

**Question 1:** To what extent do you think our proposed approach to providing national-scale existing information about geology relevant to long-term safety is appropriate? Please give your reasons.

Basic national screening is a good approach. Learning from the last attempt in Cumbria, some basic evidence that the geology of the local area will be safe and suitable for a GDF might ease fear in local communities through those early voluntary stages of consultation, before an in depth survey is completed.

**Question 2:** To what extent do you think that the proposed national information sources are appropriate and sufficient for this exercise? Please give your reasons.

Respondent skipped this question

**Question 3:** To what extent do you agree or disagree with the proposed form of the outputs from geological screening? What additional outputs would you find useful?

Respondent skipped this question

**Question 4:** Do you have any other views on the matters presented in the draft Guidance?

Respondent skipped this question
