

Rail Trends Factsheet

Department for Transport

January 2017

About this factsheet

This factsheet provides an overview of key statistics on rail in Great Britain. The national rail statistics are for surface rail only, and do not include underground, light rail and tram systems.

Key Statistics

Rail Usage p1

Rail journeys have doubled in the last 20 years.

Passenger numbers & crowding p2

The growth in rail travel has led to more crowding into major cities.

Punctuality, safety & infrastructure p3

89.1% of trains were 'on time' in 2015-16.

There were no passenger or staff fatalities due to train accidents for the ninth year running.

Finance & freight p4

Government support to the rail industry was £4.8 billion, and train operators generated £9.3 billion of passenger revenue.

Great Britain's railways in 2015-16:¹

1.7 billion
rail journeys

64.7 billion
passenger kms

£9.3 billion of
passenger revenue

Modal comparisons

Approximately 8% of distance travelled in GB in 2015 was by rail. Of all public transport trips, in GB during 2015-16 national rail accounted for 20% of passenger journeys, and 61% of passenger km.³

Passenger distance – all modes

Note: Does not include walking

Rail usage

The number of rail journeys in the United Kingdom was the second highest in the European Union in 2014. Germany was the only country to record more with a total of 2.7 billion rail journeys.⁴

Growth in rail usage has been seen across all rail sectors in the last 20 years, but in particular for London & the South East. While this sector accounts for 48% of passenger kilometres, it makes up the majority (70%) of journeys.¹

- Over the last two decades there has been substantial growth in rail usage, and rail passenger journeys are now at their highest level since the 1920s. An average of 4.7 million journeys per day are made in Great Britain.
- The majority of growth has been in the London & South East sector, and 64% of journeys either start or end in London.

Passenger numbers & crowding

This section presents information about the number of passengers travelling into and out of major city centres in England and Wales during a typical autumn weekday in 2015, as well as levels of crowding. 'PiXC' (percentage of passengers in excess of the train's capacity) is a measure of crowding where a higher percentage indicates more crowding.

Major cities

AM peak arrivals is the number of passengers arriving into the city centre during the three hour morning peak (7-10am).

AM peak PiXC is the percentage of passengers in excess of capacity (PiXC) across the morning peak on a typical autumn weekday. A higher PiXC percentage represents a worse crowding level.²

Station Usage

Station Usage

The 10 stations with the highest number of entries and exits in Great Britain in 2015-16 (in millions):

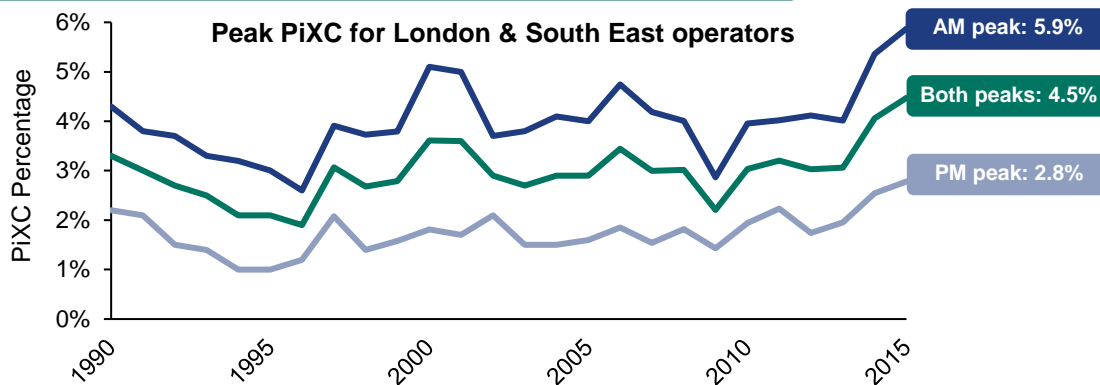

| | | |
|-----------------------|-----|------|
| WATERLOO | 99m | ↑5% |
| VICTORIA | 81m | ↓3% |
| LIVERPOOL STREET | 67m | ↑9% |
| LONDON BRIDGE | 54m | ↑12% |
| EUSTON | 42m | ↑5% |
| STRATFORD | 41m | ↑9% |
| BIRMINGHAM NEW STREET | 39m | ↑10% |
| PADDINGTON | 37m | ↑1% |
| KING'S CROSS | 33m | ↑5% |
| CLAPHAM JUNCTION | 33m | ↑8% |

Percentage changes comparable with 2014-15.

London stations make up nine of the top 10 stations in 2015-16.¹

Crowding in London & South East

The PiXC crowding measure in London over both peaks has increased to 4.5% in 2015 from 4.1% in 2014.²

Rail punctuality, safety & infrastructure

Punctuality

The Public Performance Measure (PPM) gives the percentage of trains 'on time' (i.e. within 5 minutes of the scheduled destination time, or for Long Distance services within 10 minutes).

In 2015-16, 89.1% of trains were 'on time' in Great Britain. Performance of Long Distance services remains lower than other sectors.

Following restrictions introduced in the early 2000s, PPM fell sharply across Great Britain. Although PPM recovered during the mid-2000s, it has been falling in recent years.¹

Safety

Rail has one of the lowest passenger casualty rates of any mode of transport.³

Between 2010 and 2014 the United Kingdom had the lowest number of railway fatalities per train kilometre out of the 28 European countries that submit data to the European Railways Agency.⁴

Key rail safety statistics for 2015-16:¹

For the ninth year running, there were no passenger or staff fatalities *in train accidents* in 2015-16.¹

Infrastructure

In 2015-16 in Great Britain:¹

2,557
stations

15,799 km
of route

34% of
electrified
route

24% less
carbon emissions
than in 2005-06

The average age of
rolling stock was
21 years

- While rail travel increased over the last decade, punctuality had remained relatively steady. However, in most recent years there has been a downward trend in punctuality, mainly due to bad weather and network congestion.
- Safety on the railways for passengers and workers has improved over many years and the UK now has one of the safest railways in Europe.

Rail finance, fares & freight

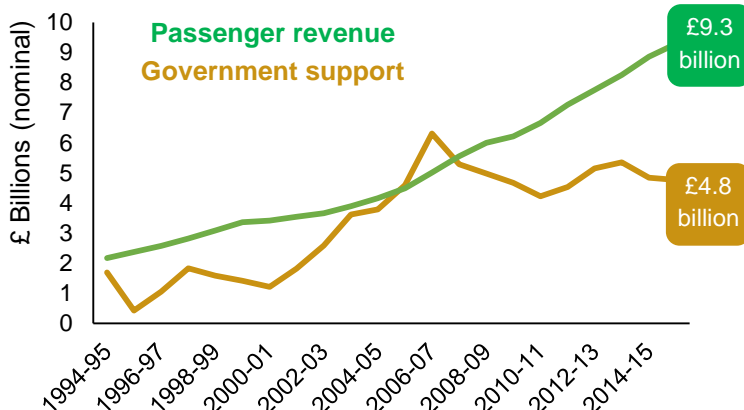

Finance

In 2015-16, Government support to the rail industry was £4.8 billion. This was mostly comprised of the £4.0 billion grant paid to Network Rail, as well as expenditure on Crossrail (£0.8 billion) and HS2 (£0.5 billion). Train operating companies paid a premium to Government of £0.8 billion.¹

Franchised passenger revenue has increased from £2.2 billion in 1994-95 to £9.3 billion in 2015-16.¹

Passenger Revenue and Government Support for rail

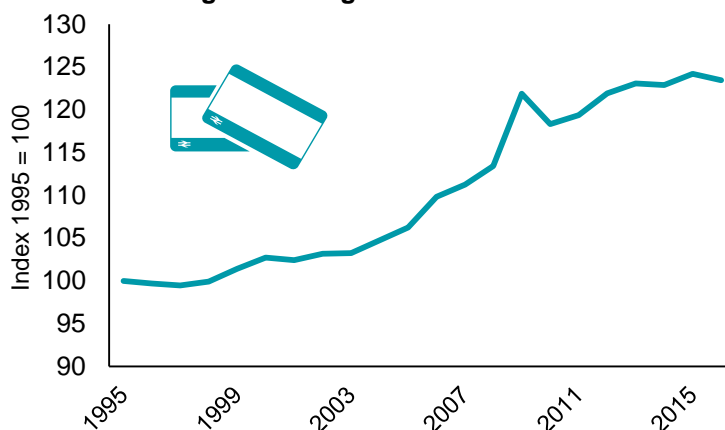

Fares

Rail fares increase each January and are based on the RPI value for the previous July.

Average rail fares have fallen by 0.6% between January 2015 and January 2016, but have increased by 23.5% between 1995 and 2016.

Since January 1995, First Class fares have risen fastest of all fares in real terms (63%) followed by Standard Class unregulated (32%) and Standard Class regulated (6%).¹

Change in average rail fares in real terms

Freight

Around 12% of all freight moved in Great Britain was by rail in 2014³. In 2015-16, freight moved by rail was 18 billion net tonne km, down 20% from 2014-15. This decrease was mainly due to a decline in the amount of coal moved, which has fallen substantially (72%) since 2005-06.¹

Coal freight moved (billion NTKMs)

- While passenger revenue has more than quadrupled in the last twenty years, in line with increases in passenger journeys, government support to the rail industry has also increased. This is through funding of major projects such as HS2 and Crossrail, and its grant to Network Rail.
- Government regulates certain rail fares, including commuter fares (in major cities), some season tickets, day singles and returns. Regulated fares have risen in real terms at a slower rate than unregulated fares.
