MG NSRF - Police National Stats Form 113
1. INTRODUCTION

1.1 The STATS20 manual provides a detailed explanation of the information, referred to as STATS19, which is the set of data which has to be collected by a Police Officer when an injury road accident is reported to them.

1.2 This is the 2005 edition of STATS20 and incorporates amendments arising from the 2002 Quinquennial Review of Road Accident Data, as approved by the Standing Committee on Road Accident Statistics (SCRAS). SCRAS comprises representatives from the Department for Transport (DfT), police forces, local authority associations and other Government departments with an interest in the collation of road accident data.

1.3 The STATS19 reports are analysed nationally by reference to a great variety of characteristics and attendant circumstances and the results are used extensively for research work and for guidance in the improvement of road safety in relation to roads, road users, vehicles and traffic movement. The data also form the basis for annual statistics on road accidents and casualties published by DfT, the Scottish Executive (SE) and the National Assembly for Wales (NAfW). Local authorities also publish similar statistics.

1.4 Local authorities also make extensive use of road accident data. Engineers use it extensively for establishing priority sites for remedial measures and previous experience has shown that even low cost measures can be extremely effective in reducing or eliminating accidents at particular sites.

1.5 Road safety officers also gain much of their evidence on which to base national and local educational programmes and training from the data which accrue from local road accident statistics.

1.6 The police, who collect these data, also use them as a guide to the operational tactical deployment of their patrols in order to fulfil one of their primary roles, the reduction of casualties.

1.7 The accumulated data, over long periods of time, is also used by a range of establishments for research into road safety measures.

1.8 It is because of the many various uses to which this data is put that the need for accuracy and prompt return is paramount. The speedy return of accurate data will not only be of value to those bodies noted above but will also do much to enhance the early publication of Departmental accident and casualty statistics, which are of great use to those working in the field of accident prevention and road safety education.

1.9 A separate document, STATS21, describes:

(a) The validity checks and error procedures to be carried out locally on STATS19 data;

(b) The procedures for writing and submitting data to DfT/SE/NAfW;

(c) The specification of media formats in which the data can be submitted to DfT, SE or NAfW;

(d) The procedures for dealing with rejections or queries of data received by DfT/SE/NAfW.

1.10 By "Reported" it is meant that STATS19 data for the injury accident has to be collected by the Police Force concerned and then passed on to DfT/SE/NafW and local highway authority in the agreed format.
2. **ACCIDENTS TO BE REPORTED**

2.1 All road accidents involving human death or personal injury occurring on the Highway ('road' in Scotland) and notified to the police within 30 days of occurrence, and in which one or more vehicles are involved, are to be reported. This is a wider definition of road accidents than that used in Road Traffic Acts.

2.2 Examples of accidents **to be reported** include:

(a) accidents which commence on the highway but which involve casualties off the highway (e.g. where a vehicle runs out of control while on the highway and causes casualties elsewhere);

(b) accidents involving the boarding and alighting of buses or coaches and accidents in which passengers already aboard a bus/coach are injured, whether or not another vehicle or a pedestrian is involved;

(c) accidents to pedal cyclists or horse riders, where they injure themselves or a pedestrian;

(d) accidents resulting from deliberate acts of violence, but excluding casualties who are subsequently identified as confirmed suicides;

(e) accidents within bus stations/interchanges **where they form part of the highway**;

(f) accidents in Royal Parks (on roads to which the public have motor vehicle access)

2.3 Examples of accidents **which should not be reported** include:

(a) accidents which do not involve personal injury;

(b) accidents on private roads (except Royal Parks) or in car parks;

(c) accidents reported to the police 30 or more days after they occurred;

(d) accidents involving confirmed suicides only.

**NOTES**

A. The Road Traffic Act 1988 (section 170), as amended by Section 72 of the 1991 Act, stipulates that all fatal or injury accidents on public roads involving at least one mechanically propelled vehicle should be reported by the public to the police unless insurance documents, name and address, and details of vehicle ownership and registration are exchanged between drivers. This legislation defines the duty of the public to report a personal injury road accident.

B. In the past the interpretation of "mechanically propelled vehicle" has varied widely between local police forces, particularly about whether pedal cycle accidents, not involving a motor vehicle, should be reported. **The STATS19 requirement is clear that all accidents involving non-motor vehicles such as pedal cycles and ridden horses on 'public roads' (see 2.4) should be reported, regardless of motor vehicle or pedestrian involvement.** See Note K on page 45 for other examples of non-motor vehicles. Also, Note C on page 71 contains examples which should not be treated as vehicles.
2.4 The following table gives examples of locations at which accidents should or should not be reported:

<table>
<thead>
<tr>
<th>Location</th>
<th>Included in STATS19?</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Highway</strong></td>
<td></td>
</tr>
<tr>
<td>Motorway (including A(M) road)</td>
<td>Yes</td>
</tr>
<tr>
<td>‘A’, ‘B’ or ‘C’ road</td>
<td>Yes</td>
</tr>
<tr>
<td>Unclassified road</td>
<td>Yes</td>
</tr>
<tr>
<td>Toll road or bridge where Secretary of State or local authority is the highway authority</td>
<td>Yes</td>
</tr>
<tr>
<td><strong>Highway - limited access road or lane</strong></td>
<td></td>
</tr>
<tr>
<td>Pedestrianised road with limited access for motor vehicles</td>
<td>Yes</td>
</tr>
<tr>
<td>Bus lane, busway or guided busway</td>
<td>Yes</td>
</tr>
<tr>
<td>Tram or light rail track</td>
<td>Yes (if part of Highway)</td>
</tr>
<tr>
<td>Cycle lane, cycleway or shared access footway</td>
<td>Yes (if part of Highway)</td>
</tr>
<tr>

<tr>
<td>Picnic areas</td>
<td>No</td>
</tr>
<tr>
<td>Pedestrian malls</td>
<td>No</td>
</tr>
</tbody>
</table>

**NOTE**

Highway ("road" in Scotland) is a road with unrestricted right of access for all or some classes of motor vehicles.
3. VEHICLES TO BE REPORTED

3.1 Complete vehicle details, regardless or whether the vehicle was damaged or not, are required for each vehicle which was involved in, or contributed to, an injury accident. This includes pedal cycles, ridden horses and horse-drawn vehicles. (See Note K on page 45 for other examples of non-motor vehicles).

Including:

(a) vehicles in which driver/rider/passenger was injured;
(b) vehicles which suffered damage in the accident;
(c) vehicles which caused injury to a pedestrian (including parked vehicles on or off the carriageway into which a pedestrian walked);
(d) vehicles which were in collision with another vehicle in the accident;
(e) vehicles which did not suffer damage, nor caused nor contained casualties, but which contributed to the accident (includes parked, stationary, temporarily held-up or moving vehicles).
4. CASUALTIES TO BE REPORTED

4.1 Any persons killed or injured in a road accident (as defined in 2.1)

Including:

(a) a person who moves quickly to avoid being involved in an accident, is successful in that, but in doing so incurs an injury (eg. twists an ankle). Also includes occupant of vehicle which manoeuvres or brakes suddenly to avoid an impact, but in so doing sustains an injury;

(b) a pedestrian who injures himself on a parked vehicle;

(c) a person who is injured after falling from a vehicle;

(d) a person who is injured boarding or alighting a bus or coach;

(e) a person injured whilst aboard a bus or coach, whether or not another vehicle is involved;

(f) a person who is injured away from the carriageway as a result of an accident which commenced on the public highway;

(g) all casualties in accidents arising from deliberate acts of violence involving a vehicle;

Excluding:

(h) death/injury to babies unborn up to the time of the accident;

(i) person injured in a road accident as a result of illness (eg. fit) immediately prior to the accident, where injury is deemed to be a result of the illness rather than the road accident. All other casualties involved in the accident should be included;

(j) person who dies in a road accident from natural causes (eg. heart attack) and whose death is not ascribed by the Coroner's Court (Procurator Fiscal in Scotland) to have been a result of the accident. Other casualties in these accidents should be reported;

(k) confirmed suicides. Other casualties in these accidents should be reported. Injured persons suspected of having attempted suicide should be reported;

(l) any person who witnesses an accident and suffers shock but who is not directly involved.

NOTES

A. Cases (j) and (k) may be reported to DfT/SE/NAfW in the first instance, pending the decision of the Coroner's Court (or Procurator Fiscal). It may, therefore, be necessary for the police/local processing centre to notify DfT/SE/NAfW if, at a later stage, such cases are to be deleted from their computer records (see STATS21).

B. Definitions of casualty severity can be found in Section 3.9 of Annex 3, on page 74.
5. CONTRIBUTORY FACTORS

5.1 The Contributory Factors (see page 116) in a road accident are the key actions and failures that led directly to the actual impact. They show why the accident occurred and give clues about how it may have been prevented.

5.2 The Accident, Vehicle and Casualty records mainly record objective details. The Contributory Factors are largely subjective and depend on the skill and experience of the investigating officer to reconstruct the events which led directly to the accident. The notes in Annex 4 aim to present the system clearly and so to minimise the scope for differences in reporting. However, the need to exercise judgement when recording Contributory Factors is unavoidable.

5.3 The Contributory Factors reflect the Reporting Officer's opinion at the time of reporting and are not necessarily the result of extensive investigation. Furthermore, it is recognised that subsequent enquiries could lead to the reporting officer changing his opinion. This is not a problem.

5.4 Factors should be identified on the basis of evidence rather than guesses about what may have happened. This evidence can come from various sources such as witness statements, vehicle and site inspections. It can be of variable quality, which is the reason for recording the assessment of the reliability of the Contributory Factors.

5.5 When there is conflicting evidence (eg. conflicting witness statements) the reporting officer should decide on the most plausible account of the accident and, taking into account all other available evidence, base the codes on this.

5.6 Procedure:

1. Select up to six factors from the grid, relevant to the accident.

2. Factors may be shown in any order, but an indication must be given of whether each factor is very likely (A) or possible (B).

3. Only include factors which have contributed to the accident (eg. do not include "Poor road surface" unless it was relevant to the accident).

4. More than one factor may, if appropriate, be related to the same road user.

5. The same factor may be related to more than one road user.

6. The participant should be identified by the relevant vehicle or casualty reference number (eg. 001, 002 etc), preceded by "V" if factor applies to a vehicle, driver/rider or the road environment (eg. V002), or "C" if the factor relates to a pedestrian or passenger casualty (eg. C001).

7. Enter "U000" if the factor relates to an uninjured pedestrian.
ANNEX 1 - ATTENDANT CIRCUMSTANCES VARIABLES

1.1 RECORD TYPE

CODES

11. New accident record
15. Amended accident record

NOTES

A. First box always coded 1 to enable accident records to be easily identified during computer processing and analysis at local and national levels.

B. In second box, code 5 only to be used when an accident record already sent to DfT/SE/NAfW is to be replaced by an amended record.
1.2 POLICE FORCE

NOTES

A. Enter the code number of the police force in whose area the accident occurred. The relevant codes are listed in Annex 6 on page 103.

B. Note that leading zeros are incorporated in some of these codes and must be entered (eg. the code for Cumbria is entered as 03).
1.3 ACCIDENT REFERENCE

NOTES

A. The accident reference allocated by the police must be unique within that police force for the accident and for the calendar year in which it took place. It must also be sufficient for the police to identify the accident in the event of a query.

B. The accident reference may contain a total of 7, or fewer, numbers and/or alphabetic characters in any sequence convenient to Police Force requirements.

C. Unused spaces to the left of accident references containing less than 7 characters are to be coded zero (eg. ABC123 would be coded 0ABC123).
1.5 NUMBER OF VEHICLE RECORDS

NOTES

A. Enter the number of vehicle records submitted for the accident.

B. Unused boxes to the left of the number of vehicles should be coded zero (e.g., if 2 vehicles were involved, this item would be coded 002).
1.6 NUMBER OF CASUALTY RECORDS

NOTES

A. Enter the number of casualty records submitted for the accident.

B. Unused boxes to the left of the number of casualty records should be coded zero (eg. if there were 3 casualty records, this item would be coded 003).
<table>
<thead>
<tr>
<th>Day</th>
<th>Month</th>
<th>Year</th>
</tr>
</thead>
</table>

**NOTES**

A. The first two boxes are to be used for the day, the second two for the month and the remaining two for the last two digits of the year.

B. Accident year will be converted to four characters by DfT/SE/NAfW.

C. Unused boxes to the left of the day or month are to be entered as zeros (eg. 9 June 2005 would be coded as 090605).
NOTES

A. The hours, on a 24 hour system, are to be entered in the first two boxes.

B. The number of minutes past any of these hours should be recorded in the two right hand boxes, to the nearest minute.

C. Zeros should be entered where necessary, i.e. 8 minutes past 9am. is entered as 0908.

D. The coding 0000 is not permitted. Midnight should be coded 0001.
1.10 LOCAL AUTHORITY

NOTES

A. Enter the code number of the local authority in whose area the accident occurred.

B. The codes are listed in Annex 7 on pages 104-111.

C. Note that leading zeros are incorporated in some of these codes and must be entered (eg. the code for Westminster is entered as 001).
### 1.11 LOCATION

<table>
<thead>
<tr>
<th>Easting</th>
<th>Northing</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>

10 DIGIT ORDNANCE SURVEY GRID REFERENCE NUMBER

**NOTES**

A. The standard numeric 10 digit grid reference must be used.

B. The first digit of both easting and northing define the national 100 kilometre square. The second digit of both easting and northing define the national 10 kilometre square. The third digit of both easting and northing define the national 1 kilometre square. The fourth digit of both easting and northing define the national 100 metre square. The fifth digit of both easting and northing define the national 10 metre square.

Example: 52617 36911

Further details are available on Ordnance Survey Maps.

C. Local authorities/police using link/node systems are expected to code their accidents on the above basis but a local authority can have an additional variable for link/node reference on its local variant of STATS19 for local use if it so chooses. If so, this information is not to be sent to DfT/SE/NAfW.

D. Alpha map reference nodes are not acceptable.

E. This variable is used by most local authorities, by DfT headquarters and by regional offices. In the past many errors have been found, such as displaced figures, faulty translation of the 100 kilometre square letters to digits and transposition of the easting and northing. Data should, therefore, be validated by the local processing authority before transmission to DfT/SE/NAfW.

F. An accident should usually be located where the first impact, at which an injury was sustained, occurred, although there may be circumstances in which the LPA feel it more appropriate to locate the accident at the point where a vehicle lost control. Where a vehicle impacts after having left the carriageway, the accident should, normally, be located at the point at which the vehicle first left the carriageway.
1.12 1st ROAD CLASS

CODES

1. Motorway
2. A(M)
3. A
4. B
5. C
6. Unclassified

NOTES

A. Enter the code number for the class of the road on which the accident location is being recorded.

B. For an accident at a junction, where the accident cannot clearly be allocated to one specific road, the class of the main road, should be the one which is entered here. The main road is defined as the road which has priority. For roundabouts and signal controlled junctions, the main road is the one with the highest class of all the roads entering the junction. If roads are of equal class then the road with the lowest number should be taken as the main road.

C. It is for individual local processing authorities to decide whether or not to separately identify 'C' roads. Where this is not done, such roads should be coded 6 'Unclassified'.

D. The Road Class for an accident occurring on a Service Road running alongside a major road should be coded according to the class of the Service Road itself (usually 'Unclassified'), not the major road.

E. Codes 1 - 4 must be accompanied by a valid road number in 1.13 (1st Road Number).

F. See also "Examples for coding the locations of accidents and vehicles" on page 23.
1.13 1st ROAD NUMBER

NOTES

A. Enter the road number of the road whose class was entered at 1.12 (1st Road Class). See 1.12 Note B where the accident cannot be clearly allocated to one specific road.

B. If the road number contains less than four digits, leading zeros should be inserted to the left of the number (eg. A46 is coded 0046).

C. If 1.12 is coded 5 or 6, the local processing authority will decide whether a road number is required.

D. If 1.12 is coded 1 - 4, 1.13 must contain a valid road number.
1.14 ROAD TYPE

CODES
1. Roundabout
2. One way street
3. Dual carriageway
6. Single carriageway
7. Slip Road
9. Unknown

NOTES
A. Enter the appropriate code for the road on which the accident occurred.
B. The road type for an accident which occurs off the main carriageway (eg. footway or cycleway) should be coded as appropriate for the main carriageway. Eg. the road type for an accident occurring on a cycleway running alongside a dual carriageway should be coded 3.
C. For junction accidents, where the road layout at the scene of the incident is different from the general road type, the code appropriate to the general road type should be used. Eg. an accident which occurs on the approach to a junction, where, for a short section, the road has a central reservation, but where the general road type is Single Carriageway, should have Road Type coded 6.
D. Roundabout includes mini-roundabouts and large, purpose built gyratory systems. Where existing streets have been made into a one way (gyratory) system the Road Type should be coded 2.
E. One way streets with contraflow bus or cycle lanes should be coded 3 or 6, as appropriate.
F. Slip roads are dedicated to getting traffic from one road to another. They include roads connecting grade separated roads (i.e. roads at different levels) and "filter lanes" at non-grade separated junctions which connect two roads by avoiding a roundabout or other junction. Includes slip lanes marked by white lines at roundabouts, but which are not physically separated from the roundabout.
G. A dual carriageway is a road in which the opposing carriageways are physically separated (eg. by a central reservation or barrier). Carriageways separated only by line markings (or no markings at all) are single.
H. If a contraflow is on a dual carriageway due to roadworks, use code 3 as normal but enter code 4, 'Road works present' in 1.24 (Special Conditions).
I. Code 9 'Unknown' should only be used in exceptional circumstances where no information on road type is available, or where the other Road Type codes are inappropriate.
J. If 1.15 (Speed Limit) is coded 70, 1.14 must not be coded 6.

</table>
1.15 SPEED LIMIT (Permanent) 0 MPH

NOTES

A. This applies to the general speed limit applicable to the road on which the accident occurred, not to that governing a specified class of vehicle (eg. articulated vehicle or tram), even when such a vehicle is involved.

B. The actual limit in mph is to be entered in every case.

C. Where a lower variable or temporary speed limit is in force (mandatory or otherwise) the normal speed limit applicable to the road, not the temporary one, should be entered. Possible examples include sections of roads outside schools at certain times of day, roadworks sites and sections of the M25.

D. Speeds of under 20mph should only be used in very exceptional circumstances and the reporting officer should confirm that the accident is on a Highway (‘road’ in Scotland). See Section 2, pages 6 and 7.

E. The local processing authority should query any speed limit coded other than 20, 30, 40, 50, 60 or 70mph, as to whether the accident actually occurred on the highway.
1.16 JUNCTION DETAIL

CODES

00. Not at or within 20 metres of junction
01. Roundabout
02. Mini roundabout
03. T or staggered junction
05. Slip road
06. Crossroads
07. Multiple junction
08. Using private drive or entrance
09. Other junction

NOTES

A. Junction is defined as a place where two or more roads meet (excluding where one of the roads crosses the other by a bridge or flyover) whatever the angle of the axes of the roads. The meeting point of a public highway and private drive (in use at time of accident) is a junction for this purpose.

B. If there are two or more junctions within 20 metres of the accident, code the junction which is closest to the accident.

C. A gap in the central reservation of a road is not a junction and should be coded 00 unless other roads join the dual carriageway at that point.

D. Code 00 is to be used when the accident occurs more than 20 metres from a junction. Codes 01 - 09 must be used for points at or within 20 metres of a junction.

E. 'Roundabout' includes the whole of the circular highway and sections of the roads leading into it (within 20 metres of the circular highway). Roundabout also includes sections of large gyratory systems which are within 20 metres of entrance/exit points. Where an accident occurs more than 20 metres from entrance/exit point, code 00 should be used.

F. A 'mini-roundabout' is a roundabout having a flush or slightly raised circular marking less than 4 metres in diameter.

G. Code 03, 'T or staggered junction' includes 3 arm junctions at which 2 roads join at an acute angle (previously known as "Y" junction).

H. Use code 05 'Slip road' only for accidents occurring within 20 metres of the point where a slip road (including filter lane at roundabout - See 1.14 Note F) merges with or diverges from the nearside of the main carriageway.

Accidents occurring on slip roads, within 20 metres of a roundabout should be coded 01 or 02 as appropriate. Accidents occurring on slip roads which are not within 20 metres of a junction should be coded 00.

I. Crossroads: four arm junction where the alignments of both roads are uninterrupted whatever the angle of the crossing, and the arms are not staggered.

J. Multiple Junction: a junction with more than 4 arms (except roundabouts).

K. Using Private Drive or entrance: not to be used merely to record the presence of a private drive or entrance. Only for use where the private drive or entrance is being used by a vehicle involved in the accident.
L. Other Junction: only to be used in exceptional circumstances where the junction is not defined above.

M. If 1.16 is coded 01 - 03 or 05 - 09, items 1.17 (Junction Control), 1.18 (2nd Road Class) and, if applicable, 1.19 (2nd Road Number) must be completed. On each vehicle record, 2.10 (Junction Location of Vehicle) must be coded 1 - 8.

N. If 1.16 is coded 00, items 1.17, 1.18 and 1.19 must not contain any coded entries and 2.10 must be coded 0 for each vehicle.

O. See also "Examples for coding the locations of accidents and vehicles" on page 23.
1.17 JUNCTION CONTROL

CODES

1. Authorised person
2. Automatic traffic signal
3. Stop sign
4. Give way or uncontrolled

NOTES

A. To be completed for 'junction accidents' only. If item 1.16 (Junction Detail) is coded 00, leave 1.17 blank.

B. An 'authorised person' at a junction means a police officer, traffic warden in uniform or school crossing patrol (see 1.20a - Note C) who is controlling the traffic.

C. If an 'authorised person' is controlling the junction, even if there are traffic signals or other junction controls, code 1 'authorised person' should be entered.

D. Where part time traffic signals are employed, use code 2 if the traffic signals were in operation at the time of the accident, and code 4 if not.

E. On a junction where the traffic signals are out of action and where there is no authorised person in control, this variable should be coded 2, and an appropriate code to indicate the state of the traffic signals will also normally be necessary under item 1.24 (Special Conditions at Site).

F. See also "Examples for coding the locations of accidents and vehicles" on page 23.
1.18 **2nd ROAD CLASS**

**CODES**

1. Motorway
2. A(M)
3. A
4. B
5. C
6. Unclassified

**NOTES**

A. To be completed for 'junction accidents' only.

B. Enter the class, as coded above, of the road at the junction which has not already been coded as 1st Road Class.

C. Where, at a junction, there is more than one road to choose from for this variable (i.e. as the second road), then the road with the highest class should be chosen.

D. It is for individual local processing authorities to decide whether or not to separately identify 'C' roads. Where this is not done, such a road should be coded 6 'Unclassified'.

E. See also "Examples for coding the locations of accidents and vehicles" on page 23.
1.19 2nd ROAD NUMBER

NOTES

A. Enter the road number of the road whose class was entered at 1.18 (2nd Road Class).

B. If the road number contains less than four digits, leading zeros should be inserted to the left of the number (eg. A46 is coded 0046).

C. If 1.18 is coded 5 or 6, the local processing centre will decide whether a road number is used.

D. If 1.18 is coded 1 - 4, 1.19 must contain a valid road number.
1.20a PEDESTRIAN CROSSING - HUMAN CONTROL

CODES

0. None within 50 metres
1. Control by school crossing patrol
2. Control by other authorised person

NOTES

A. This section should be coded for every personal injury accident. If, at the time of the accident, there is no 'Pedestrian crossing with human control' within 50 metres, enter code 0.

Only record the presence of a pedestrian crossing if:

a. a pedestrian is involved in an accident on, or within 50 metres of, a pedestrian crossing, or
b. the pedestrian crossing facility was within 50 metres of the accident, along the route travelled or intended to be travelled, by vehicle(s) involved in the accident, and was considered to be a factor in the accident, regardless of whether there was direct pedestrian involvement.

B. Codes 1 and 2 should be used regardless of whether the human control site had a physical pedestrian crossing facility.

C. School crossing patrol means 'lollipop' men and women in uniform, who are lawfully appointed.

D. An 'Other authorised person' means a police officer or a traffic warden in uniform.

E. 1.20a and 1.20b should always refer to the same site. In the unlikely event of a pedestrian crossing with human control and a physical pedestrian crossing facility being available at different sites within 50 metres of an accident (and both are deemed to have been a factor in the accident), the codes in 1.20a and 1.20b should refer to the site nearest the accident.

F. See also "Examples" on page 32.
1.20b PEDESTRIAN CROSSING - PHYSICAL FACILITIES

CODES

0. No physical crossing facility within 50 metres
1. Zebra crossing
4. Pelican, puffin, toucan or similar non-junction pedestrian light crossing
5. Pedestrian phase at traffic signal junction
7. Footbridge or subway
8. Central refuge - no other controls

NOTES

A. This section should be coded for every personal injury accident. If there was no 'Physical pedestrian crossing facility' within 50 metres of the accident, enter code 0.

Only record the presence of a pedestrian crossing if:

a. a pedestrian is involved in an accident on, or within 50 metres of, a pedestrian crossing, or
b. the pedestrian crossing facility was within 50 metres of the accident, along the route travelled or intended to be travelled, by vehicle(s) involved in the accident, and was considered to be a factor in the accident, regardless of whether there was direct pedestrian involvement.

See also "Examples" on page 32.

B. A zebra crossing should be coded as such even if the beacons or stripes are defective.

C. Code 4 includes any pedestrian crossing which is not at a junction, and has traffic lights controlling the traffic, and lights controlling pedestrians (or pedestrians and cyclists) crossing.

D. 'Pedestrian phase at traffic signal junction' is any pedestrian crossing at a junction controlled by traffic lights which has an indicator light for pedestrians (or pedestrians and cyclists) only. This does not include normal traffic signals with pedestrian stud crossing points but no special indicator lights for pedestrians.

E. Where a junction controlled by traffic lights has pedestrian crossings with indicator lights for pedestrians on one or more arms (or filter lanes), but no similar facilities on the other arms, allocate code 5 or 0 as appropriate to the junction arm at which (or nearest to which) the accident occurred.

F. Where light controls are defective on a light controlled pedestrian crossing, code 4 or 5 should still be used.

G. Code 8 'Central refuge - no other controls' should only be used when the refuge is not part of any other pedestrian crossing facility (this code is not applicable to median strips on dual carriageways).

H. When more than one physical pedestrian crossing facility is present within 50 metres (and both/all are deemed to have been a factor in the accident), the nearest one to the accident should be coded.

I. 1.20a and 1.20b should always refer to the same site. In the unlikely event of a pedestrian crossing with human control and a physical pedestrian crossing facility being available at different sites within 50 metres of an accident (and both are deemed to have been a factor in the accident), the codes in 1.20a and 1.20b should refer to the site nearest the accident.

J. Raised tables/platforms are not to be considered as pedestrian facilities unless they are marked further as Zebra or Pelican Crossing etc.
K. If 1.20b is coded 1, 4, 5 or 8 and 1.16 (Junction Detail) is coded 00, then 1.12 (1st Road Class) must not be coded 1 or 2.

**EXAMPLES**

</table>
1.21 LIGHT CONDITIONS

CODES

1. Daylight: street lights present
2. Daylight: no street lighting
3. Daylight: street lighting unknown
4. Darkness: street lights present and lit
5. Darkness: street lights present but unlit
6. Darkness: no street lighting
7. Darkness: street lighting unknown

NOTES

A. This section should be coded for all personal injury accidents, whether in daylight or darkness.

B. 'Darkness' means half an hour after sunset to half an hour before sunrise. 'Daylight' means all other times.

C. 'Street lights lit' includes instances where alternate lamps are lit. Scattered or isolated lamps which are lit should be treated as 'street lights unlit' (code 5).

D. The distinction between 'street lights unlit' and 'no street lights' is made because it is important in assessing factors affecting accident rates.

E. The use of codes 3 and 7 should be avoided if at all possible.
1.22 WEATHER

CODES

1. Fine without high winds
2. Raining without high winds
3. Snowing without high winds
4. Fine with high winds
5. Raining with high winds
6. Snowing with high winds
7. Fog or mist - if hazard
8. Other
9. Unknown

NOTES

A. This refers to weather conditions at the time and location of the accident.

B. 'Fine without high winds' means any weather condition which does not have an adverse effect on driving (i.e. cannot be coded 2 - 8).

C. 'Raining' includes drizzle, hail and sleet not tending to build up a deposit.

D. 'Snowing' includes sleet building up a deposit.

E. 'Fog' does not include light mists which did not constitute a driving hazard on the road where the accident occurred.

F. The combinations of certain conditions with high winds (codes 4 - 6) should only be coded if the winds are deemed to have adversely affected driving conditions for one or more of the vehicles in the accident. The use of these codes does not imply that the high winds were a cause of the accident.

G. If two or more codes are appropriate, enter the code of the condition which is deemed to have most adversely affected driving conditions.

H. 'Other' should be used to indicate any other adverse weather condition which is not separately specified by the codes above. This code should be avoided if at all possible.
1.23 ROAD SURFACE CONDITION

CODES

1. Dry
2. Wet/Damp
3. Snow
4. Frost/Ice
5. Flood (surface water over 3cm deep)

NOTES

A. This refers to the road surface condition at the time of the accident.
B. Codes 4 and 5 do not necessarily mean that the whole carriageway was covered.
1.24 SPECIAL CONDITIONS AT SITE

CODES

0. None
1. Automatic traffic signal out
2. Automatic traffic signal partially defective
3. Permanent road signing or marking defective or obscured
4. Roadworks
5. Road surface defective
6. Oil or diesel
7. Mud

NOTES

A. This section should be completed for every personal injury accident whether or not such conditions were considered to be contributory to the accident. Use code 0 only if there were no special conditions at the accident site.

B. An automatic traffic signal (including a pelican/puffin/toucan crossing) is 'out' (code 1) if it is totally inoperative at the time of the accident (i.e. no light(s) whatsoever in operation). Do not use this code to record part time signals which are not in operation (unless there is clear evidence that the part time signals are defective).

C. An automatic traffic signal (including a pelican/puffin/toucan crossing) is 'partially defective' when any defect not covered by Code 1 exists. (See Note B above regarding part time traffic signals).

D. If roadworks are present and any of the other conditions are also present, code 4 is preferred if the roadworks were hit by at least one vehicle.

   Includes accidents occurring within the coned area approaching (or immediately following) roadworks.

E. A defective road surface (code 5) includes any obvious road surface defect, such as pot holes, cracks (but not lack of skid resistance) and surface melting, but not the presence of ice, snow or flood.
1.25 CARRIAGEWAY HAZARDS

CODES

0. None
1. Dislodged vehicle load in carriageway
2. Other object in carriageway
3. Involvement with previous accident
6. Pedestrian in carriageway - not injured
7. Any animal in carriageway (except ridden horse)

NOTES

A. To be completed for all personal injury accidents. Use Code 0 only when none of the other codes apply.

B. Codes 1, 2, 3, 6 & 7 are to be used only to indicate an object not expected to be found in the carriageway. They should not be used to record impact with a bollard, refuge, kerb etc., which are permanent features.

C. Code 1 should not be used where a vehicle load has been dislodged as a result of the accident currently being coded.

D. If a dislodged vehicle load is in the carriageway as a result of a previous accident then use code 3.

E. If code 3 and another code apply, enter code 3.

F. Only live animals should be coded under 7. Dead animals (or dead pedestrians) should be coded as 'other objects' (code 2).

'Animal' relates to all animals that may be construed to have been a 'Carriageway Hazard' and not just those animals defined in the road traffic act.
1.26 DID A POLICE OFFICER ATTEND THE SCENE AND OBTAIN THE DETAILS FOR THIS REPORT?

CODES

1. Yes
2. No

NOTES

A. Code 1 should be used where a police officer attended the scene of the accident and obtained the details for this report. It is not necessary for the reporting officer to have witnessed the actual accident for code 1 to be used.

B. Code 2 should be used in all other cases (eg. accident reported "over the counter" at a police station).
1.27 DfT SPECIAL PROJECTS

NOTES

A. Use of this variable will be explained by DfT as and when mutually agreed.

B. When no special project is under way, the box should be left blank, since irrelevant entries are confusing when a DfT special project is in progress in selected areas.
ANNEX 2 - VEHICLE VARIABLES

2.1 RECORD TYPE

CODES

21. New vehicle record
25. Amended vehicle record

NOTES

A. First box always coded 2 to enable vehicle records to be easily identified during computer processing and analysis at local and national levels.

B. In second box, code 5 only to be used when a vehicle record already sent to DfT/SE/NAfW is to be replaced by an amended record.
2.2 POLICE FORCE

NOTE

Repeat of Police Force code entered on the attendant circumstances record at item 1.2.
2.3 ACCIDENT REFERENCE

NOTE

Repeat of Accident Reference on the attendant circumstances record at item 1.3.
2.4 VEHICLE REFERENCE NUMBER

NOTES

A. The first vehicle coded should be numbered 001 and any subsequent vehicles should be numbered in sequence.

B. No two vehicles in an accident should have the same vehicle reference number.
### 2.5 TYPE OF VEHICLE

#### CODES

- **01.** Pedal cycle
- **02.** Motorcycle 50cc and under
- **03.** Motorcycle over 50cc and up to 125cc
- **04.** Motorcycle over 125cc and up to 500cc
- **05.** Motorcycle over 500cc
- **08.** Taxi/Private hire car
- **09.** Car
- **10.** Minibus (8 - 16 passenger seats)
- **11.** Bus or coach (17 or more passenger seats)
- **14.** Other motor vehicle
- **15.** Other non-motor vehicle
- **16.** Ridden horse
- **17.** Agricultural vehicle (includes diggers etc.)
- **18.** Tram/Light rail
- **19.** Goods vehicle 3.5 tonnes maximum gross weight (mgw) and under
- **20.** Goods vehicle over 3.5 tonnes and under 7.5 tonnes mgw
- **21.** Goods vehicle 7.5 tonnes mgw and over

#### NOTES

A. Vehicles (other than cars or minibuses used as taxis or private hire vehicles) should be coded according to their construction and not according to their use at the time of the accident. For example, a van which is being used for the carriage of passengers should nevertheless be coded as a goods vehicle. Vehicles of the armed forces should be recorded under the heading appropriate to a civilian vehicle of the same type if there is one, otherwise they should be coded as 'Other motor vehicle' or 'Other non-motor vehicle'.

B. Pedal cycles: this code applies to pedal cycles being ridden in the carriageway or on a cycleway or pavement and also applies to toy cars and toy tricycles in the carriageway. Toy cars and toy tricycles on the footpath should be ignored and their riders classified as pedestrians. Includes electrically assisted pedal cycles defined in the Electrically Assisted Pedal Cycles Regulations 1983 No 1168.

C. The coding for motorcycle (codes 02-05) now depends entirely on engine size. Motorcycle includes mopeds, motor scooters, motorcycle combinations and three wheeled motorcycles. "Quad bikes" and "motorised scooters" should be coded 14.

D. "Taxi" includes any vehicle operating as a hackney carriage, regardless of construction, and bearing the appropriate district council or local authority hackney carriage plates.

Vehicles operating as private hire cars (i.e. 'minicabs') may or may not bear private hire plates, but are to be coded 08 in either case.

E. Car: includes three wheeled cars, estate cars, family vans/multi-people carriers, Land Rovers and similar four-wheel drive vehicles.

F. Minibus: includes minibus, micro-bus, post buses and Dial-a-Bus. Minibuses equipped to carry less than 17 seated passengers should be coded 10, even if used as buses.

Minibuses equipped to carry 17 or more seated passengers should be coded 11.

G. Bus or coach: This category is to be determined by the construction of the vehicle rather than its use. All buses or coaches equipped to carry 17 or more seated passengers should be coded 11, regardless of whether or not being used in stage operation.
H. Agricultural vehicles (includes diggers etc.): This category will mainly include agricultural tractors (whether or not towing), mobile excavators and front dumpers. Goods vehicles used to transport agricultural produce or livestock should be coded 19, 20 or 21 as appropriate. Heavy plant such as large mobile cranes should be coded 14 'Other motor vehicle'.

I. Goods vehicles (codes 19, 20 and 21) include three-wheeled goods vehicles (provided they are not controlled by a pedestrian), tankers, HGV tractors travelling without their semi-trailers, trailers, and articulated vehicles as defined in item 2.6, but excluding caravans and 'other tows' which are not goods vehicles.

Code 19 applies to vans (including car based vans) or small goods vehicles (including pick-up trucks) which are licensed for Private and Light Goods use (PLG). Code 19 should be used for vehicles up to 3.5 tonnes maximum gross weight.

Codes 20 and 21 apply to larger vehicles licensed as over 3.5 tonnes maximum gross weight. This information can normally be determined from the 'taxable weight' on the heavy goods vehicle tax disk. If not on the tax disk the gross vehicle weight will normally be shown on a DfT plate. This is situated in the cab of a rigid or an articulated vehicle and on the nearside of the chassis of a drawbar trailer.

Use the 'maximum gross weight' or 'train weight' to determine this code. Do not use 'towing unit gross weight' or 'manufacturer's design weight.' Note that certain classes of large vehicles do not require plating tests and may not display weight on the tax disk.

J. Other motor vehicles are types of motor vehicle not falling into any of the main categories. Examples are ambulances, fire engines, motor caravans, electric scooters (powerchairs) and motorised wheelchairs, quad bikes, motorised scooters, pedestrian controlled vehicles with a motor, refuse vehicles, road rollers, mobile cranes, tower wagons and army tanks.

K. Other non-motor vehicles are miscellaneous types of vehicles without a motor, other than pedal cycles. Examples are vehicles drawn by an animal, invalid carriages that are self propelled without a motor, and pedestrian controlled vehicles without a motor which are normally used on the road (eg. street barrows). Vehicles which are normally on the pavement, such as prams, should not be recorded as vehicles nor should led horses. Toy cars and toy tricycles on the pavement should not be recorded, their riders being classified as pedestrians.

Unattached, stationary caravans are not vehicles and they should be coded under Section 1.25 (Carriageway Hazards).

Some further guidance is contained in the notes of item 3.6 (Casualty Class) on page 71.

L. Codes 01 - 09 should be prefixed with a zero (eg. 'Car' should be coded 09).

M. The local processing authority should query any vehicle type coded 01, 02, 15, 16, 17 or 18 if 1.12 (1st Road Class) is coded 1 or 2.
2.6 TOWING AND ARTICULATION

CODES

0. No tow or articulation
1. Articulated vehicle
2. Double or multiple trailer
3. Caravan
4. Single trailer
5. Other tow

NOTES

A. An articulated vehicle is a tractor with a semi-trailer so constructed that a significant part of the weight of the semi-trailer is borne by the tractor. It does not include a tractor without its semi-trailer, which should be coded 0, nor a combination made up of a rigid vehicle and a drawbar trailer, which should be coded 4. A drawbar trailer has at least 2 axles, the front axle of which is steered by the drawbar connecting it to the drawing vehicle.

Articulated (bendy) buses should be coded 1.

B. A double/multiple trailer should be taken to mean two or more trailers.

C. A caravan means a two-wheeled or four-wheeled trailer designed for accommodation, or as a mobile office etc.

D. Single trailer is any rigid vehicle towing a drawbar trailer or trailer with fixed axle(s), other than a caravan, via a rigid bar.

E. Mobile compressors, other heavy plant and equipment, fairground and circus equipment are each to be regarded as single trailers - coded 2 or 4 if applicable.

F. Other tow is any other towing arrangement not defined in codes 0 - 4 and includes vehicles towing by rope, and breakdown trucks towing another vehicle by crane-mounted tow or a towing bar but it specifically excludes any drawbar trailer.

G. If 2.6 is coded 1 or 2, then 2.5 (Type of Vehicle) should be coded 11, 14, 18, 20 or 21.
2.7 MANOEUVRES

CODES

01. Reversing
02. Parked
03. Waiting to go ahead but held up
04. Slowing or stopping
05. Moving off
06. U turn
07. Turning left
08. Waiting to turn left
09. Turning right
10. Waiting to turn right
11. Changing lane to left
12. Changing lane to right
13. Overtaking moving vehicle on its offside
14. Overtaking stationary vehicle on its offside
15. Overtaking on nearside
16. Going ahead left hand bend
17. Going ahead right hand bend
18. Going ahead other

NOTES

A. This refers to actions immediately before the accident.
B. A vehicle in the process of parking should be coded 01 or 04 as appropriate, not 02.
C. A bus/coach stationary at a bus stop should be coded as 'Parked', code 02.
D. A vehicle moving across the road to park on the offside should be coded 12, even if lanes are not marked.

Code 12 also includes vehicles merging from a slip road.
E. Code 14 should include where:
   i. the vehicle being overtaken on the offside is temporarily held up;
   ii. a parked vehicle is being overtaken on the offside and a vehicle record has been produced for that parked vehicle (i.e. the parked vehicle is deemed to have been contributory to the accident).
F. Code 15 should be used where the vehicle being overtaken is parked (see Note E(ii) above), broken down, temporarily held up or moving.
G. Codes 01 - 09 should be prefixed with a zero (eg. 'Moving off' should be coded 05).
H. See also "Examples for coding the locations of accidents and vehicles" on page 23.
2.8 VEHICLE MOVEMENT COMPASS POINT

<table>
<thead>
<tr>
<th>From</th>
<th>To</th>
</tr>
</thead>
</table>

CODES

1. North
2. North east
3. East
4. South east
5. South
6. South west
7. West
8. North west
00. Parked

NOTES

A. These codes should reflect true compass directions.
B. The 'from' box gives the direction from which the vehicle had come prior to the accident.
C. The 'to' box gives the intended direction of the vehicle had there not been an accident.
D. U turns: these are coded with the same code 'from' and 'to' (eg. a vehicle travelling from north and making a U turn will be coded 11.
E. Stationary vehicles waiting to turn, or to go ahead, should be coded as if they were moving vehicles.
F. Roundabouts: code both directions as if no roundabout were present (i.e. as if going straight ahead or turning, or intending to turn, left or right).
2.9 VEHICLE LOCATION AT TIME OF ACCIDENT - RESTRICTED LANE / AWAY FROM MAIN CARRIAGEWAY

CODES

00. On main carriageway - not in restricted lane
01. Tram/Light rail track
02. Bus lane
03. Busway (including guided busway)
04. Cycle lane (on main carriageway)
05. Cycleway or shared use footway (not part of main carriageway)
06. On lay-by or hard shoulder
07. Entering lay-by or hard shoulder
08. Leaving lay-by or hard shoulder
09. Footway (pavement)

NOTES

A. Tram/Light rail track: Accidents occurring on tram/light rail track, where track forms part of the highway. This includes sections where the track forms part of the highway, but is segregated from the main carriageway for tram use only.

Accident does not necessarily have to involve tram or light rail vehicle.

B. Bus lane: Lane marked off within main carriageway for use by buses (and possibly other permitted vehicles such as taxis and pedal cycles). Code 02 should be used even if lane restriction was not in force at the time of the accident.

C. Busway: Section of highway segregated from main carriageway, for use by buses (including guided buses), and possibly other permitted vehicles such as taxis and pedal cycles.

D. Cycle lane: Lane (advisory or mandatory) marked off within main carriageway for use by pedal cycles only.

E. Cycleway: Forms part of the highway (road in Scotland) but is not part of the main carriageway. Includes shared use on footway (pavement) whether or not separated by white line.

F. Footway (pavement): Footway, for use by pedestrians only, which forms part of the highway but is separated from the main carriageway. Includes grass verges.

G. Other restricted lanes within the main carriageway, not listed above, (eg. for high occupancy vehicles or goods vehicles) should be coded 02.

H. Vehicles involved in accidents on the hard shoulder when it is being used as a running lane, should be coded 00.

I. If code 07 or 08 is used (Leaving or Entering lay-by or hard shoulder) then 2.7 (Manoeuvres) for this vehicle should not be coded 08 or 10 ('Waiting to turn left or right').

J. If 1.12 (1st Road Class) is coded 1 or 2 then 2.9 must be coded 00, 02 or 05 - 09.
2.10 JUNCTION LOCATION OF VEHICLE

CODES

0. Not at, or within 20 metres of, junction
1. Approaching junction or waiting/parked at junction approach
2. Cleared junction or waiting/parked at junction exit
3. Leaving roundabout
4. Entering roundabout
5. Leaving main road
6. Entering main road
7. Entering from slip road
8. Mid junction - on roundabout or on main road

NOTES

A. Codes 1 and 2 include vehicles waiting in a queue. Use code 0 if accident occurs in queue more than 20 metres from junction.
B. Code 3 includes late lane changes immediately prior to leaving roundabout.
C. Codes 4 and 6 only apply to vehicles attempting to enter the circulatory part of the roundabout or the main road. Code 1 should be used for vehicles waiting to enter the roundabout/main road.
D. Code 5 includes vehicles leaving the main road on to a slip road.
E. Mid junction (code 8) is defined as the area contained within the junction markings (e.g. stop line/give way lines etc.). Where there are no markings, the middle of a junction is the area contained by extending kerb lines across the mouth of the roads meeting at the junction.
F. Code 8 includes vehicles in the middle of the junction which are waiting to leave the main road (e.g. waiting to turn right).
G. If 1.16 (Junction Detail) is coded 01 - 09, then 2.10 must be coded 1 - 8. If 1.16 is coded 00, 2.10 must be coded 0.
H. See also "Examples for coding the locations of accidents and vehicles" on page 23.
2.11 SKIDDING AND OVERTURNING

CODES

0. No skidding, jack-knifing or overturning
1. Skidded
2. Skidded and overturned
3. Jack-knifed
4. Jack-knifed and overturned
5. Overturned

NOTES

A. 'Jack-knifed' should be entered in preference to 'skidded' when both apply.
B. 'Skidded' or 'Jack-knifed' should be entered, where appropriate, irrespective of whether it is considered to have been a cause or a result of the accident.
C. A vehicle which, as a result of the accident, was at any time on its roof, side, front or rear should be recorded as having overturned, even though it may have come to rest on its wheels. Two-wheeled motor vehicles and pedal cycles should only be coded 0 or 1. Such a vehicle is not regarded as 'overturned' when lying on its side.
D. If 2.11 is coded 3 or 4, variable 2.6 (Towing and Articulation) must be coded 1 - 5 for that vehicle.
2.12 HIT OBJECT IN CARRIAGEWAY

CODES

00. None
01. Previous accident
02. Roadworks
04. Parked vehicle
05. Bridge - roof
06. Bridge - side
07. Bollard/Refuge
08. Open door of vehicle
09. Central island of roundabout
10. Kerb
11. Other object
12. Any animal (except ridden horse)

NOTES

A. If more than one of the items above are hit, the code selected should be the one which the vehicle hit first.

B. Kerb includes build out within traffic calming schemes. Road humps, speed cushions and similar traffic calming features should not be recorded under 2.12.

C. Code 11 includes pedestrians which were dead before they were hit, but otherwise excludes pedestrians or anything recorded elsewhere as a vehicle.

D. Code 12 excludes animals pulling vehicles (eg. horse and trap).

'Animal' relates to all animals that may be construed to have been a 'Carriageway Hazard' and not just those animals defined in the road traffic act.

E. If 2.12 is coded 11, item 1.25 (Carriageway Hazards) must not be coded 0.

F. If any vehicle runs into vehicle(s) which were involved in a previous accident, use code 01.

If a vehicle runs into debris associated with a previous accident or takes avoiding action and hits another object in the carriageway, code 02 - 12 as appropriate, and use code 3 for variable 1.25.

If 2.12 is coded 01, 1.25 must be coded 3.

G. If any vehicle is involved with roadworks (Code 02) then 1.24 (Special Conditions at Site) should be coded 4.

H. Codes 1 - 9 should be prefixed with a zero (eg. 'Roadworks' Code 02).
2.13 VEHICLE LEAVING CARRIAGEWAY

CODES

0. Did not leave carriageway
1. Left carriageway nearside
2. Left carriageway nearside and rebounded
3. Left carriageway straight ahead at junction
4. Left carriageway offside onto central reservation
5. Left carriageway offside onto central reservation and rebounded
6. Left carriageway offside and crossed central reservation
7. Left carriageway offside
8. Left carriageway offside and rebounded

NOTES

A. If a vehicle leaves the carriageway more than once, record the first occurrence.
B. Enter Code 0 if any vehicle hit the kerb and rebounded.
C. Code 3 applies to 'T' or staggered junctions where a vehicle on the minor road crossed the main road and left the carriageway opposite its approach road.
D. Codes 7 and 8 should not be used for dual carriageways.
E. A vehicle is 'Leaving the carriageway' when the vehicle reaches (temporarily or permanently) a position such that one or more of its wheels are on (or beyond) the limit of the carriageway in which it was originally travelling. This includes entering a separated busway or cycleway but not simply crossing a white line to enter a bus or cycle lane.
F. The hard shoulder should be treated as part of the carriageway.
G. Footways are not part of the carriageway (eg. a vehicle leaving the carriageway nearside on to the footway should be coded 1).
H. Hitting the centre of a roundabout constitutes having left carriageway offside and should be coded 7 or 8 as appropriate.
I. If a vehicle hits a central reservation (code 4, 5 or 6), then 1.14 (Road Type) must be coded 3 'Dual carriageway'.
J. Rebounded (Codes 2, 5 and 8) means returned after hitting something (eg. the central reservation, road furniture, parked vehicles etc). If this item is coded 2, 5 or 8 then 2.14 must refer to what the vehicle hit initially and cannot, therefore, be coded 00, 08 or 09.
K. Pedal cycles away from the carriageway (eg. on cycleway or shared use footway) should be coded 0 in all cases.
2.14 FIRST OBJECT HIT OFF CARRIAGEWAY

CODES

00. None
01. Road sign/Traffic signal
02. Lamp post
03. Telegraph pole/Electricity pole
04. Tree
05. Bus stop/Bus shelter
06. Central crash barrier
07. Nearside or offside crash barrier
08. Submerged in water (completely)
09. Entered ditch
10. Other permanent object

NOTES

A. If more than one of the items above are hit, the code selected should be the one the vehicle hit first.
B. If pedestrian railings or grass or other bank are hit, then Code 10 should be used.
C. If any vehicle is involved with a bus stop (Code 05), item 1.12 (1st Road Class) cannot be 'Motorway' (code 1 or 2).
D. If any vehicle is involved with a central crash barrier (Code 06) then 1.14 (Road Type) should be coded 3 'Dual carriageway'.
E. Codes 0 - 9 should be prefixed with a zero (eg. 'Lamp post' Code 02).
2.16 FIRST POINT OF IMPACT

CODES

0. Did not impact
1. Front
2. Back
3. Offside
4. Nearside

NOTES

A. This should be the first point to come into contact with another vehicle, pedestrian or other object. Damage to the vehicle need not have occurred.

B. If a vehicle stops suddenly to avoid another vehicle/pedestrian/object in road, but there is no impact, then enter code 0.
2.17 FIRST CONTACT BETWEEN EACH VEHICLE

NOTES

A. Enter the Vehicle Reference Number (Item 2.4) of the first vehicle with which the vehicle being coded collided.

For example, in a 3 vehicle collision, where Veh 001 collides with the rear of Veh 002, pushing it into the rear of Veh 003, the following coding would apply:

<table>
<thead>
<tr>
<th>Vehicle</th>
<th>Code</th>
</tr>
</thead>
<tbody>
<tr>
<td>Veh 001</td>
<td>0 0 2</td>
</tr>
<tr>
<td>Veh 002</td>
<td>0 0 1</td>
</tr>
<tr>
<td>Veh 003</td>
<td>0 0 2</td>
</tr>
</tbody>
</table>

B. This field should be completed whenever there has been a collision between two or more vehicles, even if some other object has been hit first. For example, where vehicle 001 hits lamp post and rebounds on to vehicle 002, then vehicle 001 should have 002 coded in 2.17, and vehicle 002 should have vehicle 001 coded in 2.17 (assuming no other vehicle was involved).

C. If no other vehicle is hit, code 000.

D. If a pedestrian (and no other vehicle) is hit, code 000.

E. 'Contact, Collided or Hit' should all be interpreted as 'hit or hit by'.

F. Use code 000 for vehicles hit by moving unattached trailers.
2.21 SEX OF DRIVER

CODES

1. Male
2. Female
3. Not traced

NOTES

A. Code 3 'Not traced' should be used in the case of a 'hit and run' driver, or where the police are unable to trace the driver of the vehicle. However, where this information becomes available later (eg. where a 'hit and run' driver is pursued and caught), it should be entered.

B. If a driver is injured, then the sex entered here must be repeated in item 3.7 (Sex of Casualty) for the driver casualty record for this vehicle.
2.22 AGE OF DRIVER

NOTES

A. Where an exact age at last birthday is not known, enter an estimate.

B. Enter age in years, ignoring additional months. Unused spaces to the left of the age should be coded 0 (e.g. for child cyclist aged 9 years 11 months, enter 09).

C. Leave blank if it is not possible to make a reasonable estimate. Do not enter 00 or 99 to indicate ‘not known’.

D. A driver aged 100+ should be coded 99.

E. This data should be entered even if the driver is not injured.

F. A blank is acceptable if the driver was ‘hit and run’, or if the vehicle was parked and unattended. However, where this information becomes available later (e.g. where a ‘hit and run’ driver is pursued and caught), it should be entered.

G. If a driver is injured, then the age entered here must be repeated in item 3.8 (Age of Casualty) for the driver casualty record for this vehicle.

H. If 2.5 (Vehicle Type) is coded 02 - 05, 08 - 11, 14, 17 - 21, then the local processing authority should query the driver age if this is under 16.
2.23 BREATH TEST

CODES

0. Not applicable
1. Positive
2. Negative
3. Not requested
4. Refused to provide
5. Driver not contacted at time of accident
6. Not provided (medical reasons)

NOTES

A. This item refers to breath tests required under sections 6(1) or 6(2) of the Road Traffic Act 1988, but not to those required under section 7 of the Act, from persons arrested under sections 6(5) or section 4(6) of the Act. If the breath test required under sections 6(1) or 6(2) is positive, it should be so reported irrespective of whether a possible second breath test under section 7 or a blood or urine test confirms or contradicts the results of the first breath test.

B. 'Not applicable' should only be used to cover pedal cyclists and other non-motor vehicle drivers to whom the legislation does not apply (i.e. any conditions not referred to in Sections 6(1) or 6(2) of the Road Traffic Act 1988).

C. 'Not requested' should be used where it was decided not to require a breath test.

D. 'Refused to provide' should be used where a driver refuses a breath test, irrespective of whether prosecution follows or not.

E. 'Not contacted' should be used when a driver, from whom a test may be required, absents himself from the scene of the accident, or where the police do not attend the accident scene. Also includes vehicles which are parked and unattended.

F. 'Not provided (medical reasons)' includes cases in which a hospital doctor or paramedic objected to the breath test and cases in which injury (including death) or circumstances rendered a breath test impracticable. Where code 6 and code 0 both apply, use code 0.

G. If 2.5 (Vehicle Type) is coded 02 - 05, 08 - 11, 14, 17 or 19 - 21, then 2.23 must not be coded 0.
2.24 HIT AND RUN

CODES

0. Other
1. Hit and run
2. Non-stop vehicle, not hit

NOTES

A. 'Other' is to be coded when a vehicle, whether in, or contributing to the accident, stops at the scene of the accident and vehicle/driver data is obtainable.

B. Where 'Hit and run' is used, it is likely that most information about the vehicle and its driver will be unknown. However, where this information becomes available later (eg. where a 'hit and run driver' is pursued and caught), it should be entered in the appropriate boxes elsewhere on STATS19.

C. 'Non-stop vehicle, not hit' includes those cases where a vehicle was involved in, or contributory to, an accident, but did not or was not hit, and then left the scene of the accident so that little information is known for either the vehicle or its driver. Such a vehicle cannot be described as a 'hit and run' as the driver may be unaware of the accident.
NOTES

A. Use of this variable will be explained by DfT as and when mutually agreed.

B. When no special project is under way, the box should be left blank, since irrelevant entries are confusing when a DfT special project is in progress in selected areas.
2.26 VEHICLE REGISTRATION MARK

NOTES

A. The Vehicle Registration Mark (VRM) of all motor vehicles involved in a personal injury accident should be reported with the following exceptions:
   i. foreign or diplomatic vehicles;
   ii. military vehicles;
   iii. vehicles displaying trade plates.

B. For the vehicles listed in Note A above and for vehicles for which the registration is unknown or for which a registration mark is not required, the boxes should be left blank.

C. Blank spaces in the middle of a VRM containing less than seven characters, should be removed.

D. Where the VRM is less than seven characters long, it should be left justified, and the remaining boxes left blank.

EXAMPLE:  A 1 2 B C D
2.27 DRIVER HOME POSTCODE

DRIVER HOME POSTCODE or one of the following CODES

1. Unknown
2. Non-UK resident
3. Parked and unattended

NOTES

A. Complete as far as possible if full postcode not known.

EXAMPLE: A B 1 

B. Left justify first four boxes.

EXAMPLE: A 1 2 C D

C. Special codes to be inserted in left hand box.

EXAMPLE: 3

D. If the postcode is not immediately available, leave blank.

E. Students living away from home should give the postcode for their temporary address during term time and for their permanent address at all other times.
2.28 FOREIGN REGISTERED VEHICLE

CODES

0. Not a foreign registered vehicle
1. Foreign registered vehicle - left hand drive
2. Foreign registered vehicle - right hand drive
3. Foreign registered vehicle - two wheeler

NOTES

A. Codes 1 - 3 should be used for all vehicles bearing non-UK registration plates, including vehicles from the Republic of Ireland, the Isle of Man and the Channel Islands.

B. Foreign non-motor vehicles (eg. bicycles) should be coded 0.

C. Left hand drive UK registered vehicles should be coded 0.

D. Vehicles which are not traced (eg. Hit and Run) should be coded 0.
2.29 JOURNEY PURPOSE OF DRIVER/RIDER

CODES

1. Journey as part of work
2. Commuting to/from work
3. Taking pupil to/from school
4. Pupil riding to/from school
5. Other/Not known

NOTES

A. Include under codes 3 and 4 only journeys in which school pupils up to and including 16 years of age are travelling, or being taken, to or from school. Enter code 5 in all other cases. Pre-school playgroups should be regarded as schools for this purpose.

B. Where a journey has more than one purpose, enter the code relevant to the journey purpose at the time at which the accident occurred. For example, the journey purpose in an accident involving a parent travelling to work and taking a child to school should be coded 3 if the child is in or leaving the vehicle when the accident occurs, but should be coded 2 if the accident occurs after the child has alighted from the vehicle.

C. A driver/rider involved in an accident whilst travelling to school to collect a pupil, or returning home after having taken a pupil to school, should be coded 3, if this is the only purpose for the journey.

D. Enter code 1 for bus or taxi drivers transporting children to/from school.

E. Enter code 5 for all journeys other than those relating to work or to taking children to/from school.

F. If the driver/rider is not available to be asked then the journey purpose should be coded 5.

G. A commuting journey to be coded 2 is the journey made to get to work at the beginning of each working day or shift, or the journey made after work to get home from work.

H. Codes 3 and 4 include journeys to/from pre-school or after-school activities based at the school but exclude journeys made to/from school activities which are not based at the school itself. Journeys between school and childcare organisation/childminder are included, but journeys between childcare and the pupil’s home are not.
### ANNEX 3 - CASUALTY VARIABLES

#### 3.1 RECORD TYPE

<table>
<thead>
<tr>
<th>CODES</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>31.</td>
<td>New casualty record</td>
</tr>
<tr>
<td>35.</td>
<td>Amended casualty record</td>
</tr>
</tbody>
</table>

**NOTES**

A. First box always coded 3 to enable casualty records to be easily identified during computer processing and analysis at local and national levels.

B. In second box, code 5 only to be used when a casualty record already sent to DfT/SE/NAfW is to be replaced by an amended record.
3.2 POLICE FORCE

NOTE

Repeat of Police Force code entered on the attendant circumstances record at item 1.2.
3.3 ACCIDENT REFERENCE

NOTE

Repeat of Accident Reference on the attendant circumstances record at item 1.3.
3.4 VEHICLE REFERENCE NUMBER

NOTES

A. Repeat of vehicle reference number on the associated vehicle record at item 2.4.

B. A casualty record for a vehicle occupant should quote the vehicle reference number of the vehicle which the casualty occupied.

C. A pedestrian casualty record should quote the vehicle reference number of the vehicle by which the pedestrian was first hit.
3.5 CASUALTY REFERENCE NUMBER

NOTES

A. The first casualty coded should be numbered 001 and the subsequent casualties should be numbered in sequence.

B. No two casualties in an accident should have the same vehicle and casualty reference numbers.
3.6 **CASUALTY CLASS**

**CODES**

1. Driver or rider  
2. Vehicle or pillion passenger  
3. Pedestrian

**NOTES**

A. Code 1 includes a person riding a toy cycle, tricycle or pedal car on the carriageway, and the rider of a tandem bicycle who is controlling the machine. Code 1 also includes the riders of micro scooters with petrol engines or electric motors.

A person who, having been in control of a vehicle, falls from it (or is injured in the course of dismounting from it), should be recorded as 'Driver or rider' of that vehicle.

B. Code 2 includes any occupant of a tandem bicycle who is not controlling the machine, and passengers on combination machines whether occupying sidecar or pillion. Persons riding on the roof, boot or bonnet of a vehicle and persons injured in the course of alighting or dismounting from a vehicle, should also be coded 2. Code 2 also includes a child who releases a vehicle's hand brake.

C. Code 3 includes:

i. person on a toy scooter, roller skates or skateboard;  
ii. person riding a toy cycle, tricycle or pedal car on the footpath;  
iii. person wheeling or holding a bicycle (whether on footpath or road);  
iv. person pushing or pulling a vehicle or operating a pedestrian controlled vehicle;  
v. person leading or herding animals;  
vi. occupant of a pram or pushchair;  
vii. a driver or passenger who has alighted safely from a vehicle and then sustains injury in an accident, whether injured by his own or some other vehicle;  
viii. person other than a cyclist holding on to the back of a vehicle (eg. on roller skates);  
ix. a person involved in an accident **after safely alighting from** a bus/coach and who is injured by some other vehicle (which would then be recorded as the vehicle involved).  
x. a person injured away from the highway (eg. in house or garden) by a vehicle which has lost control on the highway.

D. A pedal cyclist riding across a pedestrian (or toucan) crossing should be coded 1.

E. If 3.6 is coded 3, then 3.10 (Pedestrian Location) must be coded 01 - 10, 3.11 (Pedestrian Movement) must be coded 1 - 9, and 3.12 (Pedestrian Direction) must be coded 0 - 9.
3.7 SEX OF CASUALTY

CODES

1. Male
2. Female

NOTE

If the casualty is a driver, then the sex entered here must be the same as that in item 2.21 (Sex of Driver) for the driver.
3.8 AGE OF CASUALTY

NOTES

A. Where an exact age at last birthday is not known, enter a reasonable estimate.

If no estimate is made it will not be possible to classify the casualty as even child or adult. Thus every effort should be made to estimate an age.

B. Enter age in years, ignoring additional months (eg. an 11 month old baby is 00 years).

C. Unused spaces to the left of the age should be coded 0 (eg. for a child casualty aged 9 years, enter 09).

D. Leave blank if it is not possible to make a reasonable estimate. Do not enter 00 or 99 to indicate ‘not known’.

E. A casualty aged 100+ should be coded 99.

F. If the casualty is a driver, then the age entered here must be the same as that in item 2.22 (Age of Driver) for the driver.
3.9 SEVERITY OF CASUALTY

CODES

1. Fatal
2. Serious
3. Slight

NOTES

A. 'Fatal' injury includes only those cases where death occurs in less than 30 days as a result of the accident. 'Fatal' does not include death from natural causes or suicide (see Section 4.1 on Page 9).

B. Examples of 'Serious' injury are:

Fracture
Internal injury
Severe cuts
Crushing
Burns (excluding friction burns)
Concussion
Severe general shock requiring hospital treatment
Detention in hospital as an in-patient, either immediately or later
Injuries to casualties who die 30 or more days after the accident from injuries sustained in that accident.

C. Examples of 'Slight' injury are:

Sprains, not necessarily requiring medical treatment
Neck whiplash injury
Bruises
Slight cuts
Slight shock requiring roadside attention.

(Persons who are merely shaken and who have no other injury should not be included unless they receive or appear to need medical treatment).

D. The procedure for notifying changes in the severity of a casualty is described in STATS21.
3.10 PEDESTRIAN LOCATION

CODES

01. In carriageway, crossing on pedestrian crossing facility
02. In carriageway, crossing within zig-zag lines at crossing approach
03. In carriageway, crossing within zig-zag lines at crossing exit
04. In carriageway, crossing elsewhere within 50 metres of pedestrian crossing
05. In carriageway, crossing elsewhere
06. On footway or verge
07. On refuge, central island or central reservation
08. In centre of carriageway, not on refuge, central island or central reservation
09. In carriageway, not crossing
10. Unknown or other

NOTES

A. If the casualty was not a pedestrian, leave these boxes blank.
B. Codes 02 and 03 are only applicable to zebra and pelican/puffin/toucan crossings.
C. A 'pedestrian crossing the road' is defined as one wholly or partly on the carriageway who has the intention to cross from one footway to another, or to a central reservation or refuge.
D. If there is conflict between codes 05 and 08, enter code 05.
E. If 3.10 is coded 01 or 04, then either 1.20a (Pedestrian Crossing - Human Control) must be coded 1 or 2, or 1.20b (Pedestrian Crossing - Physical Facilities) must be coded 1, 4, 5, 7, 8 or 9.
   If 3.10 is coded 02 or 03 then 1.20b must be coded 1 or 4.
F. If 3.10 is left blank, then 3.6 (Casualty Class) must be coded 1 or 2.
G. Codes 1 - 9 should be prefixed with zero (eg. 'In carriageway, crossing elsewhere' code 05).
3.11 PEDESTRIAN MOVEMENT

CODES

1. Crossing from driver's nearside
2. Crossing from driver's nearside - masked by parked or stationary vehicle
3. Crossing from driver's offside
4. Crossing from driver's offside - masked by parked or stationary vehicle
5. In carriageway, stationary - not crossing (standing or playing)
6. In carriageway, stationary - not crossing (standing or playing), masked by parked or stationary vehicle
7. Walking along in carriageway - facing traffic
8. Walking along in carriageway - back to traffic
9. Unknown or other

NOTES

A. If the casualty was not a pedestrian, leave this box blank.
B. In codes 1 - 4 'driver' means driver of vehicle which injured the pedestrian. Where a pedestrian was struck by more than one vehicle, this should be the driver of the first vehicle.
C. In codes 5 and 6, include person lying in the carriageway, (eg. drunk) and people who were not moving in any clearly defined manner immediately prior to the accident.
D. Where 3.10 (Pedestrian Location) is coded 06 'On footway or verge', or where the pedestrian is not in the carriageway, 3.11 should be coded 9 'Unknown or other'.
E. If 3.11 is left blank, then 3.6 (Casualty Class) must be coded 1 or 2.
F. If 3.11 is coded 1 - 4, then 3.10 (Pedestrian Location) should not be coded 06 or 09.
G. If 3.11 is coded 5 - 8, then 3.10 should not be coded 01 - 05.
### 3.12 PEDESTRIAN DIRECTION

**COMPASS POINT BOUND**

**CODES**

0. Standing still
1. North
2. North east
3. East
4. South east
5. South
6. South west
7. West
8. North west
9. Unknown

**NOTES**

A. If the casualty was not a pedestrian, leave this box blank.

B. The actual, or intended, direction of travel of the pedestrian should be coded using one of the above codes, or the nearest approximation, where the direction of travel did not fall exactly on one of the given directions.

C. A rough sketch plan of the accident scene is recommended, followed by checking on a suitable map to verify directions. Using the general direction of a road will not be appropriate in most cases.

D. Code 9 should be avoided if at all possible.

E. If 3.12 is left blank, then 3.6 (Casualty Class) must be coded 1 or 2.
3.13 SCHOOL PUPIL CASUALTY

CODES

1. School pupil on a journey to or from school
0. Other

NOTES

A. Include under Code 1 only school pupils up to and including 16 years of age. Enter code 0 in all other cases.
B. Pre-school playgroups should be classified as schools for this purpose.
C. Children up to 16 years of age, not on a journey to or from school should be coded 0.
D. 'Journey to from school' includes journeys to/from pre-school or after-school activities based at the school but excludes journeys made to/from school activities which are not based at the school itself.
E. Journeys between school and childcare organisation/childminder are included, but journeys between childcare and the pupil's home are not.
3.15 CAR PASSENGER

CODES

0. Not a car passenger
1. Front seat passenger
2. Rear seat passenger

NOTES

A. This is intended to be used only in respect of car and taxi/private hire passenger casualties to show whether they were in a front or rear seat. The code to be entered is to be related to the seat which the casualty occupied immediately prior to the accident.

B. Car drivers should be coded 0.

C. Car, includes all vehicles within codes 08 and 09 of 2.5 (Type of Vehicle).

D. Casualties who were riding on the outside of the vehicle should be coded as front seat passengers.

E. Casualties in the middle row of family vans/multi-people carriers should be coded 2. This also applies to passengers in minibuses which are used as taxis or private hire vehicles.

F. If variable 2.5 (Type of Vehicle) is coded 08 or 09 and 3.6 (Casualty Class) is coded 2, then 3.15 must be coded 1 or 2.
CODES

0. Not a bus or coach passenger
1. Boarding
2. Alighting
3. Standing passenger
4. Seated passenger

NOTES

A. Bus or Coach includes all vehicles within 2.5 (Type of Vehicle) codes 11 or 18 (i.e. buses, coaches, minibuses equipped to carry 17 or more seated passengers, and trams or light rail vehicles).

B. A person involved in an accident after safely alighting from a bus, coach or tram should be classed as a pedestrian (i.e. code 0), and the bus, coach or tram should only be recorded if it was subsequently involved in the accident.

C. A person who falls from a bus, coach or tram, or is boarding (code 1) or alighting (code 2) and is struck by another vehicle, should be recorded as a passenger, and the bus/coach/tram should then be recorded as a vehicle involved. Codes 1 and 2 should only be used to indicate that the casualty was actually engaged in boarding or alighting from a bus/coach/tram. They should not be used if the injured person was inside the vehicle passenger compartment either moving to alight or moving to a seat after boarding. Code 3 should be used in these circumstances (the injury will normally occur when the casualty is in the vicinity of the platform or doors).

D. Codes 3 and 4 are to be used for passengers of a bus/coach/tram, injured other than when they were boarding or alighting.
3.17 DfT SPECIAL PROJECTS

NOTES

A. Use of this variable will be explained by DfT as and when mutually agreed.

B. When no special project is under way, the box should be left blank, since irrelevant entries are confusing when a DfT special project is in progress in selected areas.
3.18 CASUALTY HOME POSTCODE

CASUALTY HOME POSTCODE or one of the following CODES

1. Unknown
2. Non-UK resident

NOTES

A. Complete as far as possible if full postcode not known.
   EXAMPLE: A B 1 __ __

B. Left justify first four boxes.
   EXAMPLE: A 1 __ 2 C D

C. Special codes to be inserted in left hand box.
   EXAMPLE: 1 __ __ __

D. If postcode not immediately available, leave blank.

E. Students living away from home should give the postcode for their temporary address during term time and for their permanent address at all other times.
3.19 PEDESTRIAN INJURED IN THE COURSE OF ‘ON THE ROAD’ WORK

Work activity carried out on public road (eg. delivery services, road maintenance, traffic control)

CODES

0. No
1. Yes
2. Not known

NOTES

A. If the casualty was not a pedestrian, leave this box blank.

B. ‘On the road’ work relates to a work activity carried out on the public highway/road (eg. road maintenance, delivery/collection/inspection services, traffic control) and not trips made between different work locations in the course of work carried out other than on the road.

C. The definition of ‘on the road’ work thus relates to those work activities which are readily identifiable to the reporting police officer. Officers are not asked to code as 1 people making trips between different work places because such people may not be readily identifiable without questioning them.
ANNEX 4 - CONTRIBUTORY FACTORS

ROAD ENVIRONMENT CONTRIBUTED

Codes 101 - 109 should be used where the road itself, or related street furniture, is deemed to have contributed to the accident. This includes animals or objects in the carriageway.

Use codes 702 - 704 where the road environment is linked to visibility problems or codes 801 - 810 where a pedestrian in the carriageway contributed to the accident.

The reporting officer should identify the vehicle (or in exceptional circumstances, the pedestrian) to which the code applies. Wherever possible, the reporting officer should identify the one participant to which the code most applies. Only where two or more vehicles are equally affected by the same code should that code be attributed to more than one vehicle.

INDIVIDUAL CODES

101 Poor or defective road surface

Includes any obvious road surface defect such as potholes and cracks. Also includes roads where a worn surface or poor skid resistance is thought to have contributed to the accident.

102 Deposit on road (eg. oil, mud, chippings)

Include any deposit arising from human (or animal) activity which has made sections of the road surface slippery or which has caused traction control problems for a vehicle.

103 Slippery road (due to weather)

To be used where the weather has caused the road surface to become slippery. This will be, mainly, wet or icy roads but will also include roads which are slippery because of melting tarmac.

104 Inadequate or masked signs or road markings

The warning or directional road signs or road markings, at the accident location, could not be clearly seen or read.

Includes road signs which are obscured by trees/vegetation or where the sign is unreadable due to glare or poor condition. Also includes road markings which have been worn away or covered by snow.

This code should also be used where the size, siting or lack of road signs or markings contributed to the accident.
105 **Defective traffic signals**

A totally, or partially, defective automatic traffic signal contributed to the accident.

Includes traffic signals which have previously been damaged by vehicle impact and have become misaligned.

Part-time signals outside the times of normal operation (and, therefore, not illuminated) should not be regarded as defective.

106 **Traffic calming (eg. speed cushions, road humps, chicanes)**

To be included where any traffic calming measure has contributed to the accident.

107 **Temporary road layout (eg. contraflow)**

Includes contraflow sections on dual carriageways, single alternate line working at roadworks on two way roads and all other locations where a temporary road layout has contributed towards an accident.

108 **Road layout (eg. bend, hill, narrow carriageway)**

Use this code where the permanent layout of the road has contributed to the accident, including narrow lanes on dual carriageways and/or adverse camber.

This code is likely to be used often in conjunction with other codes (eg. loss of control on bend or poor driver behaviour on narrow road).

This code should **not** be used where the road layout contributed to a **visibility** problem and in such cases use the appropriate code from the group headed 'Vision affected by' (codes 701 to 710).

109 **Animal or object in carriageway**

'Animal' includes any animal (not just those defined in the Road Traffic Act) which contributed to the accident, whether or not the animal was hit. Excludes ridden horses and animals pulling vehicles (eg. horse and trap) because these are treated as vehicles in their own right. Pedestrians are also **not** included.

'Object' is defined as any object which the driver would not expect to find in the carriageway (eg. dislodged vehicle load, fallen tree) and which caused or contributed to the accident. Excludes permanent features such as bollards, refuges, kerb etc.
VEHICLE DEFECTS

Codes 201 - 206 should be used where a vehicle (including, where appropriate, pedal cycles, ridden horses, horse drawn vehicles or other non-motor vehicles) defect is identified as contributing to the accident or where there are grounds for suspecting that the defect contributed.

Includes defects on towed trailers or caravans. Codes should be attributed to the towing vehicle.

Use code 999 where a vehicle defect not listed below has caused, or contributed to, the accident. Brief details must be supplied.

INDIVIDUAL CODES

201 Tyres illegal, defective or under-inflated
   Includes tyre "blow-outs" and over-inflated tyres.

202 Defective lights or indicators
   Only to be used if there was a fault with the lights or indicators.
   For failure to signal or turn on lights see codes 404 & 506. Also use code 506 to record a pedal cyclist without lights.

203 Defective brakes
   Only to be used where there was a fault in the breaking system which contributed to the accident.
   Use code 307 to record a pedal cyclist failing to stop because of wet brakes.

204 Defective steering or suspension
   Only to be used in cases where defective steering/suspension contributed to the accident.

205 Defective or missing mirrors
   Includes mirrors which were poorly set, thereby creating a "blind spot"

206 Overloaded or poorly loaded vehicle or trailer
   Includes vehicles carrying too many passengers and load movement in goods vehicles.
INJUDICIOUS ACTION

DRIVER/RIDER ONLY

Codes 301 - 310 should be used, mainly, in cases where a driver has performed a manoeuvre or driven in such a manner as to contribute to the accident, and should be used regardless of whether or not the police propose taking further action against the driver.

These codes, which describe the driver/rider's actions, can be used in conjunction with codes 501 - 607 which provide further detail on why these actions were taken.

INDIVIDUAL CODES

301 Disobeyed automatic traffic signal

Driver/Rider did not stop at automatic traffic signal set at red.

Code applies to permanent and temporary traffic signals (eg. at roadworks).

This code should not be used for non-junction pedestrian crossings (eg. pelican or toucan - see code 304).

302 Disobeyed "Give Way" or "Stop" sign or markings

Driver/Rider did not stop at "Stop" sign or give way at "Give Way" sign or road markings. Includes manually operated Stop/Go signs at roadworks.

Code will often be used in conjunction with codes 401 & 402.

303 Disobeyed double white lines

Driver/rider deliberately crossed double white line road markings prior to accident.

Do not use this code to record a vehicle crossing the double white lines as result of losing control.

304 Disobeyed pedestrian crossing facility

Driver/rider caused accident by failing to stop (whether intentionally or not) at a pedestrian crossing.

For this code, a pedestrian crossing is defined as a Zebra crossing or Pelican, Puffin, Toucan or similar light controlled crossing. Central refuges, without any traffic control, are not treated as pedestrian crossings for the purposes of this code.

Use code 301 for driver/riders causing pedestrian accidents at traffic signal junctions.
305  **Illegal turn or direction of travel**

Includes turning left/right at junctions (or performing a "U-turn") where this is not permitted, or travelling the wrong way down a one way street or on the wrong side of a dual carriageway.

Includes turnings where specific types of vehicle are banned (eg. car turning at a junction where only buses are permitted to turn).

Do not use this code where a driver crossed briefly onto the wrong side of the road during a manoeuvre (eg. overtaking).

---

306  **Exceeding speed limit**

Driver/rider caused, or contributed to the accident, by exceeding the posted speed limit. This code should also be used in cases where the actions of another road user were the immediate cause of the accident but a speeding vehicle also contributed to causing the collision.

Includes exceeding variable speed limits (eg. on motorways) and speed limits based on vehicle type (including towing).

Use this code (not code 307) if driver/rider was exceeding the speed limit and travelling too fast for the conditions.

---

307  **Travelling too fast for conditions**

Driver/rider was travelling within the speed limit, but their speed was not appropriate for the road conditions and/or vehicle type (including towing), and contributed to the accident.

---

308  **Following too close**

Driver/rider was too close to the vehicle in front to avoid collision.

---

309  **Vehicle travelling along pavement**

Code can apply to any vehicle type (including ridden horses) travelling along the pavement. Code only applies to vehicles which were intentionally travelling along the pavement. Includes pedal cycle riders or drivers of electric invalid vehicles colliding with pedestrians, or being hit by vehicles emerging from private driveways.

Do not include vehicles which were travelling along or across the pavement as a result of having lost control on the main carriageway. Also, skateboards, toy scooters and toy tricycles are not defined as vehicle types and should not be included within this code.

This code is not intended for use with shared use facilities.

---

310  **Cyclist entering road from pavement**

Pedal cyclist contributed to the accident by riding from the pavement into the road.

Also includes cyclist crossing road on pedestrian or toucan crossing.
DRIVER/RIDER ERROR OR REACTION

DRIVER/RIDER ONLY

Codes 401 - 410 relate to an error of judgement by a driver/rider, or an action resulting from another party’s actions. In many cases, further codes can be used to explain why these actions were taken (eg. impairment or distraction).

INDIVIDUAL CODES

401 Junction overshoot

Code should be used to record a driver/rider who did not stop at a junction and overshot the stop line or give way markings. This code will frequently be used in conjunction with other codes which will give further detail on why the overshoot happened.

Code should not be used to record an overshoot at working automatic traffic signals (use code 301) but may be used if the automatic traffic signals are defective.

402 Junction restart (moving off at junction)

Identifies a driver/rider who has successfully stopped (or slowed to give way) at a junction, but has then moved off, and in doing so, has contributed to an accident. As with code 401, other codes can be used to explain why this action was taken (eg. impairment or distraction).

403 Poor turn or manoeuvre

Applies to any manoeuvre performed by the driver/rider which caused, or contributed to, the accident. Examples include reversing, turning left, right or U-turn, changing lanes or overtaking.

Also include poor vehicle positioning (eg. in middle of road, in wrong lane at junction or encroaching into bus/cycle lane).

Where codes 402 and 403 could both apply, use code 402.

404 Failed to signal or misleading signal

Indicates that driver/rider misled another road user (including pedestrian) by either giving a bad signal or by not signalling at all.

405 Failed to look properly

A driver/rider either failed to look where they were going or they looked, but misinterpreted what they saw (looked but did not see). Code may be used where driver/rider was not paying attention to the road ahead.

Code may be used in conjunction with code 402.
406 Failed to judge other person's path or speed

Driver/rider misinterpreted the intentions or actions of another road user. Includes misjudging a gap in the traffic when entering a main road, misjudging an overtaking manoeuvre (including passing too close to motorised vehicles) or wrongly anticipating the vehicle ahead in a queue moving off.

407 Passing too close to cyclist, horse rider or pedestrian

Use this code whether or not there was contact between the cyclist/horse rider/pedestrian and the passing vehicle.

Identify the passing vehicle in the "Which participant" box (not the cyclist, horse rider or pedestrian).

Includes contact with overhanging wing mirrors.

408 Sudden braking

To be used where a vehicle's sudden braking caused, or contributed to, an accident (regardless of whether the driver/rider was blameworthy). Do not use this code simply to record that a vehicle braked suddenly if this did not cause, or contribute to, the accident.

Code 308 will often be allocated to another vehicle in the same accident.

Use code 408 to record a bus breaking suddenly, causing a passenger to fall and injure themselves.

Includes vehicles braking suddenly for safety cameras.

409 Swerved

Use when swerving is a definite decision on the part of the driver to change direction suddenly.

Do not use this code simply to record that a vehicle swerved if this did not cause, or contribute to, the accident.

410 Loss of control

This code should be used where a driver/rider lost control of their vehicle, thereby causing or contributing to an accident, whether or not they were considered to be at fault. Wherever possible, at least one more code should be allocated to the same driver/rider to give an indication of why they lost control.

Includes ridden horses.
IMPAIRMENT OR DISTRACTION

DRIVER/RIDER ONLY

Codes 501 - 510 help explain why an accident happened and mainly centre on factors which hindered the driver/rider's performance. As with all codes 301 - 710, pedal cyclists, horse riders and other driver/riders of non-motor vehicles are included.

INDIVIDUAL CODES

501 Impaired by alcohol

Driver/rider was affected by alcohol and behaved in a way which caused, or contributed to, the accident - whether or not they were above the legal limit.

502 Impaired by drugs (illicit or medicinal)

Driver/rider was affected by drugs and behaved in a way which caused, or contributed to, the accident. Applies to illicit drugs as well as all medicines, whether prescription or 'over the counter'.

503 Fatigue

Driver/rider was so tired that they could not drive effectively or were unable to perceive hazards.

504 Uncorrected, defective eyesight

Driver/rider's poor vision helped bring about the accident. Includes driver/rider not wearing glasses when they should, or wearing the wrong glasses.

505 Illness or disability, mental or physical

Includes driver/rider either suddenly overcome by illness (eg. fit or blackout) or generally affected by illness (eg. cold or 'flu), or driver/rider suffering from a permanent disability, which contributed to the accident. Includes where a driver/rider sneezing or coughing contributes to the accident.

Also includes driver/riders suffering from poor mental health (eg. depression).

506 Not displaying lights at night or in poor visibility

Poor visibility includes twilight or other poor light conditions and/or weather related conditions (eg. rain or fog).

Includes cyclists riding at night without lights as well as motor vehicle driver/riders who have failed to turn on their lights (whether intentionally or not).
507  Cyclist wearing dark clothing at night

To be used in accidents where, if the cyclist's clothing had been brighter, then they would have been seen in time and the accident would not have occurred. Can be used in conjunction with code 506 if necessary.

508  Driver using mobile phone

Includes 'hand held' and 'hands free' phones, where their use (or attempted use) contributed to the accident, whether or not the driver has been reported for an offence.

Includes motorcycle and pedal cycle riders.

509  Distraction in vehicle

Use this code where a driver/rider was distracted by an event or action (including passenger action) occurring within the vehicle which prevented them from paying attention to the road.

Examples include adjusting radio, attending to child in distress, eating or drinking, lighting/dropped cigarette or wasp etc in vehicle.

510  Distraction outside vehicle

Use this code where a driver/rider was distracted by an occurrence outside the vehicle (eg. admiring the scenery, reading advertisement hoarding, accident on opposite carriageway) and which prevented them from paying full attention to the driving environment before the accident.
BEHAVIOUR OR INEXPERIENCE

DRIVER/RIDER ONLY

Codes 601 - 607 help explain why a driver/rider's actions contributed to the accident.

INDIVIDUAL CODES

601 Aggressive driving

Use this code where the road user (including pedal cyclist) was driving/riding in an aggressive and/or dangerous manner which caused, or contributed to, the accident.

Includes cases where the driver/rider was competing (or similar interaction) with another road user. Also includes road rage, but not physical violence outside the vehicle.

602 Careless, reckless or in a hurry

Driver/rider either behaved in a negligent or thoughtless manner or was in a hurry and, therefore, behaved in an unsafe manner. This covers cases where the person shows lack of concern about the possible consequences of their actions (careless), acts in spite of the likely consequences (reckless), or fails to consider the consequences of their actions as a result of being in a hurry.

603 Nervous, uncertain or panic

Driver/rider behaved in such a nervous or uncertain manner that other road users were unable to predict their likely path, or driver/rider panicked in response to circumstances on the road.

604 Driving too slow for conditions, or slow vehicle (eg. tractor)

Use this code where a slow moving vehicle caused or contributed to the accident, even if the vehicle was not hit.

605 Learner or inexperienced driver/rider

Use this code where inexperience of driving in general, or inexperience of the particular type (but not model - see code 607) of vehicle, caused or contributed to the accident.

Includes inexperienced pedal cyclists or horse riders. Also includes under-age motor vehicle driver/riders.

Do not use this code simply to record the presence of a learner or inexperienced driver/rider.

606 Inexperience of driving on the left

Includes a temporary lapse by a foreign driver otherwise familiar with driving on the left.

Code may be used in conjunction with codes 305, 405 and 710.
607  Unfamiliar with model of vehicle

Use this code where a reasonably experienced driver/rider makes an error because of lack of familiarity with a particular model of vehicle. Examples include a motor cycle rider on a machine with a larger engine capacity than they are used to or a car driver unfamiliar with the controls in a different model of car.

Use code 605 for driver/riders unfamiliar with a particular type of vehicle.
VISION AFFECTED BY
DRIVER/RIDER ONLY

Codes 701 - 710 are used to record all factors which affected a driver or rider's vision. These factors are used when a failure or poor manoeuvre occurs because a driver/rider's view is obscured, preventing them from seeing a hazard, such as an approaching vehicle or a pedestrian in the road, and it appears that they could have avoided the hazard if they had been able to see it clearly.

INDIVIDUAL CODES

701  Stationary or parked vehicle(s)

The view of the driver/rider was obscured by a stationary or parked vehicle so they failed to recognise the path of another road user (eg. vehicle pulling out from junction or pedestrian crossing road) leading, either directly to a collision with that road user, or to the driver taking avoiding action, which then resulted in a collision.

The vehicle identified in the "Which participant" boxes should be the vehicle which was affected by the obscured vision not the masking vehicle.

For pedestrian accidents, code 701 will often be used in conjunction with code 801.

702  Vegetation

Use this code where the driver/rider's vision was affected by trees, hedges or any other form of vegetation.

Use code 104 where road signs are obscured by vegetation.

703  Road layout (eg. bend, winding road, hill crest)

Only use this code where the driver/rider's vision was affected by the road layout (eg. failing to see pedestrian crossing road at bend, or vehicle overtaking near crest of hill).

Use code 108 where any other factor relating to the road layout, other than driver/rider vision, contributed to the accident.

704  Buildings, road signs, street furniture

Use this code where the driver/rider's vision was affected by buildings, road signs, street furniture or any other man-made feature on, or near, the highway.

705  Dazzling headlights

The vehicle identified in the "Which participant" boxes should be the vehicle in which the driver/rider was dazzled by headlights not the vehicle displaying the dazzling lights.
706 **Dazzling sun**

Use this code where the driver is dazzled either directly by the sun or by the sun's reflection.

707 **Rain, sleet, snow or fog**

Only use this code where the driver/rider's **vision** was affected by these weather conditions and this contributed to the accident.

Use code 103 where the weather contributed to poor road conditions.

708 **Spray from other vehicles**

The vehicle identified in the "Which participant" boxes should be the vehicle in which the driver/rider's vision was affected by spray **not** the vehicle causing the spray.

709 **Visor or windscreen dirty or scratched**

Only use this code where a dirty or scratched windscreen or visor affected the driver/rider's vision and contributed to the accident.

Includes frost covered windscreen or misted windscreen/visor.

Do not use this code simply to record the presence of a dirty/scratched windscreen or visor.

710 **Vehicle blind spot**

This refers to cases where a driver is unable to see a pedestrian or another vehicle because of a blind spot caused by the design of the vehicle (e.g. windscreen or door pillars) or inadequate coverage of the mirrors.

Includes restricted rear vision caused by vehicle loading and blind spots on left hand drive vehicles.
PEDESTRIAN ONLY (CASUALTY OR UNINJURED)

Codes 801 to 810 only apply to pedestrians who have contributed to the accident, whether or not they were injured. Where they were a casualty, they should be identified by their reference number in the "Which participant" boxes (eg. C001). Where they contributed to the accident but were not injured, the reference "U000" should be entered in the "Which participant" boxes.

Do not use these codes simply to record the presence of a pedestrian, if their actions did not cause, or contribute to, the accident.

INDIVIDUAL CODES

801 Crossing road masked by stationary or parked vehicle

Pedestrian entered the carriageway from behind a stationary or parked vehicle which obscured him/her from the view of oncoming traffic.

Code will often be used in conjunction with code 701.

802 Failed to look properly

Pedestrian either failed to check the road for traffic when entering the carriageway, or looked but misinterpreted what they saw (looked but did not see).

Wherever possible, at least one more code should be allocated to the pedestrian to give an indication of why they failed to look properly.

803 Failed to judge vehicle's path or speed

Before entering the carriageway, pedestrian saw approaching vehicle but misjudged its speed or intended manoeuvre.

May be used in conjunction with code 404.

804 Wrong use of pedestrian crossing facility

Pedestrian entered the carriageway at any crossing with pedestrian lights while the lights indicated that the pedestrian should wait. Includes pedestrians entering the carriageway at a zebra crossing but failing to give the driver sufficient time to stop.

Code should not be used at traffic signal junctions without pedestrian phase.

805 Dangerous action in carriageway (eg. playing)

Pedestrian was acting in a dangerous manner in the carriageway either deliberately or through negligence. Examples include children playing in the street, deliberately crossing in front of speeding traffic or people collapsing drunk in the carriageway.
806 Impaired by alcohol

Pedestrian was affected by alcohol (whether or not completely drunk) and behaved in a way which caused, or contributed to, the accident. This code may be used in conjunction with codes 801 - 805.

807 Impaired by drugs (illicit or medicinal)

Pedestrian was affected by drugs and behaved in a way which caused, or contributed to, the accident. Applies to illicit drugs as well as all medicines, whether prescription or ‘over the counter’. This code may be used in conjunction with codes 801 - 805.

808 Careless, reckless or in a hurry

Pedestrian either behaved in a negligent or thoughtless manner or was in a hurry and, therefore, behaved in an unsafe manner. This covers cases where the person shows lack of concern about the possible consequences of their actions (careless), acts in spite of the likely consequences (reckless), or fails to consider the consequences of their actions as a result of being in a hurry.

Also includes cases where a pedestrian was distracted (eg. using mobile phone).

809 Pedestrian wearing dark clothing at night

To be used in accidents where, if the pedestrian's clothing had been brighter, then they would have been seen in time and the accident would not have occurred.

810 Disability or illness, mental or physical

Includes pedestrian either suddenly overcome by illness (eg. blackout) or generally affected by illness (eg. cold or 'flu), or pedestrian suffering from a permanent disability (including poor eyesight), which contributed to the accident.

Also includes pedestrians suffering from poor mental health (eg. depression).
SPECIAL CODES

Codes 901 - 903 apply to vehicles being driven in special circumstances, which contributed to the accident, whilst code 904 covers one specific scenario.

Code 999 should only be used where no other code adequately summarises a factor which contributed to the accident.

INDIVIDUAL CODES

901 Stolen vehicle

The vehicle identified in the "Which participant" box must be the stolen vehicle.

Use this code only where the fact that the vehicle was stolen influenced the driver/rider's behaviour and contributed to the accident. Do not use this code simply to record the presence of a stolen vehicle.

902 Vehicle in course of crime

Use this code to record a vehicle which was being driven/ridden in the course of a crime and where this influenced the driver/rider's behaviour and contributed to the accident.

Use this code also where the vehicle was being pursued by the police in response to a suspected crime.

903 Emergency vehicle on a call

Use this code to record all emergency vehicles which were responding to emergency calls and which caused or contributed to the accident. Emergency vehicle should be displaying flashing blue light. Emergency vehicles include ambulances, fire engines (and other fire service vehicles), police, mountain rescue and coastguard vehicles. Also includes unmarked vehicles displaying flashing blue light.

Do not include emergency vehicles not displaying flashing blue light (eg. police cars on routine patrol, ambulances conveying patients to day centres or routine hospital appointments or fire engines returning from a call).

904 Vehicle door opened or closed negligently

Driver or passenger opened a vehicle door causing a collision with another vehicle (eg. pedal cycle or motor cycle) or caused a passing vehicle to swerve which then contributed to an accident.

Also applies to buses in which passengers are injured by opening or closing doors. Includes drivers who close vehicle door, trapping an alighted passenger's clothing, and then driving off.
999 Other - please specify below

To be used only when no contributory factor is available to describe a particular circumstance which contributed to the accident.

Includes all cases where a passenger caused or contributed to their own injury (eg. jumping from vehicle, "stealing a ride" and falling from vehicle, or being drunk and falling in bus).

Code will also include all vehicle defects not listed in codes 201 - 206 (eg. Wheel became detached from vehicle, engine fire or engine seized).
ANNEX 5 - DISCONTINUED STATS19 VARIABLES

The following variables are no longer required:

### Notes

- The same factor may be related to more than one road user.
- The participant should be identified by the relevant vehicle or casualty ref no. (e.g., 001, 002, etc.), preceded by "V" if the factor applies to a vehicle, driver/rider or the road environment (e.g., V703), or "C" if the factor relates to a pedestrian or passenger casualty (e.g., C001).
- Enter U000 if the factor relates to an uninvolved pedestrian.

### Special Codes

- Factor in accident
  - 1st
  - 2nd
  - 3rd
  - 4th
  - 5th
  - 6th

### Other

- Please specify below

---

*If 999 Other, give brief details
(Note: Only use if another factor contributed to the accident and include it in the text description of how the accident occurred)

---

These factors reflect the reporting officer's opinion at the time of reporting and may not be the result of extensive investigation.
