

National Fuels Framework

Our liquid and solid fuels agreement offers fuel products such as heating oil (kerosene), transport fuel (diesel and petrol), liquid petroleum gas (LPG) in bulk, hydrotreated vegetable oil (HVO), cylinders and biomass.

It also includes products and services associated with using solid fuels, such as greases and lubricants, tank replacement, maintenance and fuel testing.

It provides a fully compliant route to market for all types of fuels and associated services for the public sector.

This agreement allows you to complete a further competition tailored to your specific needs to find the most suitable suppliers. You can also opt to join one of the Crown Commercial Service (CCS) managed quarterly aggregated further competitions.

The framework currently services a customer base made up of 63% of the wider public sector and 37% of central government with annual spend through the agreements of around £157m.
