In 2012, nearly 24,000 passengers at Heathrow, Gatwick, Stansted, Luton and Manchester airports were asked about their experience of security screening. The survey questions covered:

- satisfaction with security screening
- the least satisfactory aspect
- estimated queuing time
- acceptability of any inconvenience caused.

These questions were sponsored by the Department for Transport and were included in the Civil Aviation Authority (CAA) passenger survey. The results are summarised here, together with results from similar surveys in 2008 to 2011. Detailed results for earlier years are available on the Department’s website.

**Key findings include:**

- Over 90% of air passengers surveyed in 2012 said they were very or fairly satisfied with their experiences at security screening and 3% were very or fairly dissatisfied.

- The aspects of security screening with which passengers were least satisfied were:
  - queuing (cited by 6%)
  - slow speed of processing (5%).
  - removal of shoes (4%)
  - restriction of liquids (4%)

The majority of passengers (72%) said there was no aspect with which they were least satisfied.

- The average time passengers said they spent queuing for security screening ranged from 5.3 minutes at Gatwick to 8.4 minutes at Stansted.

- The majority of passengers (91%) agreed that any inconvenience caused by the security screening was acceptable.

The set of questions asked in 2011 is given in Annex A. As responses may be influenced by the passenger profile at each airport, an overview of passenger characteristics at the five airports surveyed in 2011 is given in Annex B. A detailed set of results for each question, including breakdowns by passenger and flight characteristics, is presented in Annex C.
How satisfied are you with your experience of the security screening used at the airport today?

- A large majority (93%) of passengers surveyed in 2012 said they were very or fairly satisfied with their experience at security screening and over two thirds (68%) were very satisfied. At each of the five airports surveyed, at least 90% of respondents said they were very or fairly satisfied.

- Satisfaction at Heathrow has increased from 86% in 2008 to 94% in 2012, with the proportion saying they are very satisfied increasing from 52% to 68%. Improvement has been similar at Gatwick, with overall satisfaction increasing from 87% in 2009 to 94% in 2012, and the proportion who were very satisfied from 56% to 71%. Improvement at Stansted and Luton has been less pronounced. At Manchester levels of satisfaction peaked in 2010 but have fallen slightly in the last 2 years.

- Satisfaction was slightly higher among leisure than business passengers and among long-haul passengers compared to short haul and domestic.

Satisfaction with security screening: Heathrow, Stansted and Manchester, 2008-2012

Satisfaction with security screening: other airports surveyed in 2008-2012
What aspect of the security screening were you least satisfied with?

- The majority (72%) of respondents said there was no aspect of security screening with which they were least satisfied. This was the case for 79% of respondents at Manchester and between 70% and 73% at the other four airports surveyed.

- Overall the aspects of security screening with which passengers were least satisfied was queuing (cited by 6%) and slow speed of security processing (5%). Queuing was cited by 9% of respondents at Gatwick, 7% at Stansted and Luton, 6% at Manchester and 5% at Heathrow.

- Removal of shoes and restriction of liquids were both cited by 4% of all passengers surveyed, ranging from 2% at Manchester to 6% at Gatwick in both cases.

- The proportion of passengers saying there was no aspect with which they were least satisfied increased from 68% in 2011 to 72% in 2012. The increase was particularly marked at Stansted (62% to 71%). Conversely the proportion of respondents identifying particular problems decreased.

Unweighted sample size

- negligible (less than 0.5%)

6,695  5,074  5,032  1,460  5,529
Least satisfactory aspects of security screening, 2012

- The proportion of respondents citing queuing was slightly higher among passengers on domestic flights (9%) than on short haul (7%) or long-haul (5%) and was relatively high at Gatwick North (10%), where queue times were longer, on average, than at Gatwick South, which opened a new security area at the end of 2011.
For how long, in minutes, did you queue when waiting to be security screened?

- The average queue time in 2012, based on passengers’ estimates of how long they queued, ranged from 5.3 minutes at Gatwick to 8.4 minutes at Stansted. Average perceived queue time fell slightly at Gatwick in 2012 compared to 2011 but increased slightly at Heathrow, Stansted and Luton. Manchester experienced a marked increase, from 5.1 minutes in 2011 to 7.0 minutes in 2012.

</table>

- 72% of passengers at Gatwick said they queued for 5 minutes or less compared to around two-thirds (65-68%) at Heathrow, Luton and Manchester and around half (52%) at Stansted.

- Conversely, the proportion who said they queued for over 10 minutes was lowest at Gatwick (8%) and Heathrow (10%) and highest at Stansted (22%).

- It is worth noting that passengers tend to overestimate their queuing time so these figures are likely to be higher than actual queuing times at these airports. They should nonetheless give some indication of relative queuing times between airports and the extent to which these have changed at the three airports surveyed each year.

- Estimates of actual queuing times are available for the three regulated airports (Heathrow, Gatwick and Stansted) as part of the Service Quality Rebate (SQR) scheme. Both sources suggest that...
average queuing times have improved slightly at Gatwick between 2011 and 2012 and worsened at Heathrow, particularly in the latter part of the year. At Stansted, both sources show a marked increase in queue times between 2009 and 2010 followed by smaller annual fluctuations. At Manchester, the increase in queue time may be explained at least in part by the replacement of their cohort of body scanner machines with a smaller cohort following the end of an EU approved trial.

Perceived security screening queuing time (banded) based on passenger estimates: Heathrow, Stansted and Manchester, 2008-2012

Perceived security screening queuing time (banded) based on passenger estimates at other airports surveyed in 2008-2012
How strongly do you agree with the following statement: “Any inconvenience caused by the security screening was acceptable”?

- Overall, a large majority (91%) of passengers agreed or strongly agreed that any inconvenience caused by security screening was acceptable, ranging from 87% at Luton to 93% at Gatwick. Among all passengers surveyed, 3% disagreed with this statement.

- The proportion agreeing or strongly agreeing with this statement was slightly higher among passengers travelling for leisure than on business (92% and 88% respectively) and among those travelling long-haul than domestic (92% compared to 89%).

- There has been a slight increase in the proportion of passengers agreeing with this statement since this question was first asked at Heathrow (2008) and Gatwick (2009) but not at the other 3 airports surveyed in 2012.

* There is a discontinuity in the series between 2008/2009 and 2010. Prior to 2010 the interviewers did not ask all respondents this question, particularly at Stansted and Manchester. This is likely to explain the step change in the proportions who ‘agree’ and ‘strongly agree’ at these airports in 2010.

ANNEX A

CAA survey module on security screening for 2012

I would now like to ask you a few questions about your experience of the security screening used when you entered the departure lounge. That is the bag x-ray machine, the metal detector, and the body and bag searches.

1. How satisfied are you with your experience of the security screening used at the airport today? [SHOWCARD 1]

2. What aspect of the security screening were you least satisfied with? (Ask all passengers) [PROMPT CARD 1]

3. For how long, in minutes, did you queue when waiting to be security screened? [If say did not queue then put 0 minutes]

4. And how strongly do you agree or disagree with the following statement

“Any inconvenience caused by the security screening was acceptable”

[SHOWCARD 2]

End of questionnaire
ANNEX B

Characteristics of passengers at the surveyed airports

- In 2012, the five airports surveyed were the five largest UK airports in terms of the number of terminal passengers. They accounted for over 150 million terminal passengers, over two thirds (68%) of the 221 million passengers at all UK airports.

- Heathrow was the largest airport, accounting for nearly a third (32%) of all terminal passengers, followed by Gatwick (16%). Manchester and Stansted accounted for a similar proportion (8-9%) while Luton accounted for roughly half this amount (4%).

Total terminal passengers, 2012

- The five airports surveyed differ not only in terms of size but also in terms of the type of passengers that use them (see Figures B2-4 and Table C1). For example:

  - In 2012, Heathrow had a much higher proportion of long-haul passengers than the other airports at 53%. Heathrow also had the highest proportion of passengers who were foreign residents (59%) and travelling on business (30%).

  - Gatwick had some long-haul flights, accounting for 15% of their passengers, and a higher proportion of passengers on charter flights than the other London airports (14%).

  - Manchester had the highest proportion of passengers on charter flights (23%) and, after Heathrow, this airport had the highest proportion of long-haul passengers in the sample (24%).

  - Stansted had a high proportion of passengers on short-haul flights (93%) and a relatively high proportion of foreign residents (43%). The age profile of passengers using Stansted is relatively young, with nearly half (47%) of adult passengers aged between 16 and 34 years.

  - Luton had a relatively high proportion of passengers on short-haul flights (87%). It mainly handled UK residents (70%), passengers travelling for leisure (84%) and passengers on scheduled flights (96%).
Terminal passengers by airport and purpose, 2012

- Heathrow: 70% Leisure, 30% Business
- Gatwick: 85% Leisure, 15% Business
- Stansted: 85% Leisure, 15% Business
- Luton: 84% Leisure, 16% Business
- Manchester: 81% Leisure, 19% Business

Terminal passengers by airport and destination, 2012

- Heathrow: 53% Long Haul, 40% Short Haul, 7% Domestic
- Gatwick: 15% Long Haul, 73% Short Haul, 11% Domestic
- Stansted: 7% Long Haul, 93% Short Haul, 2% Domestic
- Luton: 11% Long Haul, 87% Short Haul, 2% Domestic
- Manchester: 8% Long Haul, 68% Short Haul, 3% Domestic

Terminal passengers by airport and country of residence, 2012

- Heathrow: 59% Foreign, 41% UK
- Gatwick: 28% Foreign, 72% UK
- Stansted: 43% Foreign, 57% UK
- Luton: 30% Foreign, 70% UK
- Manchester: 19% Foreign, 81% UK

Source: CAA Passenger Survey 2012
Background notes

Survey details
1. The Civil Aviation Authority (CAA) Passenger Survey is undertaken to obtain information about air travellers that cannot be collected on a routine basis from the air transport industry. The survey includes questions on journey purpose, final and intermediate origins/destinations, means of transport to and from airports, route flown, country of residence and income.

2. The CAA uses its own interviewers to conduct the survey and it runs continuously throughout the year at selected UK airports. Only departing passengers are interviewed. Additional information about the survey can be found at: www.caa.co.uk/surveys

3. In 2011, a set of four questions (see Annex A) relating to security screening was sponsored by the Department for Transport (DfT) in order to monitor passengers’ experiences at UK airports. These questions were asked of a sub-sample of the passengers responding to the main CAA survey at Heathrow, Gatwick, Stansted, Luton and Manchester. The same set of questions was asked at Heathrow, Stansted, Manchester and Leeds Bradford in 2010. In 2008 and 2009 a longer set of questions on passenger experience was asked at a selection of airports including Heathrow, Stansted and Manchester; this included 3 of the 4 questions asked in 2011 and 2012.

4. The questions relate to the security screening used when the passenger enters the departure lounge. This covers the bag x-ray machine, the metal detector, and the body and bag searches.

5. In 2008 passengers using Heathrow Terminal 4 were not asked the questions on security screening as interviews were conducted prior to screening. In 2010 to 2012 Heathrow Terminal 2 was not in operation.

Analysis
1. The responses have been weighted to reflect the actual distribution of passengers by airport terminal and flight destination (domestic, short-haul and long-haul).

2. Passengers who did not answer a particular question (either because they refused or said they didn’t know) have been excluded from the analysis of that question.

3. Where sample sizes are sufficient, differences by flight and passenger characteristics have been examined. Similarly, where sample sizes permit, changes over time are identified for the airports surveyed in multiple years. However, due to the different subset of airports included 2008 to 2010, it is not possible to compare the overall results for these survey years with 2011 and 2012.

4. Differences between airports, in terms of passenger profile, should be taken into account when interpreting the results and making comparisons between airports. A summary of key characteristics for each survey airport in 2012 is given in Annex B.

5. Passengers’ experiences of security screening may be affected by changes to screening procedures, such as the introduction of security scanners at Heathrow, Manchester, Gatwick and Stansted on a risk-assessed rollout which began in 2010.

Quality
6. These official statistics are not designated National Statistics. However, they are produced to high professional standards set out in the Code of Practice for Official Statistics. They undergo regular quality assurance reviews and are produced free from any political interference.

7. Details of ministers and officials who receive pre-release access to these statistics up to 24 hours before release can be found in the Pre-release access list.
