Introduction

The Submarine Dismantling Project (SDP) is the MOD’s programme to deliver a safe, secure and environmentally responsible solution for dismantling 27 defuelled submarines. This involves recycling the bulk of the submarine and safely disposing of the remainder.

The submarine’s Reactor Pressure Vessel (RPV) contains Intermediate Level radioactive Waste (ILW) and must be stored for an interim period until it can be processed and sent to a proposed Geological Disposal Facility (GDF) sometime after 2040.

Local Factsheets provide more information on the five shortlisted RPV storage sites (Aldermaston, Burghfield, Capenhurst, Chapelcross and Sellafield) and summarise the results of the Strategic Environmental Assessment (SEA).

This factsheet gives some background on the Aldermaston site. The RPV Store proposals are described overleaf.

SDP

Based on SDP’s current assumptions, the project plan will involve four main steps:

- The RPV is removed from the submarine and placed in a secure container for transport.
- The RPV and container are transported to the RPV storage site by road.
- The RPVs and containers are safely stored until a GDF is available, sometime after 2040.
- The RPVs are repackaged and sent for size reduction. The different types of radioactive waste arising are sent for disposal.

AWE and Aldermaston Site

The Atomic Weapons Establishment provides and maintains the warheads for the UK’s nuclear deterrent, Trident. AWE is contracted to the MOD through a government-owned / contractor-operated arrangement. While the sites and facilities remain in MOD ownership, their management and day-to-day operations are contracted to a private company, AWE Management Limited (AWE ML).

AWE Aldermaston provides advanced research, design and manufacturing facilities. It is situated near to the southern boundary of West Berkshire and neighbours the town of Tadley in Hampshire to the south. The site extends to 285 hectares, the majority of which is nuclear licensed.

Future Site Plans

The AWE Site Development Context Plan¹ includes 10-year Illustrative Site Development Framework Plans for Aldermaston. This plan identifies the longer term land use development plan for the site.

Existing Waste Stores

AWE Aldermaston is the current focus for the management and storage of ILW and other higher activity waste arising from MOD’s strategic weapons programme so there are radioactive waste storage facilities in operation on the site. AWE is proposing an increase in ILW storage capacity through to 2060. AWE Aldermaston receives any radioactive waste arising on the Burghfield site for consignment and/or storage.

Aldermaston Proposals

AWE has confirmed that an RPV Store at Aldermaston could be accommodated within the existing nuclear-licensed site.

The site map above shows the site boundary. The marker by the scale shows the approximate maximum size of an interim RPV storage facility (3,150m²). A location will be determined in due course should Aldermaston be selected as the storage site.

SEA

SDP’s Strategic Environmental Assessment (SEA) assesses environmental effects and information on alternatives. It is a major input to site comparison studies. The Environmental Report and Non-Technical Summary are available on the project web pages with the Consultation Document.

The SEA studies were carried out by independent specialist consultants, with some input from site owners and operators, supervised by experts from the MOD’s Defence Infrastructure Organisation.

Impacts at all sites

Most of the SEA conclusions regarding the potential impact of an RPV store apply to all the shortlisted sites. These are summarised below.

On all sites, there would be minor negative effects from greenhouse gases and energy use for all stages of the project lifecycle though construction, use and eventual decommissioning.

Minor adverse temporary effects are anticipated during construction and decommissioning:

- There is potential for temporary disturbance of habitats and/or wildlife.
- Despite mitigation, there will be some noise and vibration.
- Minor changes to local roads may be required but they are expected to be of minor significance.
- There is some potential for mobilising historic contaminants, depending on the site.
- There may be a temporary visual impact from tall plant (e.g. cranes) and traffic (particularly HGVs).
There may be minor negative effects on waste generation and the capacity of waste management facilities during construction and demolition.

No significant effects are anticipated in the following areas:

- Minimal or no radiological discharges are currently anticipated. This, together with strict regulation, means there are no likely significant effects on local health and well-being.
- There are no land use change issues.

**Impacts at Aldermaston**

A detailed assessment of potential impacts for an RPV store on this site is contained in the SEA Environmental Report. SEA issues specific to AWE Aldermaston are summarised below.

During construction and decommissioning, there could be disturbance of archaeological remains, depending on the siting of the store. No effects are anticipated on the Scheduled Monument (Grim’s Bank) within the site.

During operation, there could be a negative effect on the setting of Aldermaston Court, again depending on the siting of the store.

Based on the SEA results, the MOD expects the RPV store to have minimal socio-economic impact - either positive or negative - on the local economy or the community around the chosen site.

No significant impacts are anticipated in the SEA Environmental Report on the number and types of local jobs available though AWE notes that there would be some local employment during construction.

**Local Transport Routes**

The West Berkshire Council Freight Strategy requires access to AWE Aldermaston to be either from the M3 J6 and A340 or via the M4 J12, A4 and A340.

The SEA notes that there is a width restriction over the Kennet and Avon canal and that RPV transport could be routed from the M3 to the site via the A340. However, if Aldermaston is chosen the RPV route would be confirmed in consultation with local authorities.

There may be up to 3 RPV transports in the first year. Based on initial dismantling of the submarines at Rosyth and then those at Devonport, the long-term rate is expected to be around 1 a year thereafter. If there were some parallel work at Devonport and Rosyth, it could be around 2 a year for a few years.
Local Public Consultation

SDP has involved local stakeholders in the development of the AWE sites Public Consultation programme and kept local authorities and other stakeholders up to date with progress through regular meetings with the local liaison committee.

The project’s Public Consultation includes a comprehensive programme of engagement and local and national events. For the AWE sites this includes:

- A one-day public exhibition and workshops at AWE Recreational Society (17th November).
- A one-day public exhibition and workshops at Burghfield Village Hall (18th November).
- One day public exhibition and workshops at the Community Sports Association (20th November 2014 and 22nd January 2015).
- One-day public exhibitions and workshops at Tadley Community Centre (22nd November 2014 and 23rd January 2015).

There are also two national workshops in January 2015, in Glasgow and Birmingham.

Online Documents

Online information and documents are available at:

Contact Information

Comments and questions on the SDP project should be directed to the team administering the Public Consultation on behalf of the MOD.
