Detail:

BS EN 62676-3 – Video Surveillance systems for use in security applications, Part 3: Analog and digital interfaces.

This international standard specifies physical, electrical and software interface (non-IP) specifications of analog and digital video interfaces in CCTV devices.

Video interfaces are used both for connection and transmission of surveillance video, audio and control signals. This International Standard applies strictly to CCTV. It is based on broadcast television standards and other standards, and it defines the minimum requirements for analog and digital video interfaces to meet CCTV's requirements, how devices work together and de facto practice.
