Introduction

This Report
This statistical release presents data on the Broadband Delivery UK (BDUK) superfast broadband programme. More specifically, it derives the number of premises covered per £million of broadband delivery programme expenditure up to December 2014. The headline statistic will be used as an input indicator\(^1\) to measure the performance of the Department for Culture, Media and Sport (DCMS).

Input indicators show what is being ‘bought’ with public money, i.e. the resources being invested into delivering the results that DCMS and partners are aiming to achieve.

This release provides numbers for relevant BDUK expenditure and for premises where superfast broadband services are being made available as a result of BDUK support.

Broadband Delivery UK
BDUK\(^2\) aims to continue to improve the UK’s broadband network, with particular emphasis on making high-speed broadband available in rural communities. BDUK is responsible for managing the superfast broadband programme, while local authorities and devolved administrations are responsible for individual projects.

Broadband Performance Indicator

Key Findings

- 1,908,725 premises had a superfast broadband service made available by the end of December 2014 as a result of BDUK-supported projects;
- BDUK grants to local authorities and budget transfers to devolved administrations amounted to a cumulative £252,084,918 in cash terms up to the end of December 2014;
- This equates to 7,572 premises covered per £million of broadband delivery programme expenditure up to the end of December 2014. Including current claims or using a true accruals basis would lead to higher expenditure figures and lower numbers of premises covered per £million of broadband delivery programme expenditure.

The numbers of premises reported here are those in intervention areas which have Next Generation Access made available at superfast speeds (above 24 Mbit/s download) as a result of BDUK-supported projects. This excludes premises which have superfast broadband available from existing sources. The data combines administrative information reported by local projects and supplier information. Adjustments are made when data are reported to BDUK on a different basis, e.g. at different download speeds.

These premises numbers therefore exclude premises which benefit from the BDUK-supported projects if their resulting speeds are below 24 Mbit/s, even if these benefits help meet BDUK's Universal Service Commitment to raise broadband speeds above 2 Mbit/s in project areas not achieving superfast speeds. They also exclude overspill effects of BDUK-supported projects on premises which already have superfast broadband available.

The expenditure figures reported here represent internal BDUK administrative information on grants to local authorities in England and budget transfers to devolved administrations related to the superfast rollout programme. Total public expenditure on the projects is higher as local authorities and devolved administrations add their own contributions and those from other sources such as the European Regional Development Fund. The total cost of projects will be higher than public expenditure on them with the difference met by supplier investment and revenue from customers.

These expenditure figures exclude BDUK support for Super-Connected Cities, the Mobile Infrastructure Project, the Rural Communities Broadband Fund, the Market Test Pilots, and DCMS administrative expenditure.

Forthcoming Releases

The intention is to publish data up the end of March 2015 in May. An exact date will be pre-released on the National Statistics Publication Hub.

</table>

The timing of BDUK expenditure is indirectly related to the timing of the availability of superfast broadband services, so the input indicator may be volatile initially. To reduce volatility, all data reported here are cumulative from the start of the programme.

The headline figures here are cash based (i.e. when grants are made or budgets transferred). At the end of December an additional £2,244,492 of claims were in process and awaiting approval. This would increase the cumulative BDUK expenditure to £254,329,410 which would equate to 7,505 premises covered per £million of broadband delivery programme expenditure. Expenditure on a true accruals basis would be higher because work has been delivered in advance of claims, leading to a lower number of premises covered per £million of broadband delivery programme expenditure.
Annex A: Background Note

1. Broadband Delivery UK is an Official Statistic and as such has been produced to the high professional standards set out in the Code of Practice for Official Statistics. Official Statistics undergo regular quality assurance reviews to ensure they meet customer needs and are produced free from any political interference. For more information, see http://www.statisticsauthority.gov.uk/assessment/code-of-practice/code-of-practice-for-official-statistics.pdf

2. This report has been produced by Henry Bottomley. Acknowledgement goes to colleagues within DCMS and BDUK partners.
