2015 | 10/07/2016 | Completed | X | N/A |
| 1 | A level | 1.0 | 04/09/2015 | 10/07/2016 | Completed | | |

**Example 8:** This student had aims in the institution in two academic years and spent a total of 671 days in the institution. However, they are excluded from the returned and retained for a second year measure since their selected core aim is a level 2 qualification.

**Table 39: Returned and retained measure – worked example 8**

| Year | Qualification type | Size | Aim start date | Aim end date | Completion Status | Selected Core Aim | Returned & retained for a 2nd year? |
|------|--------------------|------|----------------|--------------|-------------------|-------------------|-------------------------------------|
| 1 | AS level | 0.5 | 09/09/2014 | 25/07/2015 | Completed | | |
| 1 | AS level | 0.5 | 09/09/2014 | 25/07/2015 | Completed | | |
| 2 | VR2 | 1.3 | 04/09/2015 | 10/07/2016 | Completed | X | N/A |

## Retained and assessed

This additional measure shows the percentage of students who are retained to the end of their course and are assessed. This allows monitoring of whether students are effectively completing their study rather than merely being enrolled at an institution for a certain period of time.

A student is considered retained and assessed[16] as long as they have an exam entry that matches on the level of and is at least the same size as the core aim qualification selected for the headline retention measure. For example, if a student's core aim is an A level in Biology with size of 1, we do not require it to match to a Biology A level but just one of the same size. Similarly, we also do not require the qualification type of the result to match the aim as long as it is of the same size. For example, a student with a tech level aim of size 1 is considered a match to an applied general result of size 1.

The retained and assessed measure is reported separately for each cohort: at level 3, academic, A level, applied general and tech level; and technical certificates at level 2.

The following tables provide examples of whether a student is retained and assessed and shows situations where a student would not be counted.

**Example 1:** The student was retained in an A level core aim and was assessed in five exams. Two of these, the Applied General and Tech level assessments are of sufficient size and level to allow the student to be retained and assessed.

**Table 40: Retained and assessed measure – worked example 1**

|  | Type / qualification | Size | Level |
|---|---|---|---|
| **Core aim** | A level | 1 | Level 3 |
| **Exams taken** | AS level | 0.5 | Level 3 |
| Exams taken | AS level | 0.5 | Level 3 |
| Exams taken | AS level | 0.5 | Level 3 |
| Exams taken | Tech level | 1 | Level 3 |
| Exams taken | Applied general | 1 | Level 3 |
| **Retained and assessed?** | **Yes** |  |  |

---

[16] Students that have been assessed but are recorded as not retained in the headline retention measure will not be included. Students need to be both retained and assessed to be included in the retained and assessed supporting measure.

**Example 2:** The student was retained in a BTEC Diploma level 3 qualification and was assessed in three exams. However, this student is not retained and assessed as the individual A level assessments do not match the size of the BTEC Diploma level 3.

**Table 41: Retained and assessed measure – worked example 2**

|  | Type / qualification | Size | Level |
|---|---|---|---|
| **Core aim** | BTEC Diploma Level 3 | 2 | 3 |
| **Exams taken** | A level | 1 | 3 |
| Exams taken | A level | 1 | 3 |
| Exams taken | A level | 1 | 3 |
| **Retained and assessed?** | **No** | | |

**Example 3:** The student was retained in a BTEC Certificate level 2, and was assessed in three exams. However, this student would not be considered retained and assessed as even though the Tech level qualification is larger than the core aim, it is at a different level.

**Table 42: Retained and assessed measure – worked example 3**

|  | Type / qualification | Size | Level |
|---|---|---|---|
| **Core aim** | BTEC Certificate level 2 | 1 | 2 |
| **Exams taken** | AS level | 0.5 | 3 |
| Exams taken | AS level | 0.5 | 3 |
| Exams taken | Applied general | 1.5 | 3 |
| **Retained and assessed?** | **No** | | |

# Destination measures

## Headline destination measure

The headline destination measure shows the percentage of students staying in education, employment or training for at least two terms in the year after their last allocation to a school or college at 16 to 18.

The measure is published on a two-year time lag compared to other performance measures, to allow us to see whether students have sustained their destination. The data published in the October 2024 statistical release and 2024 performance measures reports on students who were deemed to have reached the end of 16 to 18 study in the 2021 to 2022 academic year and identifies their education and/or employment destinations in October to March of their destination year, or any six months in the year for apprenticeships.

The 'trigger' rules for deciding when students have reached the end of 16 to 18 study changed in the 2020 to 2021 academic year (see the section on [Students included in 16 to 18 performance measures](#)). The impact of this, for one year only, was to reduce the number of students reported in the cohort completing 16 to 18 study in 2020 to 2021 academic year. This change particularly impacted students in state-funded mainstream colleges, who are more likely to spend more than two years in the same college. These numbers are now increased again for the 2022 cohort to similar levels to before this change, however the makeup of the cohort is different to previous years. We have made this clear to users with guidance alongside the data.

### How the headline measure works

The headline destination measures cohort aims for full coverage by including young people aged 16, 17 or 18 who were deemed to be at the end of 16 to 18 study and had been allocated to a school or college, regardless of qualifications entered.

To be counted in the headline measure as having a positive destination, young people must be recorded as having participation in one of the following:

- Six consecutive months at any point in the year (from August to July) in an apprenticeship;
- all of the first two terms of the academic year (October to March) at one or more education destinations; or
- six consecutive months from October to March in employment, although if there is no activity in March then April may be substituted.

Young people with a combination of education and employment, or apprenticeships, meeting the sustained participation criteria are also counted as having a positive destination in the measure.

## Data sources

Data used to compile the measure come from the [National Pupil Database (NPD)](#) and [Longitudinal Education Outcomes (LEO)](#) datasets with individual student level data matched to a range of administrative sources on education participation, employment records and claims of out-of-work benefits.

Five administrative data sources used in compiling the national pupil database have been used to determine pupils' education destinations:

- individualised learner record (ILR) covering English further education providers and specialist post-16 institutions
- school census covering English schools
- awarding body data
- alternative provision census
- Higher Education Statistics Authority (HESA) data covering UK universities and other higher education institutions (including alternative providers)

Employment data and out-of-work benefit data have been linked to the national pupil database to form the longitudinal education outcomes (LEO) dataset. LEO data is used to calculate employment destinations. Two administrative datasets are used:

- employment data from His Majesty's Revenue and Customs (HMRC)
- out-of-work benefit data from the Department for Work and Pensions (DWP)

A hierarchical series of rules is used to determine whether students meet the criteria for sustained participation and the specific destinations they are reported under if more than one definition is met.

**Figure 8: Flowchart which shows how destinations are allocated in the headline destination measure**

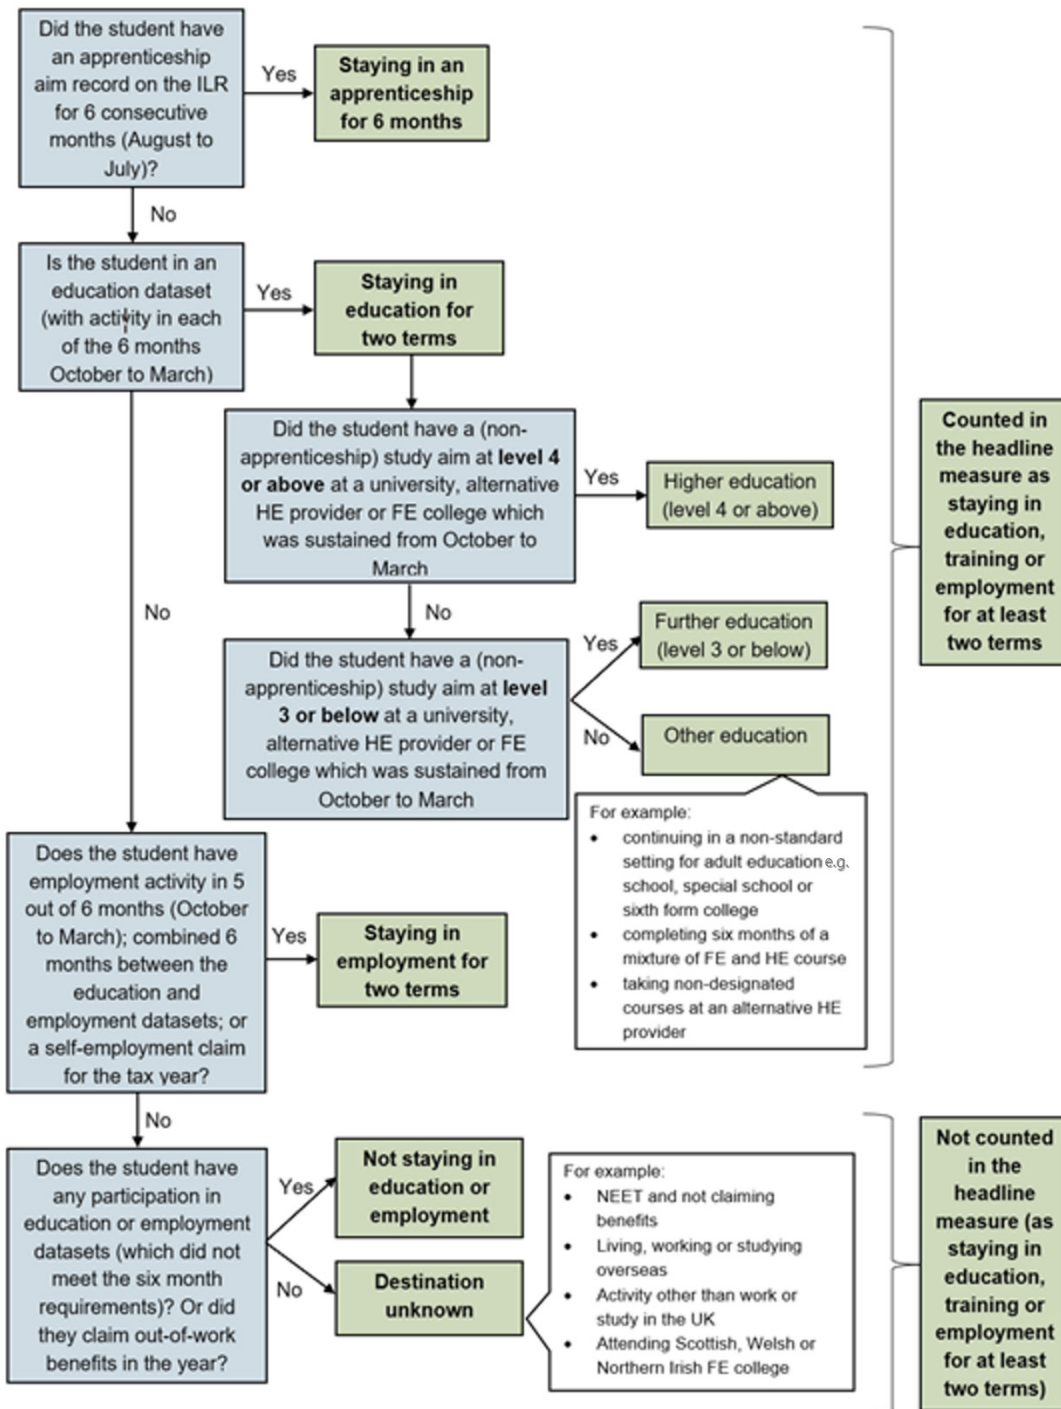

We are continuing to work with other government departments and with analysts developing the Longitudinal Education Outcomes dataset to improve the scope of activity that can be captured. Strands under development include increasing the range of benefits included and the quality of the employment information, as well as linking to information on Scottish and Welsh schools and colleges. We are hopeful that this will increase our coverage beyond 95% in future years and more fairly reflect the outcomes of certain institutions.

## Included institution types

Destinations are reported for students completing 16 to 18 study at state-funded mainstream schools and colleges. The national and local authority totals on the performance measures website include state-funded mainstream schools and colleges only. Destinations are not reported in the 16 to 18 performance measures for independent schools or special schools (including maintained, non-maintained and independent special schools).

Because destination measures are calculated for students who reached the end of 16 to 18 study at the school or college two years previously, not all providers with attainment results have destination measures reported.

Schools and colleges that have both attainment results and destinations include:

- providers which have remained open throughout the period and have not undergone any changes to school type
- providers which have become a converter academy
- providers which have undergone a merger (one continuing provider 'absorbs' another)

Schools and colleges which have attainment results but no destinations reported include:

- providers which have opened (as entirely new schools or colleges)
- providers which have become a sponsored academy
- providers which have formed from an amalgamation (two or more providers come together to form a 'new' provider)
- providers which did not have students completing 16 to 18 study two years previously (this may include schools or colleges which were new)

## Breakdown of data by level of study

Destination results are broken down by level so that schools and colleges with a high proportion of level 2 and below students are not unfairly compared against those that primarily cater to level 3 students. When a student has studied a mixture of qualification types at their allocated institution, the level they are reported against is determined by the size of the exams they have entered at each level. Unapproved qualifications are however only taken into account when the size of approved qualifications for that student totals to less than half an A level (at level 3) or one GCSE (at level 2). The higher level is chosen in the event of a tie.

## Flexible destination years

The majority of level 3 students (about 95%) are allocated to the school or college they are reported against in the same year as which they were deemed to have reached the end of 16 to 18 study. At level 2 and below however a significant proportion (about 20%) of the cohort are not allocated to a school or college in the year in which they are deemed to have reached the end of 16 to 18 study (for example, by having reached the age of 18 but without having completed qualifications equivalent in size to two A levels). We therefore use a 'flexible destination year' methodology, to ensure that we include level 2 students in this situation.

The figure below shows the seven possible attendance patterns over the 16 to 18 study period for the 2021 to 2022 cohort who were reported on in October 2024. Students who were not allocated to their institution in the year before triggering (groups 3, 6 and 7) are included but with the destination activity taken from an earlier year than the majority of the cohort (groups 1, 2, 4 and 5).

This means that not all destinations reported will have taken place in the same year. It allows more students to be included, and it more accurately reflects the influence of the school or college in achieving that destination (which is important for accountability purposes), and it measures the destinations at a more meaningful point in time than if the 2022/23 academic year was uniformly used for all student destinations.

**Table 43: Diagram showing the seven possible permutations of institution allocation (Xs / purple blocks) in each of the years before triggering as end of 16 to 18 study (blue lines between 2021/22 and 2022/23 columns). Purple blocks / Xs represent a year of allocation; green blocks / Os show the subsequent year chosen for consideration of destination activity.**

|         | 2019/20 | 2020/21 | 2021/22 | 2022/23 |
|---------|:-------:|:-------:|:-------:|:-------:|
| Group 1 | X       | X       | X       | O       |
| Group 2 |         | X       | X       | O       |
| Group 3 | X       | X       | O       |         |
| Group 4 | X       |         | X       | O       |
| Group 5 |         |         | X       | O       |
| Group 6 |         | X       | O       |         |
| Group 7 | X       | O       |         |         |

# Additional destination measures

## Progression to higher education or training measure

In addition to the headline destination measure, we also publish the 'Progression to higher education or training' measure.

The measure shows the percentage of Level 3 students from each school or college that continue to degrees, higher technical courses and higher apprenticeships, as well as a value-added score that shows whether this demonstrates good progress based on the students' prior attainment and qualification type. Degrees, higher technical courses and higher apprenticeships are treated equally as level 4+ destinations. The measure also contains a Higher Education Institution (HEI) breakdown that shows the number of students progressing to a top-third HEI, determined by the average UCAS points of successful applicants. This shows which schools and colleges do well at supporting their students to secure opportunities at the most selective higher education providers.

We will no longer publish the following HEI breakdowns, which we have published in previous years:

- The percentage of students that progress to Russell Group universities.
- The percentage of students that progress to Oxford and Cambridge universities.

The progression to higher education or training measure is published on a three-year time lag compared to other results-based performance measures, to allow us to see if students sustain their destination, including students that take a gap year after 16 to 18 study. This means that in destinations data published in October 2024, this measure reported mostly on level 3 students that completed 16 to 18 study during the 2020 to 2021 academic year.

As there were no results-based performance measures published for this cohort of students, schools and colleges did not have the opportunity to check that we are reporting on the right cohort of students as part of the usual checking exercise. The progression to higher education or training measure for students completing 16 to 18 study in 2021 (published in October 2024) was also affected by the change we made to the rules which trigger students for inclusion in performance measures (see the section on [Students included in 16 to 18 performance measures](#)). In the first year we made this change (2021), lots of students that would normally have been triggered by the 'two years at the same provider' rule were not included in the cohort, and without a checking exercise for schools and colleges to add students back in, this saw a large reduction in

numbers for this cohort[17]. This change particularly impacted students in state-funded mainstream colleges, who are more likely to spend more than two years in the same college. Caution should therefore be taken when comparing data between providers for this cohort. We have made this clear to users with guidance alongside the data.

For the destinations measures due to be published in October 2025, we will need to review how, and if, we publish the 'Progression to Higher Education and Training' measure, as we would need to use KS4 prior attainment data from 2020, which the previous government committed not to use to calculate future performance measures, given the impacts of COVID-19. We will provide further information in due course.

### Students in scope and progression criteria

The cohort for the 'Progression to higher education and training' measure consists only of level 3 students on the grounds that students of level 2 courses and below are not expected to progress directly to a level 4 or higher destination. Students of academic qualifications (such as A levels), applied general qualifications, tech levels and unapproved level 3 qualifications are in scope.

A student is deemed to have successfully progressed to a level 4 or higher destination if they sustain a level 4 or higher course in an HE or FE institution, a level 4 or above apprenticeship, or a mixture of the two for at least six months within the two-year period following their allocation to a school or college at 16 to 18.

### Included institution types

Destinations are reported for students completing 16 to 18 study at state-funded mainstream schools and colleges. Only students at state-funded mainstream schools and colleges are included in the cohort for determining the value-added progression scores. Because destinations are determined for pupils who reached the end of 16 to 18 study at the school or college up to three years previously, not all providers with attainment results have destination measures reported.

### How the progression measure works

The entire level 3 cohort is first grouped according to their qualification type and their prior attainment at KS4. The prior attainment for each student follows the same methodology as is used for the 16-18 value-added measure (average GCSE score for students of academic qualifications; average GCSE and vocational equivalents score for students of other qualification types) but students are then placed into deciles.

---

[17] This effect was prominent in the first year we made this change. In subsequent years, there has not been the same drop in numbers because students not included in the data because of the removed rule are replaced by students not counted by the removed rule in the previous year.

Qualification type for each student is decided using the same methodology as the standard destination measure (using the size of qualifications entered), however students of academic and applied general qualifications are grouped together as they have the same expectation for progression to higher education or training.

Within each combination of qualification type and prior attainment decile the number of students that progress to a level 4 or higher destination is divided by the size of the group to obtain the national average for that type of student. Each student then scores +1 if they progress to level 4+, 0 otherwise, and the national expectation for that student is subtracted. For example, an A level student in the 9th prior-attainment decile might have an 85% probability of progressing to level 4+ according to the national average. If that student does progress then they score 1 - 0.85 = +0.15. If they do not progress then they score 0 – 0.85 = -0.85. These individual scores are then averaged for the school or college and the result multiplied by 100 to convert into percentage points. Thus a value-added score of e.g. +12 represents a 12 percentage point increase on progression to level 4+ when compared to the national average for students similar to that institution's intake.

Level 4+ education or training must be sustained for six consecutive months at any point within the two-year destination window to count as a positive destination. When a sustained period of activity begins in or extends into the second year of the window, that second year will be used to determine the reported destination type such as whether the education or training was an apprenticeship/level 4 or 5 course/degree, and whether a Top third flag should be applied. Otherwise, the first year will be used.

# Information included in the progression to higher education and training measure

- **Progression Score:** This score tells you the proportion of students from this school or college that go on to degrees, higher apprenticeships or other study at level 4 or above after leaving advanced level qualifications (level 3), taking prior attainment into account. For example, if a school/college has more students go on to higher education or training than other schools with similar-ability intakes then it will receive a positive progression score.
- **Confidence intervals:** schools and colleges with small cohorts might be more subject to having their score significantly altered by the destination intentions of a few individual students, while larger cohorts will likely see these effects average out. Confidence intervals are provided which represent the range we think the true score is likely to lie in.
- **Total number of students:** The school or college's total cohort size of students that completed 16 to 18 study and entered predominantly level 3 qualifications.
- **Students progressing to higher education or training:** The proportion of 16 to 18 students that progressed to degrees, higher apprenticeships or other study at level 4 or above for at least 6 consecutive months in the 2 years after taking advanced level qualifications (level 3) at this school or college.
- **Higher apprenticeships:** Proportion of students that sustained a higher apprenticeship destination. A higher apprenticeship is at level 4 or higher and a vocational equivalent to a foundation, bachelor's or post-graduate degree.
- **Degrees:** Proportion of students that sustained a degree destination. Degree destinations include any study at level 6 or higher such as bachelor degrees, graduate diplomas, and post-graduate degrees.
- **Top third higher education institutions:** Proportion of students that sustained a destination at a top-third higher education institution (HEI). This is those HEIs that, when ranked by average UCAS tariff score of entrants across their best 3 A levels, represent 1/3 of that year's total HE entrants.
- **Other study at level 4 or 5:** Other study at level 4 or 5 destinations include those students studying qualifications such as foundation degrees, Higher National Certificates (HNCs) and Higher National Diplomas (HNDs).
- **Students that took academic and applied general qualifications:** These students predominantly studied applied general qualifications or academic qualifications such as A levels at this school or college. This table shows their rate of progression from these qualifications to any higher education or training after 16 to 18 (level 3) study.
- **Students that took technical qualifications:** These students predominantly studied technical qualifications such as level 3 diplomas and advanced technical certificates, equivalent to A levels, at this school or college. This table shows their rate of progression from these qualifications to any higher education or training after 16 to 18 (level 3) study.
- **Students taking qualifications not included in 16 to 18 performance measures:** These students studied qualifications that are similar in level to A

levels and equivalent technical qualifications, but do not meet the criteria for being included in other 16 to 18 performance measures.

## Suppression of destination data

The Code of Practice for Statistics requires us to take reasonable steps to ensure that our published or disseminated statistics protect confidentiality. Values may also be suppressed for small cohorts.

## Supporting information

Further information is published in the [Destination measures statistical release on Explore Education Statistics](#) showing national trends and characteristics data such as special educational needs, ethnicity, disadvantage and gender. A detailed methodology is available from this page.

# English and maths progress measures (suspended until 2024 to 2025 performance measures at the earliest)

When published previously, these measures showed, for students that did not achieve a grade 4 or above in English or maths GCSE at KS4, how much progress students made between their KS4 GCSE result and any re-takes they did in English or maths GCSE or equivalent at 16 to 18.

We will not produce and publish a 16 to 18 English and maths progress measure for students completing 16-18 study in the 2023 to 2024 academic year.

This is because the information that we use to count students in scope for these measures is either their KS4 English and/or maths GCSE grade, or their grade in an English and/or maths GCSE, or equivalent, at a previous 16 to 18 provider. This also provides the starting point for calculating the average change in grade. For the 2023 to 2024 performance measures cohort, many of these grades will have been awarded between September 2020 and August 2021[18], which the previous government committed not to use in future performance measures. A high number of students would still have KS4 prior attainment date from summer 2021 because of the high proportion of students in scope for this measure that take three years to complete their 16 to 18 study.

We will return to producing the English and maths progress measure for the 2024 to 2025 academic year at the earliest.

The Condition of Funding remains in place, and will be based on a student's individual prior attainment as normal, regardless of which year this was achieved. The Condition of Funding requires that students aged 16 to 18 (and 19 to 25 with an education, health and care (EHC) plan), who do not hold a GCSE grade 9-4, or equivalent qualification in maths and English, and are doing a study programme of 150 hours or more, must study maths and/or English as part of their programme, in each academic year. Providers have the freedom to determine when a student is ready to sit exams and assessments in these subjects to support their progress to further study, training and skilled employment.

For information, the English and maths progress methodology that we have used in previous years is set out in Annex B.

---

[18] This is because of the high proportion of students in scope for these measures that take three years to complete.

## Additional advanced level maths measure

As for the English and maths progress measure, this measure relies on KS4 prior attainment data to count students in scope for the measure. As previously announced, we will not produce or publish this measure for 2023 to 2024.

# T Level accountability measures

## Background

T Levels have been taught since September 2020 and are equivalent to 3 A levels. These 2-year courses have been developed in collaboration with employers and business so that the content meets the needs of industry and prepares students for skilled employment. You can find out more information about T Levels at Introduction of T Levels - GOV.UK (www.gov.uk).

## Attainment measures

The previous government announced an intention to introduce T Level attainment measures for the cohort of students completing 16 to 18 studies in the 2023 to 2024 academic year. It had signalled that this attainment measure would show a school or college's attainment in each of the Technical Qualification (TQ) elements of the T Level, separately; showing average point score per entry for each TQ element, also expressed as a grade. This data was shared directly with schools and colleges as part of the data checking exercise in October 2024, and the measures were due to be published on the CSCP service in early 2025.

We keep all performance measures under review, including those we are yet to introduce. On review, and following stakeholder engagement, we have decided to pause the publication of the planned T Level attainment measure to allow time to develop an overall result measure. This is to give a fairer representation of T Level attainment, given the changes made to how overall grades are derived since the original plans were announced. As such no information about T Level attainment will be published on CSCP for the 2023 to 2024 academic year.

We will instead look to introduce a T Level attainment measure on CSCP which captures overall T level attainment, in future years. We will continue to work with stakeholders as we develop this measure, and more information will be shared in due course.

Until the new attainment measure is available, we will publish provider-level data on T Level attainment on Explore Education Statistics for transparency. This will be an extension to existing reporting on overall T Level results based on the Manage T Level results service in the 'Provisional T Level results' statistical release. As with data published on T Level results day in August, this will show for all T Levels taken within a provider, the count, percentage and cumulative percentage of each grade (Distinction*, Distinction, Merit, Pass, Partial achievement and Unclassified), including a breakdown by pathway. This data has been shared securely with providers in advance using View Your Education Data (VYED), and will be published in spring 2025. The data will not include average point scores.

# Other T Level measures

We will share information on the introduction of other T Level measures in due course.

# Performance measures for disadvantaged students

All headline measures are also shown for disadvantaged students in a school or college only.

The disadvantage classification follows that used at KS4. Disadvantaged students are all students who were in receipt of pupil premium when they were in their last year of KS4. Note, the pupil premium is distinct from the Service Pupil Premium (SPP); students eligible for the SPP but not in receipt of pupil premium will not be identified as disadvantaged.

Except for destination measures, measures for disadvantaged students do not include students who were not reported at the end of KS4 – for example, because they came from overseas. Students who were known to be at independent schools in their last year of KS4 are treated as non-disadvantaged. However, destination measures group all students not known to be disadvantaged at the end of key stage 4 as "all other students".

Performance measures for disadvantaged students are not calculated for independent schools.

# Multi-Academy Trust measures

For 2023 to 2024 academic year, we will publish two measures at MAT level:

- 16-18 value added (progress) measures;
- Attainment measures (APS per entry).

We produce 16 to 18 MAT measures for the Academic and Applied general cohorts only.

We will also produce breakdowns of these measures for disadvantaged pupils - provided that a MAT has results from disadvantaged students to meet the inclusion criteria.

# Eligibility for inclusion in the MAT measures

We publish performance data at MAT level for trusts that are sufficiently well established to a) have had time to have an impact on the performance of the academies within the MAT and b) so that aggregate data tells you more than the individual institution data would.

For 2023 to 2024, for each cohort (Academic, Applied General) we will produce measures for MATs:

- that have at least three academies with results, in that cohort, at 16 to 18, and
- where those schools have been with the MAT for at least three academic years (defined as having joined that MAT before 14 September 2021).

This means that we do not produce measures for all MATs. It also means that where we do produce measures for a MAT, the measures may be based on the results from only some of their academies (i.e. a MAT may have at least three academies, that have been part of the MAT for 3 or more years, with results at 16 to 18, but also have academies with results at 16 to 18 that have been with the MAT for less than 3 years). Additionally, a MAT may be reported for one cohort but not another, if it satisfies the above eligibility criteria for one cohort (e.g. Academic) but doesn't satisfy the criteria for another cohort (e.g. Applied General).

The examples below show how the inclusion criteria would apply for MATs with various compositions.

**Example MAT 1**

**Table 44: Worked example for inclusion criteria for example MAT 1**

| Academy name | Years in MAT | 16 to 18 Academic cohort results? | 16 to 18 Applied general cohort results? |
|---|---|---|---|
| Red Academy | 7 | Yes | Yes |
| Blue Academy | 4 | Yes | Yes |
| Green Academy | 2 | Yes | Yes |
| Yellow Academy | 2 | Yes | Yes |

MAT 1 would not be reported, because while they have four academies, with results for the 16 to 18 cohorts, only two of the academies have been in the MAT for three or more years.

**Example MAT 2**

**Table 45: Worked example for inclusion criteria for example MAT 2**

| Academy name | Years in MAT | 16 to 18 Academic cohort results? | 16 to 18 Applied general cohort results? |
|---|---|---|---|
| North Academy | 6 | Yes | Yes |
| West Academy | 5 | Yes | Yes |
| South Academy | 4 | Yes | No |
| East Academy | 2 | Yes | Yes |

MAT 2 would be reported for the academic cohort, because they have three academies, with academic results, that have been in the MAT for three or more years. However, MAT 2 would not be reported for the applied general cohort, as they do not have three academies with applied general results that have been in the MAT for three or more years.

The measures cover state-funded mainstream academies (including academies with sixth forms, 16-19 academies, University Technical Colleges (UTCs) and studio schools) within MATs. Special schools, pupil referral units, alternative provision academies and alternative provision free schools are not included.

# Calculating the 16-18 value added (progress) measure at MAT level

We will produce the 16-18 value added measure at MAT level, for the Academic and Applied general cohorts.

We will calculate 16-18 value added measures at MAT level by aggregating up data for students across the component institutions of a MAT. The 16-18 Value Added measures section of this guidance has more information on how we calculate institution level progress scores, and the aggregation to MAT will work in the same way.

# Calculating the attainment measure at MAT level

We will produce the attainment measure (APS per entry) at MAT level, for the Academic and Applied general cohorts.

The Average Point Score per entry for a MAT is based on the weighted average of its individual academies' respective APS per entry scores. Weighting is employed when calculating the average to ensure an academy's contribution to the overall score is proportional to its size. At 16 to 18, size is not determined by the number of pupils but rather the number of entries. This is because pupils may take different numbers of qualifications, and qualifications themselves can have varying size (with larger qualifications counting as larger entry).

The example below shows how this weighting is applied to calculate the measures:

**Example MAT 2**

Table 46: Worked example for calculating APS at MAT level for example MAT 2

| Academy | Years in MAT | Included in calculation? | APS per entry | Total Entries |
|---|---|---|---|---|
| North Academy | 6 | Yes | 41 | 80 |
| West Academy | 5 | Yes | 38 | 90 |
| South Academy | 4 | Yes | 42 | 100 |
| East Academy | 2 | No | 36 | 110 |

We would calculate the APS per entry for MAT 2 in the following way:

$$MAT\ APS\ per\ entry = \frac{41 * 80 + 38 * 90 + 42 * 100 + Not\ Counted}{80 + 90 + 100 + Not\ Counted}$$

Note that 'Not Counted' refers to East Academy, which is 'not counted' because it hasn't been in the MAT for 3 or more years.

# Additional information published on the school and college performance measures website

## Subject entries information

We will publish a table on CSCP showing the number of entries into qualifications that count in the attainment performance measures for the 2023 to 2024 academic year.

## Apprenticeship reporting

Qualification achievement rates (QARs) for 16 to 18 year old apprenticeships are shown alongside the performance measures detailed in this guidance, on the school and college performance measures website.

This data is currently published in National Achievement Rate Tables, updated annually at the following link:

https://explore-education-statistics.service.gov.uk/find-statistics/apprenticeships-and-traineeships

The QAR shows the proportion of apprenticeships in an institution that were achieved, calculated as the number achieved in an institution divided by the number started for the relevant year. The relevant year is defined as the 'Hybrid End Year', which is the later of the Achievement Year, Expected End Year, Actual End Year or Reporting Year of an apprenticeship. Students who start an apprenticeship but transfer to another qualification within the same institution are excluded from the calculation. Full details of the methodology are available at this link:

https://www.gov.uk/government/collections/qualification-achievement-rates-and-minimum-standards

There are two significant differences between the QAR and the other 16 to 18 performance measures reported on the school and college performance measures website. Firstly, QAR reporting is not subject to allocation rules (see section on allocation rules). This means that in the QARs a student could be reported against more than one institution in a given academic year (in this case if they started apprenticeship aims in different institutions). Secondly, the cohort of students in the apprenticeship QAR are academic age 16 to 18 when they started the apprenticeship framework, so unlike other performance table measures could be aged 19+ when they achieved (or did not achieve) the apprenticeship framework.

# Data sources

## Attainment and retention measures

These are the data sources for the 16 to 18 performance measures for the 2023 to 2024 academic year:

- Student 'on roll' status, for allocation of students to schools: spring school census for 2023/24, 2022/23 and 2021/22. For general guidance on the school census click here: https://www.gov.uk/guidance/school-census
- Student core aim, for allocation of students to colleges: ILR SN10 for 2023/24; ILR SN14 for 2022/23 and 2021/22. For general guidance on ILR click here: https://www.gov.uk/government/collections/individualised-learner-record-ilr
- Students' learning aims, for retention measures: ILR SN14 for 2023/24, 2022/23 and 2021/22.
- Learning Aims from the autumn school census relating to education completed in 2023/24, 2022/23 and 2021/22 academic years for retention measures.
- School census funding relating to education completed in 2023/24, 2022/23 and 2021/22 academic years for retention measures.
- Students' exams in the 16 to 18 phase: awarding organisation data for 2023/24 and previous years.

## Destination measures

Students who had previously been recorded as being at the end of 16 to 18 study are matched to a wide range of data sources that contain information about their activity in the following academic year.

Matching takes place at individual level using personal identifiers such as name, date of birth and postcode. Information on the students' activity throughout the following academic year, as recorded across these administrative datasets, is used to determine whether they sustained an education or employment destination, and the specific category they are recorded against.

Many of the datasets used to determine whether a student continued participating in education form part of the National Pupil Database (NPD):

- individualised learner record (ILR) covering English further education (FE) sector colleges, other FE providers and specialist post-16 institutions (SPIs).
- school census (SC) covering state-funded schools in England. This includes state-funded and non-maintained special schools and pupil referral units (PRU) and the alternative provision (AP) census.
- awarding body data for independent schools

- Higher Education Statistics Agency (HESA) data covering United Kingdom higher education institutions and higher education alternative providers

The Longitudinal Educational Outcomes (LEO) dataset extends the national pupil database by linking employment, earnings and benefits data from other government departments to education data at an individual level:

- employment data from HM Revenue and Customs (HMRC) including self-employment
- out-of-work benefit data from the Department for Work and Pensions (DWP)

These sources give reliable information about participation throughout the year and do not rely on self-report or activity at a single point in time. Activity was captured in these sources for 95% of 16 to 18 students in the 2022 to 2023 academic year. We cannot include evidence from sources beyond those listed at this point in time, but will continue to investigate further datasets for future years.

Additional information from the Universities & Colleges Admissions Service (UCAS) showing students having an accepted deferred offer for a UK higher education institution is shown alongside their recorded activity in the year.

# Annex A: 16-18 performance measures for 2023 to 2024

The table below shows the performance measures, breakdowns and information that will be published on Compare School and College Performance for 2023/24. There are further performance data and measures available as a downloadable data file.

All measures relate to students completing 16-18 study in the 2023 to 2024 academic year, unless otherwise specified.

| | Cohorts | Measures |
|---|---|---|
| **Headline measures** | Level 3 A level<br>Level 3 Academic<br>Level 3 Applied General<br>Level 3 Tech Level<br><br>**All students**, and broken down to show **disadvantaged students** only, for each cohort. | **Value added (progress) measure** - how well students did in their 16-18 qualifications compared to other students with similar prior attainment nationally. |
| | Level 3 A level<br>Level 3 Academic<br>Level 3 Applied General<br>Level 3 Tech Level<br>Level 2 Technical Certificate<br><br>**All students**, and broken down to show **disadvantaged students** only, for each cohort. | **Attainment measure** – Average Point Score (APS) per entry, also expressed as an average grade.<br>**Retention measure** – Percentage of students retained to the end of the core aim of their study programme. |
| | All students at all levels (completing 16-18 study in 2021/22) | **Destination measure** – Percentage of students progressing to any sustained education, apprenticeship or employment destination following 16-18 study. |
| **Additional measures** | Level 3 A level | **Best 3 A levels** - Average points and grade across students' best 3 A levels.<br>**AAB or higher, including at least 2 facilitating subjects** – the percentage of students that achieved AAB or higher in their A levels, where their A levels included at least 2 facilitating subjects. |

# Annex B: English and maths progress measure methodology (measure suspended until 2024 to 2025 performance measures)

> **Measure suspended until 2024 to 2025 performance measures**
>
> This section explains how we have calculated the English and maths progress measures in previous years. We are not producing these measures for the 2023 to 2024 performance measures cohort and this information is here for information only. See the main section on the English and maths progress measure for more information.

## English and maths progress overview

### How the measure works

The English and maths progress measure is made up of two distinct measures, one for maths and the other for English, and an individual student can be in scope for one, both or neither measure depending on their achievement in English and maths by the end of KS4.

Students in overall scope for each measure have their progress assessed by comparing their best grades by the end of KS4 to those achieved by the end of post-16 study[19].

By aggregating student progress scores to give overall English and maths progress scores for each school and college, the effectiveness of the school or college can be measured and they can be held accountable.

### Data sources

The primary source of information underpinning the English and maths progress measure is current and historical exam data sourced from Awarding Organisations. This data is used to determine students' prior attainment (and so whether in scope of the measure), and the progress students make in the 16 to 18 phase.

In addition, funding data collected by the Education and Skills Funding Agency (ESFA) is used to determine whether any student is exempt from the requirement to study English

---

[19] Note, because only a student's best performance is considered, both during KS4 and in the 16 to 18 phase, formal discounting as implemented in attainment measures is not required here.

and/or maths post-16 irrespective of their prior attainment. The English and maths accountability measure broadly aligns with the ESFA condition of funding rules which require students without prior attainment of GCSE A*-C or grades 9-4 in English and/or maths to be studying these subjects as part of their study programme in each academic year.

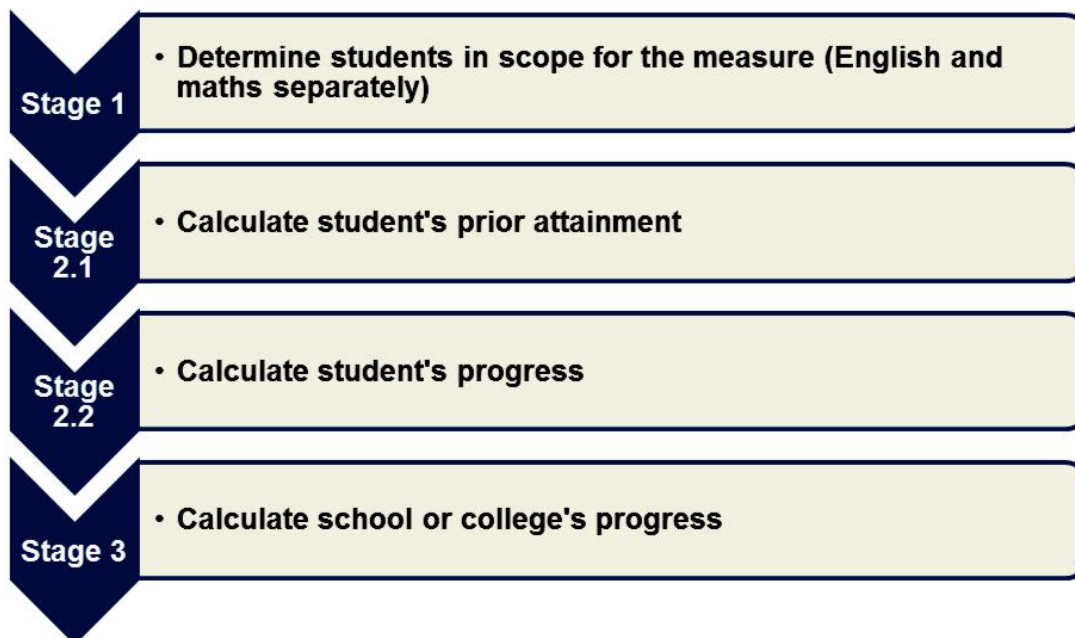

## Calculating the English and maths progress measures

The following sections give more detail on what is involved when determining which students are in scope of the progress measure, and for those in scope, calculating both their level of prior attainment and progress made in the institution post-16.

### Students included in the measures, exclusions and exemptions

Students are potentially in scope for either the English or maths progress measures if they did not achieve a GCSE grade A*-C or 9-4 or equivalent by the end of KS4 in that subject.

Students that have a level 2 functional skill and do not have a GCSE grade 3 by the end of KS4 are out of scope of the measure. This was introduced in 2020 with the change in the condition of funding which allowed a student to meet the condition of funding with a level 2 functional skill during their 16 to 18 phase.

Students for whom no recorded prior achievement exists in exam records are excluded from the measure.

Exam results have been combined with ESFA funding data to identify students that schools and colleges have confirmed as exempt from the requirement to study English and maths in the 16 to 18 phase, in particular:

- students with learning difficulties and/or disabilities, who are assessed as not able to study either GCSE or stepping stone qualifications;
- students with overseas qualifications that are established as equivalent to GCSE grade C or grade 4.

In addition, there are students for whom condition of funding rules do not apply. This includes students on study programmes under 150 hours, and students not on a study programme generally, for example those on an apprenticeship programme. From 2017 performance measures – where ESFA funding data confirms the condition of funding does not apply – these students will also be exempted.

Where an apprenticeship student has been recorded on the ILR or school census and have been included in the English and maths progress measure, Schools and colleges can submit a request to remove these students from the English and maths measure.

A student is considered enrolled on an apprenticeship programme in the reporting years if:
- They have a continuing or completed apprenticeship recorded in the ILR for two academic years; OR
- They have no ESFA core learning aim recorded in the ILR alongside their apprenticeship programme in the same academic year; OR
- They are recorded in the ILR on an apprenticeship programme at the same provider as their ESFA learning aims.

## Qualifications included in the measures: students in scope

ESFA guidance[20] sets out the full list of qualification types equivalent to GCSE grade 9-4 for the purpose of prior attainment. Principally these are qualifications in maths, English language and English literature from Ofqual approved GCSEs graded A*-C (and 9-4 for new reformed GCSEs), level 1/level 2 certificates grade A*-C, and some level 3 qualifications such as A/AS levels, International Baccalaureate including maths components, and Core Maths.

The guidance is used to inform a list of specific qualifications that the student's exam record is checked against to determine whether the student is in scope for the English and maths progress measures. The check is made against all examination results achieved by the student up to and including key stage 4.

English literature GCSE counts for prior attainment; a student with either an English language or literature GCSE at A*-C or 9-4 by the end of key stage 4 is out of scope of

---

[20] ESFA guidance is published here.

the English progress measure. However, English literature GCSE does not count for progress**.**

## Qualifications included in the measures: starting point

When assessing a student's starting point for the calculation a similar process occurs as when assessing whether a student is in scope for the measure. However, the list of qualifications used to establish their level of prior attainment is wider, in particular including Basic Skills, Key Skills and Functional Skills. This is to recognise that whilst students may end key stage 4 with no GCSE passes in English and/or maths, achievement in other qualifications provide evidence of their level of ability when starting post-16 study.

## Qualifications included in the measures: progress

During post-16 study, students for whom the condition of funding applies must be enrolled on an approved qualification. The list of qualifications approved for teaching under the condition of funding is maintained on the Learning Aims Reference Service (LARS).

This list of qualifications approved for teaching is used to determine which individual qualifications 'count' for progress in the measure. Any post-16 attainment in an English or maths qualification that is not approved for teaching as set out on LARS is not captured in the progress measure.

Qualifications are approved for a set period of time and are organised in LARS based on whether the qualification is approved in a given academic year. As such, the student's exam record for a given academic year is compared to the list of approved qualifications for that academic year, and the student's best result (in terms of performance points) is recorded and used when calculating progress.

Detailed condition of funding rules set out the expectation that students with a prior attainment grade D or grade 3 study GCSEs rather than stepping-stone qualifications, and the treatment of unregulated level 1/ level 2 qualifications.

## Calculating progress

In the most straightforward cases, the calculation of progress simply subtracts their performance post-16 from their prior attainment at KS4. For example:

- If an individual student moves from a grade 2 to a grade 4 they would receive a progress score of +2 as they have made two grades progress;
- If the student starts at grade 2 but achieves a grade 1 during post-16 they would receive a progress score of -1.

We do not wish institutions to be disproportionately penalised where a student is unable to enter for an English or maths exam or where factors outside of an institution's control

lead to a bad result. This is achieved by applying a cap to the measure so that -1 grade is the maximum negative progress score applied to an individual student. Students not entered for any exams automatically score -1. For example:

- A student who enters with a grade 3 but achieves a grade 1 when they retake has their progress capped to -1 grade (rather than -2);
- A student who enters with a grade 3 but does not sit the exam has their progress capped to -1 grade (rather than -3).

Applying this cap means that schools and colleges that take on students with poor motivation are treated fairly. This is important as the measure includes all students who do not have a C/4 grade or above in English and/or maths, in line with the condition of funding, regardless of whether or not they enter for an examination.

**Students attending multiple institutions post-16**

The highest English and maths grade a student has achieved when they enter an institution is the baseline for the calculation. This may be the grade a student achieved at key stage 4 or a grade achieved with a different institution at an earlier stage of 16 to 18 study. This ensures the measure only counts the progress an institution makes with a student to improve their English and/or maths.

A consequence is that an individual student might be in scope for the measure at the end of key stage 4 for their first institution attended – and progress in that institution will be included in performance measures – but if the student achieves the 9-4 (or A*-C) standard or level 2 functional skills (where they do not also have a GCSE grade 3) in the first institution then the student is out-of-scope of the measure at their second institution.

When a student attends multiple institutions post-16, requiring both their scope and starting point to be re-assessed, the only new exams taken into account after key stage 4 are those approved for teaching post-16 under the condition of funding, i.e. the qualifications listed on LARS online that 'count' for progress.

### Points awarded for stepping stone qualifications

Stepping stone qualifications such as functional skills and free standing maths are taken into account when calculating the progress made by students. This is done by using a capped version of the "challenge points"[21] from the performance points system, as illustrated in the table below which shows the points that will be used from 2020. As part of a review for summer 2019, the points applied to all qualifications used in the

---

[21] Challenge points are points awarded for grades awarded in qualifications regardless of their size. More detail can be found in the guide to performance points.

calculation of English and maths progress will change from 2020. This follows wider consultation with stakeholders.

The changes included:
- Increasing the relative progress points for attaining Functional Skills Level 1 and Level 2 qualifications so schools and colleges can further support students to take the level 2 qualification which is most appropriate for them.
- Reflecting the new GCSE grading system and making the points consistent by moving from the old 8-point scale to the new 9-point scale, with each grade worth one point.
- Recognising progress made between each entry level. From 2020 tables, Entry Level 1 will receive 0.25, Entry Level 2 0.5 and Entry Level 3 0.75 points.

A comprehensive list of points to be used in performance measures can be found here https://www.gov.uk/government/publications/16-to-18-english-and-maths-progress-measure-qualifications, this will be updated when the progress measure resumes. A summary table of the points can be seen below:

## Points from 2020

### Table B1: English and maths measure points from 2020

| Points awarded | 9-1 GCSEs | Legacy GCSEs | Functional Skills | Free Standing maths | ESOL | AQA use of maths |
|---|---|---|---|---|---|---|
| 9 | 9 | | | | | |
| 8.5 | | A* | | | | |
| 8 | 8 | | | | | |
| 7 | 7 | A | | | | |
| 6 | 6 | | | | | |
| 5.5 | | B | | | | |
| 5 | 5 | | | | | |
| 4 | 4 | C | | | | |
| 3.5 | | | L2 | | | |
| 3 | 3 | D | | L2 (all grades) | L2 (all grades) | A*/A/B/C |
| 2 | 2 | E | L1 | | | |
| 1.75 | | | | L1 (A-C) | L1 (D/M) | D/E |
| 1.5 | | F | | | | F |
| 1.25 | | | | L1 (D) | L1 (pass) | |
| 1 | 1 | G | | | | G |
| 0.8 | | | | L1 (E) | | |
| 0.75 | | | EL 3 | | EL 3 | |
| 0.5 | | | EL 2 | | EL 2 | |
| 0.25 | | | EL 1 | | EL 1 | |

Whilst stepping stone qualifications are typically smaller than GCSEs, capped points do not factor in size, as all approved qualifications have sufficient breadth to meet the existing requirements of funding.

The measure only looks at the highest value outcome a student has attained in the institution attended. A student achieving a level 1 functional skill and a GCSE D/3 grade will be assigned 3 points in the calculation – the value of the GCSE D/3 grade.

Detailed worked examples, including what happens when students attend multiple institutions, are shown below

> **Students in scope for the measures, but studying level 3 qualifications**
>
> In addition, a student may meet the condition of funding through approved level 3 qualifications (Core maths at level 3, A or AS levels, the International Baccalaureate, OCR Maths for Engineering level 3 certificate and OCR Cambridge Pre-U maths). The points awarded for approved level 3 qualifications are capped at 9 pts from 2020 (8 pts in 2017, 2018 and 2019 tables).

## Calculating school or college progress

Once the student progress scores have been calculated, the average of all the student progress scores is then calculated within the school or college. The table below shows an example for a school or college with 5 student progress scores:

**Table B2: Worked example of calculating school or college English and maths progress**

| Student / School or College | Score |
|---|---|
| Student 1 English progress | +1.0 |
| Student 2 English progress | +1.0 |
| Student 3 English progress | +0.4 |
| Student 4 English progress | -1.0 |
| Student 5 English progress | -1.0 |
| School or college progress score for English | $\dfrac{+1.0\ +1.0\ +0.4\ -1.0\ -1.0}{5}$ $= +0.08$ grades |

From 2018, the headline English and maths progress performance measures (average progress) will be supplemented by contextual data showing the proportion of students in scope for either the English and/or maths measures that entered an approved qualification. This will highlight the percentage of students in an institution that study English and maths and take examinations in these subjects.

# Worked examples: English and maths progress

## Individual student progress in the same institution throughout

As the table below illustrates, the progress calculation uses the student's best result whilst at a particular institution.

**Table B3: Calculating individual student progress in the English and maths progress measure, where the student has been in the same institution throughout**

| Scenario | Prior Attainment | Attainment whilst at institution: Year 1 | Attainment whilst at institution: Year 2 | Attainment whilst at institution: Year 3 | Student progress |
|---|---|---|---|---|---|
| Student A | GCSE grade 3 3 pts | GCSE grade 2 2 pts | GCSE grade 4 4 pts | N/A | 4 - 3 = 1 |
| Student B | GCSE grade 2 2 pts | GCSE grade 3 3 pts | GCSE grade 2 2 pts | N/A | 3 - 2 = 1 |
| Student C | GCSE grade 1 1 pts | ESOL Entry L2 0.5 pts | ESOL L1 Merit 1.75 pts | ESOL L2 Pass 3 pts | 3 – 1 = 2 |
| Student D | IGCSE grade 2 2 pts | FSM L1 Grade E 0.8 pts | No entries | FSM L1 grade E 0.8 pts | 0.8 – 2 = -1 (capped) |
| Student E | GCSE grade 1 1 pt | No entries | No entries | No entries | -1 (no entries) |
| Student F | GCSE grade 5 5 pts | Not in scope | Not in scope | Not in scope | N/A |

- For Student A the GCSE grade 4 (4 points) achieved in Year 2 (after KS4) discounts the grade 2 (2 points) achieved in Year 1.
- As long as the student is aged 16 to 18, it does not matter in which year the best results was achieved, so in the case of Student B and Student D the progress calculation uses their best achievements in Year 1, Year 2 and Year 3 respectively
- Student D gives an example of capping progress, where uncapped the student's progress would be -1.2, but is capped at -1
- Student E who had no entries in the 16 to 18 phase automatically scored -1

## Individual student progress in multiple institutions

Calculating student progress when they attend multiple institutions in the 16 to 18 phase is slightly more complicated as the student's overall progress may be split across more than one institution, and each institution is only credited for progress made in that institution.

The table below considers another scenario (Student G), and retaining the exam profile throughout, imagines instead that the student attended 1, 2 or 3 different institutions in the 16 to 18 phase.

**Table B4: Calculating individual student progress in the English and maths progress measure, where the student has moved institutions during 16 to 18 study**

| Scenario | Prior attainment | Attainment in 16 to 18 phase: Year 1 | Attainment in 16 to 18 phase: Year 2 | Attainment in 16 to 18 phase: Year 3 | Progress in Institution A | Progress in Institution B | Progress in Institution C |
|---|---|---|---|---|---|---|---|
| Student G: 1 | 1 pt | Institution A: 2 pts | Insitution A: 3 pts | Insitution A: 2 pts | 3-1 =2 | N/A | N/A |
| Student G: 2 | 1 pt | Institution A: 2 pts | Institution B: 3 pts | Insitution B: 2 pts | 2-1 =1 | 3-2 =1 | N/A |
| Student G: 3 | 1 pt | Institution A: 2 pts | Insitution A: 3 pts | Insitution B: 2 pts | 3-1 =2 | 2-3 = -1 | N/A |
| Student G: 4 | 1 pt | Institution A: 2 pts | Institution B: 3 pts | Insitution A: 2 pts | Better of: 2-1 =1 or 2-3 = -1 | 3-2 =1 | N/A |
| Student G: 5 | 1 pt | Institution A: 2 pts | Institution B: 3 pts | Institution C: 2 pts | 2-1 =1 | 3-2 =1 | 2-3 =-1 |

- Scenario 1 works in the same way as the examples A-F, so 3 points is the best result in the 16 to 18 phase and the key stage 4 prior attainment of 1 points is subtracted.
- Scenario 2 has the student move institutions after Year 1. Progress in the first institution uses Year 1 attainment (2 points) from which the key stage 4 prior attainment of 1 is subtracted; however the best achievement in the second institution (3 points) takes into account the progress made in the first institution, and so the prior attainment subtracted is now 2 points
- Scenario 4 is the most complex situation that is encountered and occurs when a student attends the same institution in Year 1 and Year 3, but another in Year 2
- The student makes progress in Year 1 (1 pt). However, in Year 3 the student goes backwards compared to their Year 2 in a different institution (-1 point). In this situation, where progress is both positive and negative, we report the positive progress in performance measures for Institution 1.
- If the student had made positive progress in both Year 1 and Year 3 in Institution 1 then both sets of progress would be added together and reported against Institution 1.

## Multiple institutions and moving out-of-scope of tables

If a student attends multiple institutions, it becomes possible that they move out-of-scope. The table below illustrates this in the case of student H who achieves 4 points in year 2 (equivalent to GCSE grade 4) and so is out-of-scope of the progress measure by the time they attend institution 2.

**Table B5: Calculating individual student progress in the English and maths progress measure, where the student has moved institutions during 16 to 18 study, and moves out of scope while in one institution**

| Scenario | Prior attainment | Attainment in 16 to 18 phase: Year 1 | Attainment in 16 to 18 phase: Year 2 | Attainment in 16 to 18 phase: Year 3 | Progress in Institution A | Progress in Institution B | Progress in Institution C |
|---|---|---|---|---|---|---|---|
| Student H | 1 pt | Institution A: 2 pts | Insitution A: 4 pts | Insitution B: out of scope | 4-1 =3 | N/A | N/A |

## Condition of funding details: points to note

### Students with a GCSE grade D/3

The condition of funding states that a student with a grade D/3 at GCSE at key stage 4 should study for GCSE qualifications in the post-16 phase rather than stepping stone qualifications from 2015 to 2016. This requirement also means that a student cannot be taken out of scope of the progress measure by achieving a functional skill level 2 if they already have a GCSE grade 3.

### Unregulated level 1/ level2 certificates in the English and maths measure

Unregulated level 1/level 2 certificates are included in the list of qualifications through which a student's prior attainment is determined. They are treated as equivalent to a GCSE in that students holding an unregulated level 1/level 2 certificate at grades 9-4 by age 16 in maths and either English language or literature (9-4 passes in *both* language and literature are not needed) are not required to study maths and/or English in the 16 to18 phase, and are excluded from this measure.

Where a student's highest prior attainment is an unregulated level 1/level 2 certificate at grade 3 or below, they will have to study English and/or maths, and for the purposes of determining the baseline for this measure their unregulated level 1/level 2 certificate grade equates to the same GCSE grade.

However, unregulated level 1/level 2 certificates are not approved for teaching post-16 as an equivalent to GCSEs under the condition of funding and will not contribute to a student's calculated progress in the English and maths measure.
