Public health functions to be exercised by the NHS Commissioning Board

Service specification No. 7

Hib/Men C immunisation programme

November 2012
Public health functions to be exercised by the NHS Commissioning Board, Service specification No.7, Hib/Men C immunisation programme.

This specification is part of an agreement made under section 7A of the National Health Service Act 2006. It sets out requirements for and evidence underpinning a service to be commissioned by the NHS Commissioning Board for the financial year 2013-14. It may be updated in accordance with the agreement.

Service specification No.7

This is a service specification within Part C of the agreement ‘Public health functions to be exercised by the NHS Commissioning Board’ dated November 2012 (the ‘2013-14 agreement’).

The 2013-14 agreement is made between the Secretary of State for Health and the National Health Service Commissioning Board (NHS CB) under section 7A of the National Health Service Act 2006 (the 2006 Act) as amended by the Health and Social Care Act 2012.

This service specification is to be applied by the NHS CB in accordance with the 2013-14 agreement. An update to this service specification may take effect on an agreed date as a variation made in accordance with the 2013-14 agreement.

This service specification is not intended to replicate, duplicate or supersede any other legislative provisions that may apply.

The 2013-14 agreement including all service specifications within Part C is available at www.dh.gov.uk/publications
1. Purpose of Hib/MenC immunisation programme

1.1 This document relates to the Hib/MenC booster vaccine that protects children against Hib and meningococcal C infections. This vaccine is part of the national childhood immunisation programme which aims to prevent children from catching vaccine preventable diseases that are associated with significant mortality and morbidity. The purpose of the service specification is to enable the NHS Commissioning Board (‘NHS CB’) to commission Hib/MenC immunisation services of sufficient quantity and quality to prevent the infections and outbreaks caused by these organisms. This means achieving high levels of coverage across England as well as within upper tier local government areas and within the context of populations with protected characteristics as defined by the Equality Act 2010.

1.2 This specification forms two distinct parts. Part one (sections 1 and 2) provides a brief overview of the vaccines including the disease they protect against, the context, evidence base, and wider health outcomes.

Part 2 (sections 3, 4 and 5) sets out the arrangements for:

- front-line delivery
- the expected service and quality indicators, and
- the standards associated with the programme,

These underpin national and local commissioning practices and service delivery.

1.3 The existing, successful programme provides a firm platform on which designated areas can develop and innovate to better meet the needs of their local population and work towards improving outcomes. This specification will also promote a consistent and equitable approach to the provision of the commissioning and delivery of the Hib/MenC vaccines across England. However, it is important to note that this programme can change and evolve in the light of emerging best practice and scientific evidence. NHS CB and providers will be required to reflect these changes accordingly in a timely way as directed by the national schedule.
1.4 Immunisation against infectious disease (known as 'The Green Book'), a UK document, as issued by Public Health England provides guidance and the main evidence base for all immunisation programmes. This service specification must be read in conjunction with the electronic version of the Green Book, CMO letters, Director of Immunisation letters and any guidance issued by DH and PHE, and reflected in the commissioning of immunisation programmes. This specification must also be read in conjunction with additional evidence, guidance and literature issued by the Joint Committee on Vaccination and Immunisation (JCVI).

www.dh.gov.uk/greenbook

www.dh.gov.uk/ab/JCVI

1.5 This service specification is not designed to replicate, duplicate or supersede any relevant legislative provisions that may apply e.g. the Health and Social Care Act 2012. The specification will be reviewed and amended in line with any new recommendations or guidance, and in line with reviews of the Section 7A agreement.
2. Population needs

Background

2.1 Immunisation is one of the most successful and cost effective public health interventions and a cornerstone of public health. Maintaining high vaccine coverage is essential to prevent the spread of infectious disease, complications and deaths among individuals and protecting the population’s health.

2.2 The Hib/MenC booster is routinely given as part of the wider childhood immunisation schedule and it provides comprehensive protection against:

- *Haemophilus influenza* type b (Hib)
- MenC

2.3 The vaccine boosts the protection a child gets from the first course of Hib vaccine when they are two, three and four months old, and the MenC vaccine when they are three and four months of old. The booster is designed to extend the protection offered in infancy during the period of highest risk of these infections (up to five years of age). The Hib/MenC booster in the second year of life was introduced into the routine childhood immunisation programme in 2006, because studies had shown that protection after the infant course declined quite quickly. The vaccine, has a strong evidence base and is highly effective in protecting against these serious diseases, which can still be found within the UK and beyond.

*Haemophilus influenza* type b (Hib)

2.4 Hib is an infection that can cause invasive disease such as septicaemia, epiglottitis, septic arthritis, pneumonia and meningitis, all of which can be fatal. Individuals can carry Hib bacteria in their nose and throat without showing signs of the disease. Hib is spread through coughing, sneezing or close contact with a carrier. Since the introduction of the Hib immunisation in the UK, disease incidence has fallen. In 2010 there were only 30 reported cases of confirmed invasive Hib infection in the England and Wales.

Men C

2.5 Meningococcal disease results from bacterial infection, the route of transmission is through droplets or respiratory secretions (e.g. coughing and sneezing). There is a marked seasonal variation in meningococcal disease rates, with peak levels in the winter months, usually declining to low levels by late summer. There are at least 13 known serogroups of meningococcal disease. Of these, prior to the introduction of the vaccine, only two – serogroups B and C – were of major importance to the UK.
2.6 Meningococcal infection can cause meningitis (inflammation of the membranes surrounding the brain) and septicaemia (blood poisoning). Septicaemia may occur alone or as part of an attack of meningitis. Meningococcal infection is relatively rare affecting 5 in 100,000 people a year in the UK. Approximately one in ten people who develop meningococcal disease will die. The highest risk of meningococcal disease is in the under one-year-old group, with the one to five age group following closely. The next highest risk group is young people aged 15 to 19 years.

2.7 Since the introduction of MenC vaccine the number of laboratory confirmed group C cases fell by over 90% in those age groups immunised (Salisbury et al, 2001; Trotter et al, 2004) and by two-thirds in other age groups as a result of herd immunity (Trotter et al, 2003). In 1998/9 – the year before vaccine was introduced – there were 955 serogroup C cases reported. There are now around 20 cases per year.

Hib/Men C vaccine – key details

2.6 The key details are that:

- the combined Hib/MenC vaccine was introduced to the national schedule in 2006.
- a combined Hib/Men C booster vaccine is given at 12 months. It builds on the primary Hib and MenC vaccines given as part of the childhood immunisation programme.
- it has a strong evidence base, an excellent safety profile and is highly effective.
- as of April 2012, UK coverage at two years was 92.6% (HPA COVER Data: Q11-4 - Jan- Mar 2012).
3. Scope

Aims

3.1 The aim of the Hib/MenC vaccination programme is to boost children’s immunity against Hib and meningococcal C disease – both associated with significant mortality and morbidity.

Objectives

3.2 The aim will be achieved by delivering an evidence-based, population-wide immunisation programme that:

- identifies the eligible population and ensures effective timely delivery with optimal coverage based on the target population set out in paragraph 4.6
- is safe, effective, of a high quality and is independently monitored
- is delivered and supported by suitably trained, competent healthcare professionals who participate in recognised ongoing training and development in line with national standards
- delivers, manages and stores vaccine in accordance with national guidance
- is supported by regular and accurate data collection using the appropriate returns.

Direct health outcomes

3.3 In the context of health outcomes the Hib/MenC vaccination programme aims to:

- protect the health of individuals and the wider population
Public health functions to be exercised by the NHS Commissioning Board

- reduce the number of preventable infections and their onward transmission
- achieve high coverage across all groups identified
- minimise adverse physical/psychological/clinical aspects of immunisation (e.g. anxiety, adverse reactions).

Baseline vaccine coverage

3.4 Local services should ensure they maintain and improve current immunisation coverage (with reference to vaccine coverage public health outcomes framework indicators) with the aspiration of 100% of relevant individuals being offered immunisation in accordance with the Green Book and other official DH/PHE guidance.

Wider health outcomes

3.5 The national immunisation programme supports the commitment made in the *NHS Constitution* that everyone in England has ‘the right to receive the vaccinations that the Joint Committee on Vaccination and Immunisation (JCVI) recommends that you should receive under an NHS provided national immunisation programme.

3.6 This right is set out in the *NHS Constitution* that was originally published in 2009, and renewed in 2012. The right is underpinned by law (regulations and directions), the regulations require the Secretary of State for Health to fund and implement any cost-effective recommendation made by JCVI where the Secretary of State has asked JCVI to look at a vaccine. Where JCVI makes a recommendation that the vaccine should be offered as part of a national immunisation programme, the DH will fund and implement the programme.

3.7 The programme can be universal like men C or a targeted programme like hep B, and those who fit the JCVI criteria (for example, HPV criteria include age and gender) will have a right to receive the vaccine. To balance this right, the *NHS Constitution* introduced a new patient responsibility that states ‘You should participate in important public health programmes such as vaccination’. This does not mean that vaccination is compulsory. It simply reminds
people that being vaccinated is a responsible way to protect their own health, as well as that of their family and community.

3.8 The NHS Health and Social Care Act 2012, is wholly consistent with the principles of the *NHS Constitution* and places new legal duties which require the NHS CB and Clinical Commissioning Groups (CCGs) to actively promote it.

3.9 The Hib/MenC vaccination, as part of the childhood immunisation programme, forms a key part of the Healthy Child Programme (HCP). The HCP is an early intervention and prevention public health programme that lies at the heart of universal services for all children and families. The HCP offers all families a programme of screening tests, immunisations, developmental reviews, information and guidance to support parenting and healthy choices – all of which are services that families need to receive if they are able to achieve their optimal health and wellbeing. NHS CB should therefore cross-reference to the provisions of the HCP.

3.10 The programme also works towards achieving the World Health Organization’s (WHO) ‘Global immunisation and strategy’ (2006) which is a ten-year framework aimed at controlling morbidity and mortality from vaccine preventable diseases.
4. Service description / care pathway

Roles

4.1 The NHS CB will be responsible for commissioning the local provision of immunisation services and the implementation of new programmes though general practice and all other providers. It will be accountable to the Secretary of State for Health for delivery of those services. Other bodies in the new comprehensive health system will also have key roles to play and it will be vital to ensure strong working relationships.

4.2 Public Health England (PHE) will undertake the purchase, storage and distribution of vaccines at a national level. It will hold the coverage and surveillance data and have the public health expertise for analysing the coverage of, and other aspects of, immunisation services. It will also be responsible for the implementation of the national immunisation schedule, including the national communication strategy, setting standards and following recommendations as advised by JCVI and other relevant organisations.

4.3 Directors of public health (DsPH) based in local authorities play a key role in providing independent scrutiny and challenge and will publish reports on the health of the population in their areas, which could include information on local immunisation services and views on how immunisation services might be improved. The NHS CB should expect to support DsPH in their role by sharing information as appropriate and according to need, for example vaccine coverage within communities (such as, among populations with protected characteristics as defined by the Equalities Act).

Local service delivery

4.4 The delivery of immunisation services at the local level is based on evolving best practice that has been built since vaccinations were first introduced more than a hundred years ago. This section of the document specifies the high-level operational elements of the Hib/MenC vaccine programme, based on that best practice that the NHS CB must use to inform local commissioning, contracts and service delivery. There is also scope to enable NHS CB and providers to enhance and build on specifications to incorporate national or local service aspirations that may include increasing local innovation in service delivery. However, it is essential, in order to promote a nationally aligned, high-quality programme focusing on
improved outcomes, increasing coverage and local take-up that all the following core elements are included in contracts and specifications.

4.5 The following elements must be covered:

- target population
- vaccine schedule
- consent
- assessment prior to immunisation
- vaccine administration
- vaccine storage and wastage
- vaccine ordering
- documentation
- reporting requirements (including adverse events and vaccine preventable diseases)
- staffing and training
- premises and equipment
- patient involvement
- governance
- service improvement
- interdependencies
- local communication strategies.

4.6 Most of these elements are covered in the Green Book, which must be read in conjunction with this service specification (http://immunisation.dh.gov.uk/category/the-green-book/)
4.7 More detailed information on at risk groups is available in chapter 19 of the Green Book (www.dh.gov.uk/greenbook).

Target population

4.8 NHS CB must ensure that providers will be required to make the Hib/MenC vaccine available to:

- all children both registered and unregistered with a GP, as part of the childhood immunisation programme’s primary immunisation course, up to the age of ten years
- there is no upper age limit for vaccination, and those at particular risk may require vaccination with a different product, even if above the age of the current national programme. Protection against Hib should be offered routinely to unvaccinated or partially vaccinated individuals up to the age of ten years, or for those at particular risk as outlined in the Green book
- children from hard to reach groups, for example gypsy traveller children or looked after children who may require special and specific arrangements.

4.9 In addition:

- local ‘catch-up’ arrangements should be available to prevent to outbreaks in areas with poor uptake
- health professionals should take all opportunities, particularly those contacts during the early years, to check vaccination status and remind parents and carers of the importance of immunisations and the need to have them at the appropriate times
- the vaccination status of every child should be checked at each visit (for example the pre-school booster) and missing doses of relevant antigens offered as appropriate to ensure that everyone has completed an age-appropriate course
- healthcare workers with direct patient contact should have their immunisation status checked and where needed should be offered appropriate immunisations
Public health functions to be exercised by the NHS Commissioning Board

- all new employees should undergo a pre-employment health assessment, which should include a review of immunisation needs.

Vaccine schedule

4.10 A locally commissioned service should immunise the target population following the national vaccination schedule.

- One dose at 12 months of age (along with the PCV booster and MMR)
- In order to provide early protection, providers should aim to complete the schedule at near as possible to the recommended ages.
- Sufficient immunisation appointments must be available so that children can receive vaccinations on time – waiting lists are not acceptable.
- Further information on scheduling for risk groups is available in the relevant chapters of the Green Book www.dh.gov.uk/greenbook.

Consent

4.11 Chapter 2 in the Green Book provides up-to-date and comprehensive guidance on consent, which relates to both adults and the immunisation of younger children. There is no legal requirement for consent to be in writing but sufficient information should be available to make an informed decision.

4.12 Therefore, providers will be required to ensure that:

- consent is obtained prior to giving any immunisation
- consent is given voluntarily and freely
Public health functions to be exercised by the NHS Commissioning Board

- individuals giving consent on behalf of infants and young children must be capable of consenting to the immunisation in question
- relevant resources (leaflets/factsheets, etc.) are used as part of the consent process to ensure that all parties (both parents and where appropriate individuals) have all the available information about the vaccine and the protection it offers
- professionals should be sufficiently knowledgeable about the disease and vaccine and to be able to answer any questions with confidence
- the patient has access to the patient information leaflet (PIL)
- for infants and young children not competent to give or withhold consent, such consent can be given by a person with parental responsibility, provided that person is capable of consenting to the immunisation in question and is able to communicate their decision. Although a person may not abdicate or transfer parental responsibility, they may arrange for some or all of it to be met by one or more persons acting on their behalf.

Requirements prior to immunisation

4.13 As part of the commissioning arrangements, NHS CB is required to ensure that providers adhere to the following. That providers have:

- systems in place to assess eligible individuals for suitability by a competent individual prior to each immunisation
- assessed each child to ensure they are suitable for immunisation
- assessed the immunisation record of each child to ensure that all vaccinations are up to date
- systems in place to identify, follow-up and offer immunisation to eligible individuals. In some areas, contracts may be in place for Child Health Information Systems (CHIS) to invite young people for vaccination
- arrangements in place that enable them to identify and recall under or unimmunised individuals and to ensure that such individuals are immunised in a timely manner
Public health functions to be exercised by the NHS Commissioning Board

- systems in place to optimise access for those in hard to reach groups (e.g. gypsy travellers, looked after children)

- arrangements in place to access specialist clinical advice so that immunisation is only withheld or deferred where a valid contraindication exists.

4.14 Practices that do their own scheduling should ensure their systems allow them to fulfil the actions outlined above.

Vaccine administration

4.15 As part of the commissioning arrangements, NHS CB are required to ensure the provider adheres to the following:

- professionals involved in administering the vaccine, have the necessary skills, competencies and annually updated training with regard to vaccine administration and the recognition and initial treatment of anaphylaxis

- regular training and development (taking account of national standards – see section 5) is routinely available. Training is likely to include diseases, vaccines, delivery issues, consent, cold chain, vaccine management and anaphylaxis

- the professional lead should ensure that all staff are legally able to supply and/or administer the vaccine by:
  - working under an appropriate patient group direction (PGD)
  - working from a patient specific direction (PSD)/prescriptions, or
  - working as a nurse prescriber (if appropriate).
Vaccine storage and wastage

4.16 Effective management of vaccines is essential to ensure patient safety and reduce vaccine wastage. NHS CB should ensure that providers will:

- have effective cold chain and administrative protocols that reduce vaccine wastage to a minimum which reflect DH national protocols (Ch 3 of the Green Book and the ‘Guidelines for maintaining the vaccine cold chain’) and includes:
  - how to maintain accurate records of vaccine stock
  - how to record vaccine fridge temperatures
  - what to do if the temperature falls outside the recommended range
  - [link to DH document]
  - [link to ImmForm helpsheet]
- ensure all vaccines are delivered to an appointed place
- ensure that at least one named individual is responsible for the receipt and safe storage of vaccines in each general practice or other appropriate location
- ensure that an approved vaccine fridge is available for the storage of all vaccines
- ensure that approved pharmaceutical grade cold boxes are used for transporting vaccines
- ensure that only minimum stock levels (two to four weeks maximum) of vaccine will be held in local fridges, to reduce the risk of wastage caused by power cuts or inadvertent disconnection of fridges from power supplies
- report any cold chain failures to the local coordinator and PHE and NHS CB.

4.17 Vaccine supply will be controlled by the PHE vaccine supply department.

Vaccine ordering
4.18 Vaccines can be ordered by:

- GP practices/hospital pharmacies for delivery to their location
- appropriate providers (with a wholesale dealers licence) for delivery to their location.

4.19 Further information:

- providers can register to order vaccine via ImmForm:
  - online: http://www.immform.dh.org.uk/registration
  - via email: Send your request to immform@dh.gsi.gov.uk

- Further help is available at:
  - http://immunisation.dh.gov.uk/immform-helpsheets/
  - ImmForm Help Desk 0844 376 0040.

Documentation

4.18 Accurate recording of all vaccines given and good management of all associated documentation is essential. Providers should ensure that:

- the patient’s medical records are updated with key information that includes:
  - any contraindications to the vaccine and any alternative offered
  - any refusal of an offer of vaccination
  - details of consent and the person who gave the consent. The batch number, expiry date and the title of the vaccination
  - the date of administration of the vaccine
  - the site and route of administration
Public health functions to be exercised by the NHS Commissioning Board

• any adverse reactions to the vaccine
• name of immuniser.

• the parent held record should be updated or the parent/carer should be given a personal record which should include:
  • the batch number, expiry date and the title of the vaccination
  • the date of administration of the vaccine
  • the site and route of administration
  • any adverse reactions to the vaccine
  • name of immuniser.

Reporting requirements

4.19 The collection of data is essential. It has several key purposes including the local delivery of the programme and the monitoring of coverage at national and local level, outbreak investigation and response as well as providing information for ministers and the public. In-depth analysis underpins any necessary changes to the programme, which might include the development of targeted programmes or campaigns to improve general coverage of the vaccination.

• The provider must ensure that information on vaccines administered is documented and that this information is transferred to the general practice record. In most areas, the Child Health Information System (CHIS) will inform GPs that a patient on their list has been immunised via the current vaccination history printout. The CHIS is a patient administration system that provides a clinical record for individual children, records the vaccination details of each individual child resident in the local area from birth.

• The provider must ensure that information on vaccines administered is submitted directly to any relevant population immunisation register, in most areas the CHIS.
Public health functions to be exercised by the NHS Commissioning Board

- Following an immunisation session/clinic or individual immunisation, local arrangements should be made for the transfer of data onto the relevant CHIS. Where possible this should aim to be within two working days.

- Arrangements will also be required to inform neighbouring areas when children resident in their area are immunised outside their local area through the CHIS system.

- Any reported adverse incidents, errors or events during or post vaccination must follow determined procedures in addition teams must keep a local log of reports and discuss such events with the local immunisation co-ordinator.

- Suspected adverse reactions must be reported to the MHRA via the Yellow Card Scheme [www.mhra.gov.uk/yellow](http://www.mhra.gov.uk/yellow) card, including the brand number and batch number in addition to following local and nationally determined procedures.

- Providers are required to report cases of suspected vaccine preventable diseases to the local PHE centre.

- Any cold chain failures must be documented and reported to the local immunisation co-ordinator and PHE/ImmForm as appropriate.

Staffing including training

4.20 To deliver a national immunisation programme it is essential that all staff are appropriately trained. NHS CB must ensure that providers:

- have an adequate number of trained, qualified and competent staff to deliver a high quality immunisation programme in line with best practice and national policy

- are covered by appropriate occupational health policies to ensure adequate protection against vaccine preventable diseases (e.g. measles, flu and hepatitis B)
Public health functions to be exercised by the NHS Commissioning Board

- meet the HPA *National minimum standards in immunisation training* 2005 either through training or professional competence ensuring that annual training is offered to all staff
- have had training (and annual updates) with regard to the recognition and initial treatment of anaphylaxis
- ensure that all staff are familiar with and have online access to the latest edition of the Green Book
- ensure that all staff are registered to receive *Vaccine Update* (http://immunisation.dh.gov.uk/vu-190-jun-12/)
- ensure that all staff are aware of the importance of and can access the CMO/Chief Nursing Officer/Chief Pharmaceutical Officer (CMO/CNO/CPhO) letters that announce changes to or new programmes, the Director of Immunisation letters, and additional guidance on the (PHE) website.

Premises and equipment

4.21 Appropriate equipment and suitable premises are needed to deliver a successful immunisation programme. NHS CB must ensure that providers have:

- suitable premises and equipment provided for the immunisation programme
- disposable equipment meeting approved standards
- appropriate disposal arrangements in place (e.g. approved sharps bins, etc.)
- appropriate policies and contracts in place for equipment calibration, maintenance and replacement
- anaphylaxis equipment accessible at all times during an immunisation session and all staff should have appropriate training in resuscitation
- premises that are suitable and welcoming for young children, and their carers and all individuals coming for immunisation including those for whom access may be difficult.
Governance

4.22 It will be essential to ensure that there are clear lines of accountability and reporting to assure the ongoing quality and success of the national programme. Commissioning arrangements will ensure that:

- there is a clear line of accountability from local providers to NHS CB
- at the provider level there is appropriate internal clinical oversight of the programme’s management and a nominated lead for immunisation
- provider governance is overseen by a clinical lead (for example the local immunisation co-ordinator) and immunisation system leader
- there is regular monitoring and audit of the immunisation programme, including the establishment and review of a risk register as a routine part of clinical governance arrangements, in order to assure the NHS CB of the quality and integrity of the service
- for providers to supply evidence of clinical governance and effectiveness arrangements on request for the NHS CB or its local offices
- PHE will alert NHS CB to any issues that need further investigations
- the provision of high quality, accurate and timely data to relevant parties including PHE, NHS CB and local authorities (Las) is a requirement for payment
- data will be analysed and interpreted by PHE and any issues that arise will be shared quickly with NHS CB and others
- local co-ordinators will document, manage and report on programmatic or vaccine administration errors, including serious untoward incidents (SUIs), and escalate as needed. This may include involving the NHS CB and relevant partners and where appropriate for the NHS CB to inform DH
- That NHS CB press office will liaise closely with DH, PHE, and MHRA press offices regarding the management of all press enquiries
- have a sound governance framework in place covering the following:
  - information governance/records management
  - equality and diversity
Public health functions to be exercised by the NHS Commissioning Board

- user involvement, experience and complaints
- failsafe procedures
- communications
- ongoing risk management
- health and safety
- insurance and liability.

Service improvement

4.23 NHS CB and providers will wish to identify areas of challenge within local vaccination programmes and develop comprehensive, workable and measurable plans for improvement. These may be locally or nationally driven and are likely to be directed around increased coverage and may well be focused on particular hard to reach groups. Suggestions for improving service and uptake include:

- NICE guidelines (NICE 2009 Reducing differences in the uptake of vaccines) highlight evidence to show that there are particular interventions, which can increase immunisation rates.

4.24 Providers should also consider the following suggestions:

- up-to-date patient reminder and recall systems
- well-informed healthcare professionals who can provide accurate and consistent advice
- high quality patient education and information resources in a variety of formats (leaflets, internet forums and discussion groups)
- effective performance management of the commissioned service to ensure it meets requirements
- local co-ordinators or experts based in PHE to provide expert advice and information for specific clinical queries
Public health functions to be exercised by the NHS Commissioning Board

- for NHS CB and providers to have clear expectations to improve and build upon existing immunisation rates.

Interdependencies

4.25 The immunisation programme is dependent upon systematic relationships between stakeholders, which include vaccine suppliers, primary care providers, NHS CB, etc. The immunisation co-ordinator, based in the Local Area Team (LAT) of the NHS CB, will be expected to take the lead in ensuring that inter-organisational systems are in place to maintain the quality and the immunisation pathway. This will include, but is not limited to:

- ensuring all those involved in pathways are sure of their roles and responsibilities
- developing joint audit and monitoring processes
- agreeing joint failsafe mechanisms, where required, to ensure safe and timely processes along the whole pathway
- contributing to any initiatives led by the NHS CB/PHE to develop/improve the childhood immunisation programme
- maintaining an up-to-date population based immunisation register to provide coverage data and for outbreak investigation and response
- maintaining robust electronic links with IT systems and relevant organisations along the pathway
- local feedback and review of coverage and disease surveillance data.

Communication strategies

4.26 It will be important to develop and implement communication strategies to support both the introduction of new vaccines and the maintenance of existing programmes. Such strategies may be developed on a national basis. Local strategies may also be developed to further support national programmes or address specific issues.
Public health functions to be exercised by the NHS Commissioning Board
5. Service standards and guidance

5.1 To support the delivery of an effective and high quality childhood immunisation programme, NHS CB and providers must refer to and make comprehensive use of the following key resources:

- **Green Book – *Immunisation against infectious disease* (DH 2006)**
  
  [www.dh.gov.uk/publichealth.immunisation.greenbook](http://www.dh.gov.uk/publichealth.immunisation.greenbook)

- **Quality criteria for an effective immunisation programme** (HPA, 2012)
  

- **National minimum standards for immunisation training** (HPA June 2005)
  

- **Protocol for ordering, storing and handling vaccines** (DH Sept 2010)
  

- **National Patient Safety Agency – *Advice on vaccine cold storage***
  

- **Official immunisation letters** (DH)
  

- **ImmForm information**
Public health functions to be exercised by the NHS Commissioning Board
