As an island nation the UK’s commerce with the rest of the world has cultivated our expertise in maritime business. It is an expertise that we are proud to offer on a global scale.

We have a maritime services sector which is already worth up to £14bn per year despite global economic headwinds, and which is attracting maritime businesses from around the world.

Alongside this, our quality flag, attractive tonnage tax regime, strong competitive ports, expert maritime business services and vibrant maritime training programmes, together with a stable regulatory framework, make the UK a great place to do business.

And let’s not forget, the Greenwich Meridian – quite literally – makes us the centre of the shipping world. Our central time zone means you can do business with both sides of the world in the same working day.

To ensure this sector maximises its full potential, I have established – and personally chair – a body of Ministers and leaders from across Government and industry with a clear focus on maximising growth and opportunities, while maintaining a stable fiscal and regulatory environment. This partnership is already bearing fruit, fostering a closer and more co-ordinated approach with both shipping and the wider maritime industry – continuing to propel forward the UK’s leading position in maritime business.
The World Bank ranks the UK as the easiest major European economy in which to set up and run a business. The UK’s labour market is highly flexible. This factor, combined with the strong skills base, is reflected in our ability to attract foreign investors.

Key attractions to investors are the open nature of the economy, a stable regulatory framework, political stability, a respected judicial system, world-class infrastructure and a pro-business culture. Recent survey findings by Ernst and Young and the Financial Times highlight investor confidence in the UK and recognition that it continues to be a world-leading business destination.

Tax credits are available for small, medium and large enterprises. Large companies can attract 130% tax deductions and SMEs 225% tax deductions for qualifying R&D expenditure. In addition, the UK has 24 Enterprise Zones offering businesses simplified planning processes and discounts on business rates.

The UK’s successive reductions in corporation tax have made the UK tax system globally competitive. The standard rate of corporation tax is 23% and is due to reduce to 21% in April 2014 and to 20% in April 2015. This will be the lowest in the G7 and joint lowest in the G20.

In 2013, the UK Government reduced the top rate of income tax from 50% to 45%, providing international investors with an affordable home-from-home. UK-resident non-domiciled persons may otherwise annually elect to pay a tax charge of up to £50,000, so that income and capital gains from non-UK sources attract UK taxation only when remitted to the UK for reasons other than business investment.

Shipping, ports and maritime business services are global by nature and have long extended a welcome to overseas investors. Coming up, we shall see how mature incentives, such as tonnage tax, attract shipping to the UK and its flag. We shall also see how an open, market-led ports sector, with a clear and favourable planning climate for new development, has helped sustain investment throughout difficult global economic conditions.

UK Trade & Investment is the Government department which helps overseas companies bring their high-quality investment to the UK’s dynamic economy – acknowledged as Europe’s best place from which to succeed in global business.
The UK has a proud maritime history and our sector remains of key importance today, not only through shipping, ports and marine industries, but also the maritime professional and business services sector on which the industry relies. The City of London is rightly recognised around the world as a vital hub for these services.

The contribution of the maritime sector to the life and economy of the UK is fully appreciated at the highest levels of Government.

A RESILIENT SECTOR

The UK maritime services sector is worth up to £14bn per year to the UK economy and, most importantly, it is a sector that is steadily growing, despite the challenges facing businesses at home and abroad. UK jobs have grown to 165,000, an increase of 6% since 2009. London remains the largest maritime centre in the world for professional, business and financial services. The UK is keen to hold its leading position and recognises the importance of investing in the maritime workforce of the future with a £12m budget to support maritime training.

The UK's cruise market is also growing, with passenger numbers increasing threefold over the past 10 years. Investing in the UK maritime services sector provides access to some of the most skilled, highly-trained and committed workforces in the world – on ships, in port and in the City of London.

Productivity is on average 10% higher than the national average, proving that your investment will be in safe hands.
London and the UK are home to significant numbers of international shipowners, operators and managers as a result of the range of shipping expertise available, a business-friendly tax regime and the advantage of doing business in an international city which is at the heart of the global financial system – London is Europe’s largest economic zone. However, other factors are at play which make London attractive. These include transport links; the ease with which companies can find suitable office locations; the ability to hire highly skilled and expert staff, including experienced ex-seafaring officers working in a range of shipping sectors; and the ability to exploit London as a cosmopolitan capital with world-class schools, universities, hotels, restaurants, theatres, conference venues… the list goes on.

London has become the natural home for shipping and maritime business services. Greenwich Mean Time provides investors with the perfect opportunity to manage their global business and most comprehensive base for world-leading maritime law, arbitration, insurance, classification, shipbroking and financial services. It also hosts the International Maritime Organization – the UN’s regulator of the international industry.

The maritime services sector has seen higher productivity than many other sectors. 9,500 extra jobs were created in the period 2009-2011 (an increase of 6% – while the national average fell by 0.4%). In 2011, the combined maritime services sector was almost 10% more productive than the economy-wide average, with ports and business services especially high; the economic cycle has had a particular impact here – in 2009, the sector was 30% more productive.

As a result, London sees more than 10,000 of the most highly trained, experienced experts in maritime business working across all disciplines, providing world-class services to every corner of the globe. Businesses invest in London because they respect its history and trust its knowledge, expertise and thought-leadership. They invest here because they know, in doing so, they will be working with the very best.

London is often called a ‘one-stop shop’ for maritime business services. The City is home to dozens of companies providing expertise in maritime law, arbitration, classification, shipbroking, insurance, ship management and financial services. Companies feed off one another, striving to improve in a competitive market, creating a ‘race to the top’ culture that demands, and achieves, excellence.

No other country in the world can boast the breadth and depth of business expertise.
SHIPPING IN THE UK – AN ISLAND NATION

The UK is the quintessential island nation. With its seafaring tradition rooted in thousands of years of history, unrivalled knowledge and expertise has been passed down through the generations to provide a highly-competitive environment for the world's shipping community.

As you will see in this section, UK-based shipping companies enjoy one of the most efficient tonnage tax regimes of anywhere in the world, which is one of the primary reasons major companies – from containers to cruise lines and every other sector – have flocked to the UK.

Our workforce benefits from some of the most rigorous training standards, providing the global fleet with highly skilled, dedicated seafarers, many of whom eventually return to shore to use their expertise for the benefit of maritime services companies in the shipping and ports sector, as well as those based in the City of London.

The industry also benefits from excellent relationships with Government, which provides significant support and encourages a holistic approach to providing some of the most competitive, stable and certain trading conditions to be seen anywhere in the world.

Shipping is embedded in the very heart of the nation – it moves 95% of the UK's international trade. The country's passion and respect for the sea is matched only by its skill and ingenuity in making use of it. Read on to find out why the UK is the natural home for your shipping business.

HOME OF THE INTERNATIONAL MARITIME ORGANIZATION (IMO)

LONDON VALUES IMO’S PRESENCE
The UK is proud and honoured to host the IMO and takes this responsibility very seriously. Its location in London means there is access to key decision-makers and experts through the strong presence of maritime attachés in London embassies and the headquarters of many international non-Governmental organisations.

LONDON ENGAGEMENT
The IMO provides a focus for international maritime regulatory issues. The UK remains resolutely committed to its full and positive support and promotion of the IMO as a key place for the development of international maritime regulation and direction. The UK maintains an active role in key aspects of the IMO’s work through its Assembly, Council, the Committees and their subsidiary bodies.

KEY OBJECTIVE AT THE IMO
The work of the IMO is essential in establishing standards to ensure safety of seafarers and passengers and cleaner seas. The IMO also contributes to economic growth by promoting better regulation principles and reducing unnecessary administrative burdens on the shipping industry.

It is the goal of the UK to ensure regulations approved by the IMO are both effective and proportionate. The UK seeks to strike the right balance between protecting the safety of seafarers and passengers and freeing businesses from unnecessary burdens.
MARITIME SKILLS
UK excellence in training the maritime workforce of tomorrow

The UK is globally recognised as a world-class centre for maritime education and training. With internationally-recognised educational provision and professional skills development in well-versed universities and colleges, it meets the varied needs of the global shipping industry.

Underpinned by a strong, innovative and highly-regarded research capability across a range of disciplines, the specialist maritime departments in a number of universities offer first-class facilities and teaching to UK students and those from overseas.

Twenty-six UK universities and colleges offer marine and maritime courses to varying levels, including higher level education, as well as numerous private education centres and professional organisations. There are well over 10,000 students.

For school and college leavers, a full range of MCA-approved maritime training is offered. A number of career paths are available, covering training for cadets and ratings, as well as courses tailored for specific needs.

Other encouragement for employers includes the ‘Support for Maritime Training’ budget, Maritime Apprenticeships and the Tonnage Tax Training Commitment.

*On net tonnage, for ships under strategic management of a UK office

minimum training obligation, which requires each shipping company to recruit and train one officer trainee each year for every 15 officer posts in its fleet, and to give consideration to employment and training opportunities for ratings.

Currently there are 80 companies in the UK’s regime, accounting for 900 ships.
The UK Ship Register is the ‘flag of choice’ for its customers because of its commitment to service and its reputation for quality.

Customers can contact experts 24 hours a day, seven days a week. Those experts know and understand the shipping industry and make sure ships can trade internationally with the right certification.

Our registration and survey fees are among the lowest available, but deliver services that keep the UK among the very top performers for the Paris and Tokyo Port State Control regimes. They also meet the demanding Qualship21 standard in the USA. Ships can get support from knowledgeable, expert marine surveyors if they encounter difficulties with other Port State Authorities.

Customers like our one-stop shop service, which means we can audit ships and companies against all the relevant ISO standards – plus the Safety Management and Ship Security requirements – at the same time as carrying out our surveys. One auditor for so many audits is good news.

In summary, the UK Ship Register works with owners and operators to meet their needs, while also providing expert advice on safety and meeting international standards. That is why so many companies choose to register their ships with us.
PROVIDING A SECURE MARITIME ENVIRONMENT

The Royal Navy delivers the stability necessary for economic prosperity by being forward deployed around the globe to protect trade routes and guard the world-wide flow of energy and resources. Men and women are at sea every day, working with international partners to provide global maritime security where it is needed. The Royal Navy prevents conflict by operating across the world to deter threats by reassuring regional allies and stabilising potential hotspots. It promotes stable and co-operative relationships with friendly and neutral nations around the world through training and working together, and determining common understanding.

The Royal Navy works with international allies and coalitions to deter, detect and disrupt criminal activity at sea.

“...The Royal Navy delivers the stability necessary for economic prosperity...”
The UK has the largest port industry in Europe, handling more than 500m tonnes of cargo and over 22m-plus international passengers every year. With 110 commercially active ports and harbours, the movement of goods and people is embedded in communities throughout the United Kingdom.

The UK ports industry is unique within Europe for its largely private sector market-led structure, which gives it the flexibility to respond to new trends at competitive prices, and accommodate users from all sectors of global shipping.

As a sign of the UK’s ambition, significant investment has been made in major ports such as Southampton, Felixstowe, Liverpool and the new London Gateway, and ports across the country are responding to innovations in the offshore renewables sector, creating the infrastructure necessary to make the UK a world leader in green energy. Many core UK businesses including oil and gas, fishing, leisure and tourism, all depend on the services provided by the UK’s remarkable network of ports.

The investment is equipping the country for the future. It is creating an environment where we are ready to trade with the world’s largest ships – including containers, carriers of liquid and dry bulk, ro-ro and the growing number of cruise services.

UK marine manufacturers design and produce high-quality marine equipment products and services to defence, energy, shipbuilding and boatbuilding customers in the UK and across the world. The three broad business segments, in which UK marine companies sell their capability, are commercial and naval, leisure marine, and energy.

UK marine exports totalled £1.4bn in 2011 – exports to non-EU countries have increased fivefold since 2007.

Commercial and naval sector strengths include: naval architecture; ship maintenance; repair and conversion; systems integration; navigation; electronics; propulsion; data management; water treatment systems; marine science; and classification societies.

Leisure marine encompasses superyacht, powerboat and yacht manufacture, marine equipment, small workboats and clothing. Strengths include: design and bespoke manufacture of leisure boats and rigid inflatables; composite processing; navigation equipment; electronics; deck gear; and rigging equipment.

In terms of energy, the UK oil and gas supply chain has a value of around £19bn, a third of which comes from exports of UK oil and gas. UK companies offer the experience and knowledge of more than 40 years operating in the North Sea.

In relation to offshore wind, the UK is forecast to invest up to £75bn in offshore wind farms by 2020 and the growth of its wave and tidal industry could attract up to £4bn per annum of investment by 2050. UK marine energy capability encompasses fields including: workboats and associated equipment; oceanography services; oil spill detection and environmental services; marine surveying; and financial, legal, and insurance services.

The UK also possesses strong research institutions and universities, including marine R&D centres at the University of Southampton; the University of Strathclyde; Portsmouth University; and Plymouth University.

The UK has a well-established skills base that supports the marine sector across the supply chain, particularly in advanced engineering composites and design.

The UK has a strong breadth of marine capability delivered through a diverse range of channels.

In addition to some of the world’s leading boat manufacturers and shipbuilders, the UK is home to many companies supplying equipment and other services to the sector.

There are currently more than 150,000 third level students in the UK studying engineering-related degrees. Many universities have specialised R&D marine centres.

The marine energy market has, in recent years, grown significantly. Scotland is a world-leading region for developing and commercialising this sector.
