Which flu vaccine should you or your child have?

**Birth to under six months**

Babies of this age **cannot** have flu vaccine so the best way to protect them is for their mother to have the vaccination while pregnant.

Expectant mothers can safely have the vaccine at any stage of pregnancy from conception onwards.
Flu vaccination 2014/15

Which flu vaccine should you or your child have?

6 months to under 2 years

Is your child at risk because of one or more medical conditions or treatments?

No
Your child will not be offered the vaccine.

Yes
It’s important that your child has the flu vaccine by injection.

If your child has not had a flu vaccination before, they will need two doses, four weeks apart.
Which flu vaccine should you or your child have?

2, 3 and 4 years

Is your child at risk because of one or more medical conditions or treatments?

No

It’s important that your child has the **nasal flu vaccine**. If they can’t have the nasal flu vaccine because they are allergic to it or for other medical reasons, they should have one dose of the **flu vaccine by injection** unless he or she has never had a flu vaccination before in which case they will need two doses four weeks apart.

Yes

It’s important that your child has the **nasal flu vaccine**. If they can’t have the nasal flu vaccine because they are allergic to it or for other medical reasons, they should have the **flu vaccine by injection**.

If your child has not had a flu vaccination before, they will need two doses of either type of vaccine, four weeks apart.
