# 1 Introduction

## 1.1 Scope

This specification describes the children in need (CIN) census 2017 to 2018. This data collection covers all local authorities in England, who are expected to provide data on all cases and episodes for the period from 1 April 2017 to 31 March 2018.

The data consist of child-level information for those children in scope, showing their characteristics and information about their assessments. The majority of children in need will be up to 19 years old but there will be a few exceptions where children's social care are providing support to older persons. The collection covers the following groups:

- those children who are deemed to be 'in need' during the data collection period. This will include unborn children who have been identified as potential children requiring services;
- those children for whom there is a child protection plan at any time during the period;
- children who were referred to children's social care but for whom no further action is taken after initial consideration or assessment.

## 1.2 Audience and references

This document has been developed to support local authorities and their suppliers of local authority management information systems. It should be read in conjunction with:

- Common Basic Data Set (CBDS)
- [CIN 2017 to 2018 guide v1-0 – when available]
- [CIN-Census2018-v1-0.xsd – when available]
- [CIN 2017 to 2018 example census data v1-0.xml – when available]

The common basic data set (CBDS) can be accessed via the following link [common basic data set](#). This is a database comprising all levels, all modules, all data items and all code-sets within the one spreadsheet. This spreadsheet makes use of filters and hyperlinks to navigate around. The filters make it possible to view extracts of the common basic data set for use in specific collections, including CIN 2017 to 2018. All the items relating to this specification can be found by filtering on the column headed CIN census 2017 to 2018 of the data definitions worksheet in the next version.

The guide and example XML plus presentations and papers from workshops with local authorities and software suppliers, will be available electronically from the Department for Education (DfE) website at the following address: [.Gov.UK](#)

Following consultation the government's statutory guidance, [working together to safeguard children](#), has been revised and was published on 21 March 2013. The guidance came into effect from 15 April 2013.

An XSLT will be provided as a validation tool for use in management information systems. This will be sent to suppliers and is available on request.

### 1.3 Changes from the 2016 to 2017 specification

There are no significant changes for this collection from the 2016 to 2017 collection. Please note that changes to the 2016 to 2017 collection validation rules agreed via RFCs 914 and 915 are included in this specification (Annex A).

### 1.4 Definitions

**MIS:** Within this document the term MIS (management information systems) is used in a generic sense as the source system, or systems, where the data are normally maintained and from where they are exported. In most cases this will be the authority's social care electronic case management system.

**Census year:** Within this document census year always refers to the period 1 April 2017 through 31 March 2018, inclusive.

### 1.5 Important note on this version

Version 1.0 is the base-lined version of the 2017 to 2018 specification.

## **2 Assumptions**

Assumptions made in creating this specification:

- A1 Each local authority will provide a single file containing all data.**
- A2 Where appropriate the data specification has used e-Gif data standards**
- A3 The census will use COLLECT (Collections On-line for Learning, Education, Children and Teachers) as the data collection mechanism**
- A4 DfE will only accept submissions in XML format**
- A5 For most local authorities the electronic case management system will be the primary source of data**

### **3 Coverage and timings**

To achieve the above all local authorities will be required to capture the data attributes specified for the year from 1 April 2017 until 31 March 2018 inclusive. Submission of data to DfE will occur between 2 April and 31 July 2018. Local authorities will have a return loaded into Collect by 29 June 2018, however further cleaning of returns can continue until the end of July 2018.

## **4 Data standards**

It is the long-term strategy of the department to adopt the e-GIF standards to support the transfer of data across other public sector bodies and government departments. This specification has been developed with those standards in mind; where deviations occur explanation notes have been provided.

## **5 Structure and guidance**

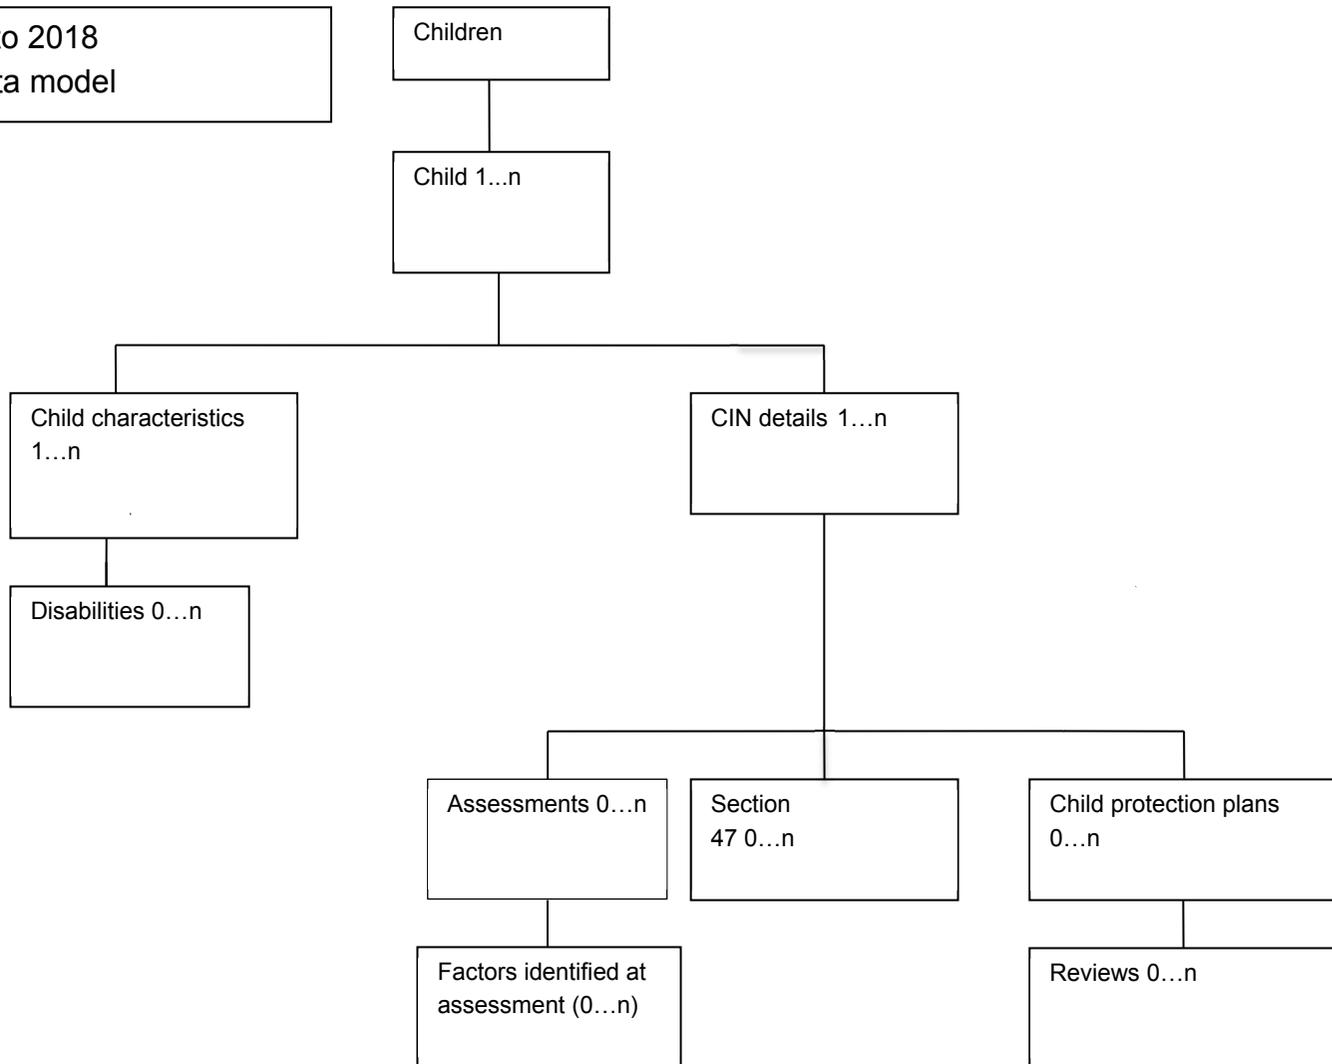

Data items have been included in the same containers (modules) as those used for CBDS and school census for consistency purposes. For example, gender conceptually belongs to the child identifiers module. So gender is one data item (amongst others) within the child identifiers module.

### **5.1 Child level**

The children in need census for 2017 to 2018 will contain the modules: child identifiers, child characteristics, children in need details, and child protection plans. Each module is described in the following paragraphs.

The number of instances of each module per child is shown in the following CIN 2017 to 2018 logical data model. (Please note that the instance numbering does not apply to the exceptions noted at 5.6).

CIN 2017 to 2018  
Logical data model

## 5.2 Child identifiers

### **Module description:**

A set of standard identifiers, required to identify children and to match children from the CIN Census to the SSDA903 return (on children looked after) and to the national pupil database.

### **Module composition:**

This contains the standard identifiers (LAchild ID, UPN, DOB and gender). The UPN (unique pupil number) should be provided as well as the LAchild ID to provide a primary and secondary key (as the UPN will not be available for some children). The LAchild ID is as defined in SSDA903 (children looked after collection). It is unique within the return from one local authority.

Where the child is under 6 years old the UPN is not required (but may be provided if available). However children of school age are expected to have a UPN. The UPN is optional for referral no further action cases. UPN unknown is optional but allows local authorities to include a reason for a missing UPN within the return preventing queries after the data has been submitted. The specification includes validation that will show a query for every instance of a missing UPN for a child 6 years old unless a UPN unknown reason is provided. Those local authorities not returning UPN unknown reason should provide a return level note to explain why UPNs are missing.

**NB: UPN unknown information remains optional on the basis of evidence gathered from the 2010 to 2011 census.**

Date of birth is mandatory for all children born before 1 April 2018 and the expected date of birth is mandatory for unborn children (see paragraph 5.6 for more details). Please note that users may wish to retain the expected date of birth on their systems, but it must not be included within the census return if the date of birth is present, see also validation rule 8525 in Annex A.

A date of death item is required (where applicable) as it shows where services continue to be provided after a child has died. The final case closure date should also be provided; this may be after the date of death if the case remains open for investigation and review procedures after the child dies.

### **Cases to include:**

Provide one record per child in scope.

## 5.3 Child characteristics

### Module description:

This module includes the child's ethnicity and disability.

### Module composition:

The ethnicity data item uses the coding specified in the CBDS (common basic data set).

Children should be reported as disabled if they are disabled under the Disability Discrimination Act 2005. Multiple disabilities should be recorded if applicable. An entry of 'none' should be recorded if the child has no disability.

Feedback in the past has been that some local authorities have had difficulty providing the specific disability type, although MI systems should more easily be able to tell whether a child has a disability or not. If this is the case for your authority, as for 2016 to 2017 collection, we will continue to allow local authorities to record all children with a disability under the code 'DDA' (other DDA). If you do this, you need to make it clear in your COLLECT notes that this has been done so we can analyse the data appropriately.

### Cases to include:

Provide one record per child.

## 5.4 CIN details

### Module description:

This module contains information on all CIN episodes open during the census year including primary need code, referral and closure dates, and source of referral.

A child can have more than one episode of need in the year. This module, therefore, must include details for each of the CIN episodes active or reviewed during the period. This includes episodes that started prior to the data collection period, but that remained open at 1 April 2017. The section on 'cases to include' below provides full rules to identify all cases in scope.

### Module composition:

For the minimum data required in this module, please see notes at the end of this section.

The data item, referral no further action, is included in this module. Where no action is taken the flag should be set to true or 1, otherwise set the flag to false or 0. Section 5.6 describes what should be included in other modules in this case.

Reason for closure code (RC8) is included for 'case closed after assessment, no further action'. This will allow local authorities correctly to categorise a case for children who they

assess, but for whom they do not provide services and whose case is closed. (This is different from cases that were closed at the referral stage when the referral no further action flag is used – see previous paragraph. Code RC8 should not be used for cases that were closed prior to assessment).

For each new referral dated 1 April 2013 onwards, the source of referral must be recorded from a 'pick list' of sources codes. Only one category may be picked from the list. Where there is more than one referral for the same child on the same day, the first referral should be recorded and it is this referral source that should be recorded for the census. Sources of subsequent referrals should be recorded separately i.e. in relation to the specific referral. The data should be returned each year the episode remains open. In future censuses we would like to collect this data only in the year the referral was made, however we will need to monitor matching rates between CIN censuses until the matching rate is good enough for this to be done.

### **5.4.1 Assessments group**

The group consists of:

- Assessment actual start date
- Assessment internal review date (optional)
- Assessment authorisation date
- Factors identified at assessment

Local authorities carrying out continuous assessments can record their data appropriately in the assessment module. Any local authorities that are still carrying out initial and core assessments will have to adapt their data to fit the data structure of one assessment module. If only an initial assessment was conducted, the date the initial assessment started should be entered as the assessment actual start date, and the date the initial assessment was authorised as the assessment authorisation date.

If both an initial and core assessment were completed, the date the initial assessment started should be entered as the assessment actual start date and the date the core assessment was authorised as the assessment authorisation date.

If only a core assessment was completed with no prior initial assessment, the date the core assessment started should be entered as the assessment actual start date and the date the core assessment was authorised as the assessment authorisation date.

The assessment actual start date must be filled in for all assessments groups. If the assessment authorisation date falls after the end of the census year, it should be left blank.

The 'factors identified at assessment' module within the assessments module, allows for multiple contributing factors to be recorded per assessment. All parental or child factors

that are known about at the end of the assessment which compromise the ability to parent, or are potential risk factors, should be recorded. This applies to all assessments completed within the 2017 to 2018 year. The information should be recorded at the end of the assessment (initial assessment, core assessment or continuous assessment depending on the local assessment protocol) and all relevant factors should be reported from the list provided.

**Note:** Assessments should be completed within 45 working days of referral. Internal review dates are optional and will be determined locally by the needs of the child and the nature and level of the harm being suffered.

### 5.4.2 Section 47 enquiries group

During section 47 enquiries an initial child protection conference, if held, should take place within 15 working days of the start of the section 47 enquiry.

The group consists of:

- Section 47 enquiry actual start date
- Initial child protection conference target date (optional)
- Date of initial child protection conference
- ICPC not required

Each section 47 group will comprise one of the following:

<p>Either <b>type 1:</b></p> <p>For a section 47 enquiry that does not lead to any further action</p>	<ul style="list-style-type: none"> <li>- the section 47 enquiry actual start date</li> <li>- the ICPC not required flag with a value of "true" or "1"</li> </ul>
<p>or <b>type 2:</b></p> <p>For a section 47 enquiry where the initial child protection conference has taken place</p>	<ul style="list-style-type: none"> <li>- the section 47 enquiry actual start date</li> <li>- the initial child protection conference target date (optional)</li> <li>- the date of initial child protection conference</li> <li>- the ICPC not required flag with a value of "false" or "0"</li> </ul>

<p><b>or type 3:</b></p> <p>For a section 47 enquiry that the ICPC has not yet taken place</p>	<ul style="list-style-type: none"> <li>- the section 47 enquiry actual start date</li> <li>- the initial child protection conference target date (optional)</li> <li>- the ICPC not required flag with a value of "false" or "0"</li> </ul>
--	---

**Note:** The initial child protection conference target date (optional data) should be 15 working days after the section 47 enquiry start date.

**Note:** In the instance type 2 above, the date of initial child protection conference should only be completed in the section 47 group and not in the instance in the CIN details module. The instance in the CIN details module should only be used when a child who is the subject of an existing child protection plan transfers into your authority (see also section 5.6).

**Cases to include:**

The principle reason for including an episode is that it is active at some point during the census year.

The return must include at least one CIN details module per child. The following episodes should be included:

- a) if the episode is open at 1 April 2017; or
- b) if the referral date occurs within the census year:

For a) and b) include referrals where no further action was taken.

The items to populate for each episode vary depending on which of the above criteria has resulted in their inclusion, see notes below.

Where criteria a) or b) above mean that an episode is included, then all the dates that allow any relevant key indicators to be calculated must be included. This means that if:

- an assessment starts and/or ends within the census period, the assessments group must be completed
- a section 47 enquiry starts and/or ends within the census period, the section 47 enquiries group must be completed, including any dates prior to 1 April 2017.

Although the above groups may include dates prior to April 2017, they must not include dates after 31 March 2018 apart from target end dates and internal review dates.

**Notes:**

Primary need code N0 was devised to distinguish children whose case is closed after assessment and no further action taken, from children in need. However, local practitioners may assign a need code to children at the start of assessment and not change it (as the closure itself would indicate the child was not a child in need). For this reason, primary need codes other than N0 (not stated) are possible for RNFA cases and the validation will check for a valid or missing code.

The department’s guidance allows for referrals to be followed by more than one assessment , or more than one section 47 enquiry. For this reason, the assessment group may repeat within the census’s data structure so that multiple instances can be included. Please note however that these activities should not overlap, i.e. a second assessment should not be started if an extant assessment is in progress. The census will validate the data provided and query any overlaps that are included.

The department’s guidance allows for variations in process. The following is therefore the minimum valid content for one instance of the CIN details module.

In each instance, a ‘referral’ is a request for services from someone not currently in receipt of services from the local authority. Do not include new information received on already open cases as a referral.

<p>either <b>option A:</b></p> <p>For a 2017 to 2018 referral that leads to further action</p>	<ul style="list-style-type: none"> <li>- the referral date</li> <li>- the primary need code</li> <li>- one assessment actual start date,</li> <li>- the referral no further action flag with a value of “false” or “0”</li> <li>- source of referral</li> </ul>
<p>or <b>option B:</b></p> <p>For a 2017 to 2018 referral that does not lead to any further action</p>	<ul style="list-style-type: none"> <li>- the referral date</li> <li>- the referral no further action flag with a value of “true” or “1”</li> <li>- source of referral</li> </ul>

**Note:** For option B, a ‘no further action’ case is only where the initial consideration of the referral means that no action is taken. This is not the same as a case that is closed following assessment. These cases should use RC8 and set referral no further action flag to “false”.

**General notes on dates:**

'Actual start dates' are the date the assessment actually started and these can be any day (working or not).

The census only asks for dates, and not times.

Referral dates and CIN closure dates can be any day (working day or not).

Some management information systems allow local authorities to record extra statutory days (ESD) as additional holidays. The DfE should be informed of any ESD so that they can be taken into account in calculations and validations. These can be regarded as non-working days and excluded from any working day calculation, as long as the ESD is implemented locally as a non-working day across the authority. In those authorities where one or both of the ESDs are taken at the choice of individual members of staff, ESDs should not be taken into account.

**Additional information on target dates:**

The return of assessment target dates is no longer required due to the removal of initial and core assessment modules. The internal review point date in the assessments module remains optional as in 2016 to 2017. Return of ICPC target date also remains optional.

The majority of local authorities will expect their MIS to calculate target dates automatically either as part of the system's workflow or as a reporting function when extracting data for the census. In calculating target dates the following points should be taken into account:

- Non-working days such as bank holidays or extra statutory days are treated the same as weekends in any working day calculation;
- Working days are evaluated as whole days. This means that the target date does not take into account the time of day on which the activity started. Close of business on the target day is the time by which the activity would be expected to be completed;
- Some target dates will fall beyond the end of the census year. These should still be included.
- Internal review date on the assessment module should be the local authority's own locally set date.

The date of the child protection conference appears twice within the XML file. In most cases the conference will be held as part of a section 47 enquiry and the data should be shown within the section 47 group and should not be included at the CIN details level. For a 'transfer in' case, the date of initial child protection conference should appear at the CIN details level only and not within the section 47 group (see 5.6D note b).

The assessment authorisation date should be the date an assessment was authorised by the team manager and this can be any day (working or not). Assessments are deemed to be completed once the assessment has been discussed with the child's family (or carers) and the team manager has viewed and authorised the assessment.

## 5.5 Child protection plans

### Module description:

This module contains information on child protection plans (CPP). A child can have one, more than one or no child protection plans, but can only have one at a time. A child not in need cannot have a CPP.

### Module composition:

a) The CPP start date, the initial and latest category of abuse, the CPP end date, plan review date, and the number of previous child protection plans.

b) The specification allows more than one plan review date to be provided. All reviews within the year should be included along with, for cases open at 1 April 2017, the last review date in 2016 to 2017. (The final review date in 2016 to 2017 is required to calculate whether all reviews in 2017 to 2018 were carried out within the required timescales.)

c) Initial category of abuse and latest category of abuse. If the case is closed, the latest category of abuse should be taken as when the case closed or if the case is ongoing, it should be as at 31 March 2018. The initial category of abuse records the assessment made at the time the plan commenced, and does not change. Both items use the same code set.

d) This module is repeatable.

### Cases to include:

This module is required where any of the following conditions apply:

- the child protection plan start date or end date fall within the census year
- the plan was already open at the start of the year, i.e. there is a child protection plan start date, even if it is outside the census year, and no child protection plan end date.
- If neither of the above applies the module may be omitted.

### Notes:

A child can have more than one CPP, but these plans should not overlap, i.e. a second CPP should not be started if an extant CPP is ongoing. The census will validate the data provided and query any overlaps that are included.

The CPR3 return included numbers of children by placement code and legal status (part B, tables 3 & 4). These items only apply to looked-after children. DFE will replicate these aggregates by matching CIN data to the SSDA903 and hence these data items are not included in the CIN census.

## 5.6 Variations

The paragraphs above describe most records within the return. Providers are asked to note the following four variations in the requirement:

**A)** For an unborn child the following requirements apply:

- applicable data are LAchild ID; expected date of birth; gender; ethnicity; CIN details (all fields); child protection plans (all fields);
- Gender should = 0 (not known/unborn);
- Ethnicity should be NOBT (information not yet obtained);
- Disability information is not required;
- Please note that it is possible that there is more than one unborn child with the same details other than the LAchild ID.

**B)** If a looked after child is adopted during the collection year and the child remains a child in need, the local authority must submit two separate unlinked records for that child.

- The first (pre-adoption) record should record the child's CIN details as they were when they were a looked after child:
  - CIN closure date will match the date of the court's adoption order;
  - Reason for closure will contain code RC1 (adopted).
- The second (post-adoption) record for that same child must contain new child identifiers:
  - A new LAchild ID;
  - A new UPN which should have been assigned to the child by the school. Do not record the child's pre-adoption UPN under former UPN;
  - Referral date will match the date of the court's adoption order.

### Notes:

**a)** if a looked after child is adopted and at that point ceases to be a child in need then the second, post-adoption record is not necessary. If a child doesn't remain in need the CIN closure date can be up to a month after the adoption date;

**b)** the second (post-adoption) record-type could continue to be provided in subsequent years, if the child continues to remain in need.

c) If a referral is received about a child, but no action is taken, then the following requirements apply:

- The Child identifiers module should contain:
  - LAchild ID;
  - Date of birth or expected date of birth;
  - Gender
- The child characteristics module should contain:
  - Child ethnicity
- One CIN details module should be supplied containing:
  - Referral date;
  - Referral no further action flag with a value of “true” or “1”.
  - Source of referral

There should be no other activities recorded in the CIN details module.

As with a referral that leads to action, if a single referral is about more than one child, then a separate record is required for each child.

d) If a child moves permanently into your authority, having been the subject of a child protection plan in another local authority (sometimes referred to as transfers in), the data requirements are:

- Apart from CIN details, all modules are required in full including details of the new CPP
- For the CIN details module, the following items only are required:
  - In all cases, referral date, primary need code, referral no further action with the value of “false” or “0”
  - If the case was closed during the census year the CIN closure date and reason for closure are also required
  - The initial ICPC date must be completed within the CIN details module, and not in the S47 module.

**Notes:**

a) The referral date should be the date on which formal notification is received from the originating local authority.

**b)** The receiving local authority should convene a child protection conference within 15 working days of being notified of the move (i.e. referral date). The date of this child protection conference should be recorded within the CIN details group and not within the section 47 group. This is to allow us to distinguish between conferences due to a child moving and other conferences.

**c)** if notification is received from another local authority of a child in need who has not been the subject of a child protection plan, then the case is treated as any other referral for the purposes of the CIN census, and information on assessments and section 47 enquires are required as described in section 5.4.

## **5.7 Summary of cases to be included**

This section provides a full summary of the inclusion criteria described above.

If a child is in scope then the child identifiers, child characteristics and children in need details modules must all be provided. A child is in scope if one or more of the following apply:

**a)** there are CIN episodes where:

- one or more of the key dates fall within the census year:
- the episode is open at start of year

**b)** the child is the subject of one or more child protection plans at any point during the year, i.e.

- the child protection plan start date or end date fall within the census year
- the plan is open, i.e. there is a child protection plan start date, even if it is outside the census year, and no child protection plan end date. This will include review dates.

(NB: if a child receives a service or is subject of a child protection plan, they must be in need for the duration of the service or plan)

**c)** the child was the subject of a referral, but after initial consideration no action was taken.

## 6 Local authority data returns

### 6.1 Data return formats

A submission file from a local authority should be provided in a XML file structure as described below. Within XML, an item or module that is omitted (e.g. UPN or child protection plan module) should not show any tags.

### 6.2 Header details

Section 6.3 describes formats for the return of the data in XML format. The data items required within the header are as follows. (The header follows the DFE standard header for data collections, although <Term> and <Estab> are omitted as not relevant to this census.)

**Collection Name** (<Collection>, 800001) will be 'CIN'; **Description: Name of the data collection, e.g. CIN.**

**Year** (<Year>, 800003) will be '2018' **Description: The year of the collection.**

**Reference Date** (<ReferenceDate>, 800004) will be '2018-03-31' **Description: The reference date is normally the day of the census or collection. It is used as the baseline date from which comparisons with other dates in the return can be made.**

**Source Level** will be 'L'; **Description: Should be set to L for a local authority system**

**LA** (<LEA>, 200001) is the LA Number. **Description: Three digit local authority number as used by education departments.**

**Software Code** (<SoftwareCode>) suppliers may use their own system name, or used a value of 'Local Authority'; **Description: Software product identification.**

**Release** (<Release>), optional free-text item which suppliers are requested to use if possible. In some cases it is useful to trace problems with returns back to specific software releases, e.g. where upgrades have been provided but not installed;

**Description: Software release number.**

**Serial No** (<SerialNo>) will start at '001' and then be incremented by 1 each time a new file is prepared for submission; **Description: An incremented number generated by a provider's software, enables data collection systems to identify re-submissions.**

**Date/Time** (<DateTime>, 800010) is the Date and Time when the file was prepared or generated in CCYY-MM-DDThh:mm:ss format; **Description: Date and time of generation of the return.**

**CBDS Level** (<CBDSLevel>) will be 'Child' **Description: Shows which of the defined CBDS levels are present within a data return.**

## 6.3 XML schema

### 6.3.1 XML format submission

An XML submission will be a single message consisting of

- a header;
- a series of repeated nodes containing data on one or more funded children

CIN census 2018 – overall message structure	
	<Message>
	<Header> - see below for details
	<Children>
	</Message>

### 6.3.2 XML header

A standard XML message header is required for each census file. The data items should be populated according to the guide in 6.2:

Children in need census 2018 - header structure	
	<Header>
	<CollectionDetails>
800001	<Collection>CIN</Collection>
800003	<Year>2018</Year>
800004	<ReferenceDate>2018-03-31</ReferenceDate>
	</CollectionDetails>
	<Source>
	<SourceLevel>L</SourceLevel>
200001	<LEA>201</LEA>
	<SoftwareCode>Local Authority</SoftwareCode>
	<Release>ver 3.1.18</Release>
	<SerialNo>001</SerialNo>
800010	<DateTime>2018-05-23T11:14:05</DateTime>
	</Source>
	<Content>
	<CBDSLevels>
	<CBDSLevel>Child</CBDSLevel>
	</CBDSLevels>

	</Content>
	</Header>

Standard CBDS header items <Term> and <Estab> are not shown above. These items are not required in this data collection and should be omitted by suppliers.

### 6.3.3 Child XML message structure

Children in need census 2018 – child XML message structure		
CBDS No	XML element	Cardinality / notes
		Note: This column contains notes on repetition. Item level elements can be assumed to occur once only, unless otherwise stated.
	<Children>	
	<Child>	Each <Children> group contains 1..n <Child> groups
	<ChildIdentifiers>	Each <Child> group contains one and only one <ChildIdentifiers> group
100379	<LAchildID>DfEX0000001</LAchildID>	
100001	<UPN> A123456789123</UPN>	
100002	<FormerUPN> X98765432123B </FormerUPN>	
100468	<UPNunknown>UN3</UPNunknown>	
100292	<PersonBirthDate>1066-03-24</PersonBirthDate>	Should complete either Date of Birth or Expected Date of Birth but not both
100380	<ExpectedPersonBirthDate>1066-04-13</ExpectedPersonBirthDate>	Should complete either Date of Birth or Expected Date of Birth but not both

Children in need census 2018 – child XML message structure		
CBDS No	XML element	Cardinality / notes
100287	<GenderCurrent>1</GenderCurrent>	
100400	<PersonDeathDate>1080-10-08</PersonDeathDate>	
	</ChildIdentifiers>	
	<ChildCharacteristics>	Each <Child> group contains one and only one <ChildCharacteristics> group
100563	<Ethnicity>WBRI</Ethnicity>	
	<Disabilities>	Each <ChildCharacteristics> group contains 0..1 <Disabilities> group <i>Note:</i> Only unborn children should have no Disabilities group
100385	<Disability>HAND</Disability>	Each <Disabilities> group contains 1..n <Disability> item. (NB: a single value of NONE appears if the child has no disabilities.
	</Disabilities>	
	</ChildCharacteristics>	
	<CINdetails>	Each <Child> group contains 1..n <CINdetails> group
100386	<CINreferralDate>1070-10-06</CINreferralDate>	
100505	<ReferralSource>1A</ReferralSource>	One and only one category
100387	<PrimaryNeedCode>N4</PrimaryNeedCode>	

Children in need census 2018 – child XML message structure		
CBDS No	XML element	Cardinality / notes
100388	<CINclosureDate>1071-02-27</CINclosureDate>	
100389	<ReasonForClosure>RC1</ReasonForClosure>	
100409	<DateOfInitialCPC>1070-12-06</DateOfInitialCPC>	Only to be used in this module for 'Transfers In'
	<Assessments>	Each <CINDetails> group contains 0..n <Assessments> groups
100529	<AssessmentActualStartDate>1070-06-03</AssessmentActualStartDate>	
100531	<AssessmentInternalReviewDate>1070-06-22</AssessmentInternalReviewDate>	
100530	<AssessmentAuthorisationDate>1071-07-18</AssessmentAuthorisationDate>	
	<FactorsIdentifiedAtAssessment>	
100582	<AssessmentFactors>2A</AssessmentFactors>	Each <FactorsIdentifiedAtAssessment> group contains 0..n <AssessmentFactors> items.
	</FactorsIdentifiedAt Assessment>	
	<Assessments>	
	<Section47>	Each <CINdetails> group contains 0..n <Section47> groups

Children in need census 2018 – child XML message structure		
CBDS No	XML element	Cardinality / notes
100499	<S47ActualStartDate>1070-06-02</S47ActualStartDate>	
100408	<InitialCPCtarget>1070-06-23</InitialCPCtarget>	
100409	<DateOfInitialCPC>1070-06-17</DateOfInitialCPC>	To be used in this module for all cases except 'Transfers In'
100410	<ICPCnotRequired>>false</ICPCnotRequired>	
	</Section47>	
100411	<ReferralNFA>>false</ReferralNFA>	
	<ChildProtectionPlans>	Each <CINdetails> group contains 0..n <ChildProtectionPlans> groups.
100395	<CPPstartDate>1070-02-17</CPPstartDate>	
100414	<CPPendDate>1071-03-14</CPPendDate>	
100412	<InitialCategoryOfAbuse>PHY</InitialCategoryOfAbuse>	
100413	<LatestCategoryOfAbuse>PHY</LatestCategoryOfAbuse>	
100397	<NumberOfPreviousCPP>10</NumberOfPreviousCPP>	
	<Reviews>	Each <ChildProtectionPlans> group contains 0..1 <Reviews> group

Children in need census 2018 – child XML message structure		
CBDS No	XML element	Cardinality / notes
100415	<CPPreviewDate>1071-02-15</CPPreviewDate>	Each <Reviews> group contains 1..n <CPPreviewDate> items.
	</Reviews>	
	</ChildProtectionPlans>	
	</CINdetails>	
	</Child>	
	</Children>	

### 6.3.4 Special notes for XML returns

The standard XML entity references should be used for the following special characters:

Character	Entity reference
Ampersand (&)	&amp;
Left Angle Bracket (<)	&lt;
Right Angle Bracket (>)	&gt;
Single Quote / Apostrophe (')	&apos;
Double Quotes ("")	&quot;

For special characters such as é use a character reference such as &#233; This produces a generic XML file which can be viewed as such in a suitable browser. Details of all such characters are found within the XML standard documentation; see for example <http://www.w3.org/TR/2004/REC-xml-20040204/>, section 2.2.

There is no naming convention for the XML file; however we recommend that the name should be meaningful to a user attempting to locate the file. Spaces in the file name are not a problem. The file extension should be .xml.

## 6.4 Data validation rules

This section specifies validation rules that are applied to the data by DFE, using COLLECT. They should also be applied, as far as possible, by local authorities prior to loading the data onto the COLLECT system and any issues resolved. Validation rules are supplied in Annex A, which is an Excel spreadsheet provided alongside the main specification. Those data items included in the tables but not appearing in the validation rules - that is, those not shown in the validation rules as "must be present" - should be supplied where available (e.g. child's UPN). The spreadsheet (Annex A) also shows which validations are errors and which ones are queries. An error is a failed validation check that must be corrected. A query is one which must be investigated, and potentially corrected, as it identifies data that would usually be invalid. Where a validation rule is identical to one that is specified for the school census or school workforce collections, the same sequence number is used. Otherwise, new sequence numbers are used.

Where an item occurs more than once for the same child suppliers must ensure that the validation checks against that item are applied to each instance. This should happen

whether the item recurs multiple times within a single module, e.g., <Disability>, or the item is within a module that may occur more than once, e.g., <CINdetails>.

Syntax:

- Validation checks are expressed as conditions that must be true (errors) or that should be true (queries). The error message shows what is displayed if the condition fails
- data items are indicated using the XML tag with the CBDS number in parentheses, for example <LAchildID> (100379)
- data groups are indicated using the XML tag only, for example <Assessments>
- single dates or date ranges are sometimes defined in relation to <ReferenceDate>, which is from the XML header
- date ranges also use [Start\_of\_Census\_Year], which is not an item within the XML, but which has a constant value for this census of 2017-04-01. If this is calculated as (<ReferenceDate> minus one year plus one day) within MIS systems, then this will future proof some of the validation, since the reference date for CIN will always be the 31 March at the end of the census year.
- date ranges also use [Period\_of\_Census], which is not an item within the XML, but which has a constant value for this census of 2017-04-01 to 2018-03-31 inclusive.
- Notes, in italics, are explanatory and non-normative.

**NB: PLEASE NOTE THERE SHOULD BE NO NEGATIVE VALUES ALLOWED**

## 6.5 Re-submission guidance

When re-submissions are required the serial number in the header must be incremented by the provider's software. We have also assumed that the whole file will be re-submitted. Note that a re-submission will delete and replace all the data contained in the previous submission.

## Version history:

V0-1	Initial QA version. Main changes are:  Dates updated all through	Alan Brooks: DDU; DfE – October 2016
V1-0	This is the base lined version of the specification	Alan Brooks: DDU; DfE – October 2016
V1-1	This version corrects the data submission date provided in section 3.	Alan Brooks: DDU; DfE – November 2016
