

# Former Patients of Winterbourne View Case Summaries

30 June 2013

# Background to the case summaries

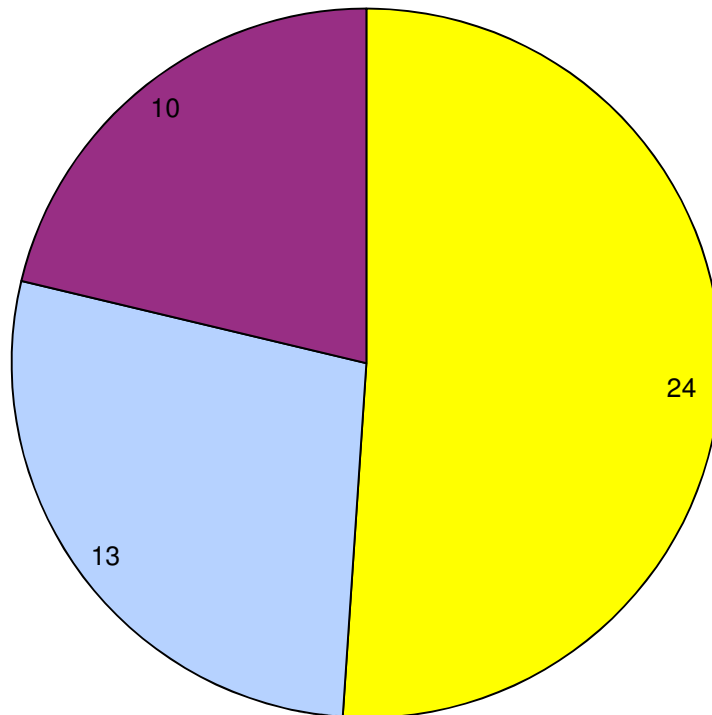

- The following information is collated by NHS England from anonymised reports provided quarterly by 20 commissioners, Local Authorities, Clinical Commissioning Groups and Specialised Commissioning Groups.
- This update provides a snapshot as at 30 June 2013. Since the last report of 1 March 2013, 1 former patient died, therefore the following data relates to a total of 47 former patients.
- This summary identifies trends related to individual support; however, it is important to note that the circumstances for each person are highly individualised.
- The next anonymised data collection (requested by NHS England and ADASS) is November 2013, with a further update to be provided in December 2013.

- The Enhanced Quality Assurance Programme (EQAP) team will be responsible for future collection of information regarding the patients, as well as providing additional assurance that they have had high-quality reviews, have clear care plans and are receiving the best possible support.
- The EQAP team has been established by NHS England in partnership with ADASS and other partners, and is working with family carers and people who use services to provide enhanced assurance.

# Type of service for 47 patients

34 people in social care settings – 13 people in health settings
