BIKE THEFT INDEX 2005

WANTED

YOUR BIKE!

Please leave unlocked

THE FACTS

Numbers of motorcycles stolen and risk of theft:

- In 2003, 50,591 motorcycles were stolen in England, Scotland and Wales.
- Between 2001 and 2003 the rate of theft of motorcycles reduced from 39 per 1,000 registered to 37 per 1,000 registered.

Certain ages and types of motorcycles are more likely to be stolen:

- Lower powered motorcycles (less than 125cc, including mopeds and scooters) are at much greater risk of theft than larger bikes.
- Lower powered motorcycles less than 5 years old are at most risk of theft. They suffer a theft rate of 85 per 1,000 registered, and constitute 60 per cent of all thefts, while making up only 26 per cent of all bikes registered.

In comparison to cars:

- Theft rates for motorcycles are much higher than those for cars. In 2003 the theft rate for motorcycles was 37 per 1,000 registered on the road, compared to 10 per 1,000 registered on the road for cars.

THE 2005 BIKE THEFT INDEX

The Bike Theft Index shows which makes and groups (based on engine capacity - cc) of bikes are most at risk of being stolen in England, Scotland and Wales. It is based on theft data taken from the Police National Computer (PNC) in 2003 and on information provided by the Driver and Vehicle Licensing Agency (DVLA) on the number of bikes on the road.

Not all makes and groups of bike are included in the index. Only those with sufficient numbers on the road to provide statistically reliable results are shown.

It should be noted that for many bikes the total parc (number registered) is far less than 100. These categories tend to be vintage one-off or customised bikes, and their inclusion in this index would give a misleading picture about the risk of theft for less specialised bikes.

HOW TO USE THE BIKE THEFT INDEX

Each make of bike is split into a group based on engine capacity or style as registered with the DVLA. The left-hand side of each table lists the makes of bike alphabetically. The right-hand side shows 3-year age bands for when the bike was **first registered**. To assess whether a particular moped, scooter or motorbike has a high, medium or low risk of theft read along the line to the right until you find the column showing the 3-year band in which the bike was first registered. The coloured block at this point indicates the theft risk.

For bikes in this index, the risk of theft is colour-coded as follows:

White blocks are used where a make/group of bike was not produced in the years shown. Grey blocks are used where there are too few bikes of that type on the road for an accurate risk assessment to be made.

INSURANCE GROUPS

The risk of theft in this index will not necessarily match the insurance rating for a particular bike as the insurance rating also takes a bike's accident repair costs into account. Individual insurance premiums also depend upon other factors such as a rider's history and the area they live in.

WHAT TO DO NEXT

Bikes are an easy target for thieves if they are not secured as they can be wheeled away or bundled into a van. The snapshot of bike theft given in this index shows that mopeds, scooters and other smaller-engined bikes are most at risk of theft. This is seen as a reflection of the growing popularity of mopeds and scooters as commuter bikes. More generally, newer bikes are consistently most at risk.

However, with the continued support of manufacturers including security features such as immobilisers or parts marking as standard, and increased awareness and use of security devices by riders, this problem can be tackled more effectively.

The more security measures you can take, the less attractive your bike will be to thieves. No single product can cover all possibilities, but if you invest in both mechanical and electronic security devices, you will greatly reduce your risk of becoming a victim of this particularly disruptive type of theft.

Highest risk

more than 68 bikes
in every 1000 on
the road stolen

Medium risk

between 10 and 68 bikes
in every 1000 on the
road stolen

Lower risk

less than 10 bikes
in every 1000 on
the road stolen

WHAT ELSE CAN BE DONE

Electronic security

Owners of more vulnerable bikes can help reduce the risk of theft by using properly installed Thatcham compliant or Sold Secure approved security devices. Some security devices may get you a discount on your insurance (up to 10% for immobilisers).

Mechanical security

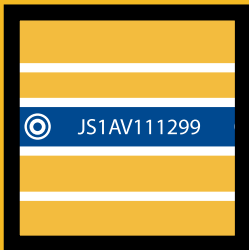

Whatever type of mechanical security you opt for remember:

- Although it is difficult to carry around, it does act as a good deterrent to casual thieves;
- Always try to secure your bike to something solid and immovable, such as a ground anchor. Keep locks and chains off the ground - this makes them harder to break. **A common method of bike theft is simply to lift the vehicle into the back of a van;**
- Don't rely on this form of security alone.

Parking

Park in safe, well lit areas. Try to look for a public car park that is part of the police approved 'Safer Parking Scheme'. For further information and location of your nearest accredited safer car park go to www.saferparking.com Use a bike cover whenever your bike isn't garaged.

Parts marking and identification systems

Put security marking on as many parts of your bike as you can. This will make it less attractive to opportunist thieves and will increase your chance of getting your bike back if it is stolen and then recovered.

CONTACTS FOR FURTHER ADVICE

Thatcham

(The Motor Insurance Repair Research Centre) - for information on immobilisers and other vehicle security devices.
