Introduction

Purpose

The Secretary of State has the power to require local planning authorities to provide information from their brownfield land registers in a particular format (see [regulation 18\(2\) of the Town and Country Planning \(Brownfield Land Register\) Regulations 2017](#) “the 2017 Regulations”). Local planning authorities will be able to meet the obligation to provide information in a particular format by preparing and publishing their registers in accordance with this document, therefore this document sets out the national data standard that all local planning authorities in England are encouraged to follow in preparing and publishing their brownfield land registers. The data standard has been developed collaboratively by the Department for Communities and Local Government (DCLG), [iStandUK](#) and representatives of the local planning authorities that took part in a pilot project in 2016.

It is essential that the registers published by local planning authorities are consistent and published in an open data format to ensure that they can be aggregated by users of the data.

Background

The 2017 Regulations introduced the requirement for all local planning authorities in England to prepare, maintain and publish registers of previously developed land within their area that they consider appropriate for residential development (brownfield land registers). The 2017 Regulations set out in detail the steps that local planning authorities are required to follow in preparing and publishing their brownfield land registers. Those authorities specified in [section 37 of the Planning and Compulsory Purchase Act 2004](#) “the 2004 Act” are required to publish a brownfield land register. They are: district councils, London borough councils, metropolitan district councils, county councils (in areas where there is no district council), the Broads Authority, National Park authorities and a Mayoral Development Corporation where it is the local planning authority for the purposes of Part 2 of the 2004 Act.

Brownfield land registers will ensure that standardised information and data about brownfield land that is suitable and available for residential development is kept up-to-date and made publicly available. This will provide certainty for local authorities, developers and communities and encourage investment on brownfield land. Registers will also enable the aggregation of data on brownfield land that is suitable for housing, including progress being made on getting planning permissions in place.

Brownfield land registers are also a vehicle for granting permission in principle on suitable sites helping to increase the number of planning permissions for new homes. DCLG has published [National Planning Practice Guidance](#) on GOV.UK in relation to brownfield land registers and permission in principle which should be read alongside this document.

Local planning authorities are required to publish their brownfield land registers by 31 December 2017 and to review them at least once a year.

Design Principles for the Data Standard

The data standard has been designed to ensure that brownfield land registers are accessible for those entering data and navigating the information they contain. The information will also be capable of digital analysis which can be used to gain a more comprehensive understanding about the location and capacity of brownfield land suitable for residential development.

Registers will typically be published on local authority web sites. They will be published in an 'open' format that can be read without proprietary software. Files from all local authorities will be in a consistent structure enabling information to be linked and analysed with other data. A standard approach to registering the location of data will make it possible to find, collect and analyse the data.

The standard incorporates existing good practice for designing opendata, including:

- A number of data structures recommended for use by The Local Government Association when publishing open data from local authorities. Re-using these patterns can improve the potential to join up data across themes.
- A series of recommendations from The Cabinet Office Open Standards Board on how some classes of data should be published by Government. Using these patterns makes public open data more consistent and easier to use.

The Data Standard

A spreadsheet style representation of a Register

A brownfield land register is to be published in a spreadsheet style; that is, as a file containing a series rows, where each row has a consistent set of columns.

Each row will represent a single brownfield site. Brownfield sites that are included in brownfield land registers are those that local planning authorities have assessed against the criteria in regulation 4 of the 2017 Regulations and any other relevant considerations such as the NPPF.

Part 1 and Part 2 of the Register

Part 1 of a brownfield land register will comprise all brownfield sites that a local planning authority has assessed as appropriate for residential development, having carried out any procedures such as consultation, which they consider appropriate. This will include sites with extant full planning permission, outline planning permission and permission in principle as well as sites without planning permission.

Where relevant, Part 1 of the register will consist of information entered in the columns:

- OrganisationURI
- OrganisationLabel
- SiteReference
- PreviouslyPartOf

- SiteNameAddress
- SiteplanURL
- CoordinateReferenceSystem
- GeoX
- GeoY
- Hectares
- OwnershipStatus
- Deliverable
- PlanningStatus
- PermissionType
- PermissionDate
- PlanningHistory
- ProposedForPIP
- MinNetDwellings
- NonHousingDevelopment
- SiteInformation
- Notes
- FirstAddedDate
- LastUpdatedDate

and where necessary:

- DevelopmentDescription or NetDwellingsRangeFrom and NetDwellingsRangeTo

Part 2 of a brownfield land register is a subset of Part 1. Part 2 will comprise only those sites in Part 1 that the local planning authority has decided that the land would be suitable for a grant of permission in principle for residential development.

Where relevant, Part 2 of the register will consist of further information entered in the columns:

- Part2
- NetDwellingsRangeFrom
- NetDwellingsRangeTo

and where necessary:

- NonHousingDevelopment
- HazardousSubstances
- SiteInformation

Columns in the Register

The data standard is the recommended approach for local planning authorities to adopt in order [to meet the requirements of the 2017 Regulations](#) when they are preparing and publishing their registers.

Each column defined in this section must appear in the heading, and in the correct order.

Further columns may be added, with column headings defined by the local authority, which must then appear to the right of those that are defined here.

See the later section on [Data Structures](#) for an explanation of

- Field Type
- Cardinality
- Mandatory / Optional

Column Number	1
Column Name	OrganisationURI
Field Type	URL
Cardinality	1
Mandatory / Optional?	Mandatory
Definition	To identify the Local Authority within whose area the parcel of land lies.
Validation	<p>These URIs all start with 'http://opendatacommunities.org/id/'. For example, the URI for Sedgemoor District Council is</p> <p>http://opendatacommunities.org/id/district-council/sedgemoor</p>
Notes	<p>The OrganisationURI must be selected from a list of existing URIs, provided by DCLG. iStandUK provide some guidance about how to find the right URI.</p> <p>The Local Government Association provide a simple tool to find the right URI for a local authority at http://uris.opendata.esd.org.uk/.</p> <p>This field will be repeated for every row in a register that refers to the same local authority.</p> <p>Some files may be compiled for a partnership of councils, in which case there will be more than one OrganisationURI throughout the file.</p> <p>These URIs are useful as they can be looked up to give more structured information about a local authority, including for example, the coordinates of its boundary. Using URIs in this way can give valuable information that app developers can use to provide a rich linked view of information, which is otherwise not contained in the register.</p> <p>Where land is spread across local authority boundaries, each local planning authority must enter into the register that part of land within its own boundaries, taking into account the criteria in the 2017 Regulations.</p>

Column Number	2
Column Name	OrganisationLabel
Field Type	string
Cardinality	1
Mandatory / Optional?	Mandatory
Definition	The name of the local authority that is identified using the OrganisationURI.
Validation	Up to 100 characters.
Notes	<p>This should be laid out as per the authority's preference, for example Sedgemoor District Council.</p> <p>This field will be repeated for every row in a register that refers to the same local authority.</p>

Column Number	3
Column Name	SiteReference
Field Type	string
Cardinality	1
Mandatory / Optional?	Mandatory
Definition	A reference applied by the local authority to identify a site.
Validation	Up to 50 characters.
Notes	<p>Unique to the local authority, but not necessarily nationally. This reference should be used consistently to identify the same site whilst it remains on future versions of a register.</p> <p>The reference may be reused from existing listings of sites such as the Strategic Housing Land Availability Assessment (SHLAA).</p>

	<p>If a site is known by more than one reference, perhaps across different systems, these alternative references could be listed in an additional column. The extra column could have a column heading of 'AlternativeReferences'. It may be useful to prefix a reference with some initials to identify the local source system e.g pa:1234.</p>
--	---

Column Number	4
Column Name	PreviouslyPartOf
Field Type	string
Cardinality	1
Mandatory / Optional?	Optional
Definition	The SiteReference that this site was previously a part of when reported on an earlier register.
Validation	Up to 50 characters.
Notes	<p>This field will typically be blank.</p> <p>Where an entry of land on the register is only partly permissioned, and where in the opinion of the local planning authority the remaining land should have a separate entry in the register, this field may be used to link back to the original entry.</p> <p>Using this field will promote the availability of the remaining part of the land.</p>

Column Number	5
Column Name	SiteNameAddress
Field Type	string
Cardinality	1
Mandatory / Optional?	Mandatory

Definition	The name and address of a site, which should be sufficient to describe its location.
Validation	Up to 255 characters.
Notes	<p>This is a single line of text, which is not intended to be strictly structured. i.e. no need to put street name or town in a particular part.</p> <p>Parts of the address may be separated using commas, in which case this field should be surrounded by double-quotes.</p>

Column Number	6
Column Name	SiteplanURL
Field Type	URL
Cardinality	1
Mandatory / Optional?	Mandatory

Definition	A URL to a web page giving a site plan for the site.
Validation	Web links will start with http:// or https://
Notes	<p>A good approach to this field will be a link to a GIS style web page showing the extent of the selected site, overlaid on a map. That page might also show other related information and other geographic layers such as constraints.</p> <p>It is also valid for the field to link to a static web page or document containing an image of the extent of the select site.</p> <p>It is also acceptable, but less desirable, for the field to link to a common landing page for a GIS service, where the user would then have to enter more information, such as the SiteReference, to then bring up the selected site.</p>

Column Number	7
Column Name	CoordinateReferenceSystem

Field Type	encoded list
Cardinality	1
Mandatory / Optional?	Mandatory
Definition	The Coordinate Reference System that is used for the fields 'GeoX' and 'GeoY'.
Validation	One of: <ul style="list-style-type: none"> • WGS84 • OSGB36 • ETRS89
Notes	<p>The field must contain one of the following values:</p> <ul style="list-style-type: none"> • WGS84 (see http://en.wikipedia.org/wiki/WGS84) – version of latitude and longitude. • OSGB36 (see http://en.wikipedia.org/wiki/Ordnance_Survey_National_Grid) – version of northing and easting. • ETRS89 (see https://en.wikipedia.org/wiki/European_Terrestrial_Reference_System_1989) – version of longitude and latitude. This is the coordinate reference system that is required for use with INSPIRE. <p>The Cabinet Office Open Standards Board have adopted a standard for expressing point locations in open data at</p> <p>https://www.gov.uk/government/publications/open-standards-for-government/exchange-of-location-point</p> <p>The adopted standard requires that points are expressed using the ETRS89 system, with an option to use the WGS84 system where a reduced level of precision is acceptable. Therefore, although this field has three options, local authorities should use the ETRS89 system.</p> <p>The Ordnance Survey provide a web facility to transform a batch of coordinates in OSGB36, to ETRS89, at https://www.ordnancesurvey.co.uk/gps/transformation/batch</p> <p>If a publisher wishes to also publish OSGB36 coordinates, extra columns can be added for</p> <ul style="list-style-type: none"> • Easting • Northing

Column Number	8
Column Name	GeoX
Field Type	number
Cardinality	1
Mandatory / Optional?	Mandatory
Definition	Longitude or east grid reference for the visual centroid of the site boundary.
Validation	A decimal number.
Notes	A Longitude will typically be stated to 6 decimal places of a degree. An Easting will typically be a whole number, or with up to 2 decimal places.

Column Number	9
Column Name	GeoY
Field Type	number
Cardinality	1
Mandatory / Optional?	Mandatory
Definition	Latitude or north grid reference for visual of application boundary.
Validation	A decimal number.
Notes	A Latitude will typically be stated to 6 decimal places of a degree. A Northing will typically be a whole number, or with up to 2 decimal places.

Column Number	10
Column Name	Hectares
Field Type	number
Cardinality	1
Mandatory / Optional?	Mandatory
Definition	The size of the land in hectares.
Validation	A decimal number with up to 2 decimal places.
Notes	

Column Number	11
Column Name	OwnershipStatus
Field Type	encoded list
Cardinality	1
Mandatory / Optional?	Mandatory
Definition	The ownership status of the land.
Validation	One of: <ul style="list-style-type: none"> ● owned by a public authority ● not owned by a public authority ● mixed ownership ● unknown ownership
Notes	These terms are defined in paragraph 5 of Schedule 2 to the 2017 Regulations.

Column Number	12
Column Name	Deliverable
Field Type	encoded list
Cardinality	1
Mandatory / Optional?	Optional Must be completed where relevant
Definition	To indicate if the land is 'Deliverable'.
Validation	One of: <ul style="list-style-type: none"> • yes
Notes	Where the land is 'deliverable' the value 'yes' must be selected. 'Deliverable' is defined in paragraph 5 to Schedule 2 of the 2017 Regulations as, "there is a reasonable prospect that residential development will take place on the land within 5 years beginning with the entry date".

Column Number	13
Column Name	PlanningStatus
Field Type	encoded list
Cardinality	1
Mandatory / Optional?	Mandatory
Definition	To indicate the stage, if any, that has been reached in the planning process for the site.
Validation	One of: <ul style="list-style-type: none"> • permissioned • not permissioned • pending decision
Notes	This field is helpful to monitor the progress of individual sites as they appear on

	<p>successive versions of a register, and to derive statistics.</p> <p>These terms are defined in paragraph 5 of Schedule 2 of the 2017 Regulations.</p> <p>Where part of a site is permissioned, it should be recorded as 'permissioned' here, and the Notes field used to explain why it is only partly permissioned.</p>
--	---

Column Number	14
Column Name	PermissionType
Field Type	encoded list
Cardinality	1
Mandatory / Optional?	<p>Optional</p> <p>A value must be given where the 'PlanningStatus' field contains the value 'permissioned'.</p>
Definition	The latest type of permission that has been granted on the site.
Validation	<p>One of:</p> <ul style="list-style-type: none"> ● full planning permission ● outline planning permission ● reserved matters approval ● permission in principle ● technical details consent ● planning permission granted under an order ● other
Notes	<p>These terms are defined in paragraph 5 of Schedule 2 to the 2017 Regulations.</p> <p>Where more than one permission exists for the site, identify the latest permission granted and any other permissions, including the date that such permission was granted or deemed to have been granted, in the 'Notes' column.</p> <p>'planning permission granted under an order' means planning permission granted under a local development order, a mayoral development order or a neighbourhood development order.</p>

Column Number	15
Column Name	PermissionDate
Field Type	date
Cardinality	1
Mandatory / Optional?	Optional A value must be given where the 'PlanningStatus' field contains the value 'permissioned'.
Definition	The date permission was granted for the permission set out in the field 'PermissionType'.
Validation	A valid date in the form yyyy-mm-dd.
Notes	

Column Number	16
Column Name	PlanningHistory
Field Type	URL
Cardinality	many
Mandatory / Optional?	Optional
Definition	Links to webpages giving information about the planning history of the site.
Validation	Web links will start with http:// or https://. If more than one link is given, they should be separated by the pipe character ().
Notes	Avoid links to history which is not relevant to the site in its brownfield state.

Column Number	17
Column Name	ProposedForPIP
Field Type	encoded list
Cardinality	1
Mandatory / Optional?	Optional Must be completed where relevant.
Definition	To indicate if the site has been proposed for residential development (permission in principle).
Validation	One of: <ul style="list-style-type: none"> • yes
Notes	'yes' means that the land is proposed for residential development (permission in principle). This field must be completed within 7 days of the local authority displaying a site notice under regulation 6(1) of the 2017 Regulations where - (a) land has been entered in Part 1; and, (b) first publication of Part 1, (in accordance with paragraph (2) of regulation 3 of the 2017 Regulations), has taken place.

Column Number	18
Column Name	MinNetDwellings
Field Type	number
Cardinality	1
Mandatory /	Mandatory

Optional?	
Definition	The minimum net number of dwellings that the local authority estimates the site should support.
Validation	
Notes	<p>This could be:</p> <ul style="list-style-type: none"> • the number of homes planning permission has been granted for. • the minimum number of the range expressed in NetDwellingsRangeFrom • an estimate based on a density calculation undertaken by the authority. <p>The 'minimum net number of dwellings' is defined in regulation 2 of the 2017 Regulations.</p>

Column Number	19
Column Name	DevelopmentDescription
Field Type	text
Cardinality	1
Mandatory / Optional?	<p>Optional</p> <p>Must be completed where relevant.</p>
Definition	A description of any proposed housing development.
Validation	Up to 4000 characters.
Notes	A description of any proposed housing development will need to be given here for all sites in Part 1 of the register where there are no values in the NetDwellingsRangeFrom and NetDwellingRangeTo fields. This will include sites that have planning permission for a prescribed amount of housing development. This does not include sites with a grant of Permission in principle through their inclusion on (Part 2 of the register)

Column Number	20
Column Name	NonHousingDevelopment
Field Type	text
Cardinality	1
Mandatory / Optional?	Optional. Must be completed where relevant.
Definition	A description of any proposed non-housing development
Validation	Up to 4000 characters.
Notes	<p>Must be completed for all relevant sites in Part 1 where the development includes non-housing development, and provide a description of the type, including an indication of the use of the buildings or land, and the scale of any such development.</p> <p>For the purposes of section 59 of the Town and Country Planning Act 1990, to allocate land for residential development in a brownfield land register, the register must contain a value in this field, in relation to each entry of land in Part 2 where the development includes non-housing development, and provide a description of the type, including an indication of the use of the buildings or land, and the scale of any such development.</p>

Column Number	21
Column Name	Part2
Field Type	encoded list
Cardinality	1
Mandatory / Optional?	Optional Must be completed where relevant.
Definition	To indicate that a site is in Part 2 of the register.
Validation	One of: <ul style="list-style-type: none"> • yes

Notes	<p>'yes' is to mean that the site has been allocated for residential development for the purposes of section 59A of the Town and Country Planning Act 1990 (permission in principle).</p> <p>Where land is entered in Part 2 of the register, where there is a 'yes' value in the ProposedForPiP field, this must be removed. That means, if this field is set to 'yes', the ProposedForPiP field must be blank.</p>

Column Number	22
Column Name	NetDwellingsRangeFrom
Field Type	number
Cardinality	1
Mandatory / Optional?	<p>Optional</p> <p>Must be completed where relevant.</p>
Definition	The minimum net number of dwellings which, in the authority's opinion, the land is capable of supporting.
Validation	
Notes	<p>This field must be completed for all entries in Part 1 of the register where the DevelopmentDescription field has not been completed.</p> <p>For the purposes of section 59 of the Town and Country Planning Act 1990, to allocate land for residential development in a brownfield land register, the register must contain a value in this field, in relation to each entry of land in Part 2</p> <p>The 'minimum net number of dwellings' is defined in regulation 2 of the 2017 Regulations.</p>

Column Number	23
Column Name	NetDwellingsRangeTo
Field Type	number

Cardinality	1
Mandatory / Optional?	Optional. Must be completed where relevant.
Definition	The maximum net number of dwellings which, in the authority's opinion, the land is capable of supporting.
Validation	
Notes	<p>This field must be completed for all entries in Part 1 of the register where the DevelopmentDescription field has not been completed.</p> <p>For the purposes of section 59 of the Town and Country Planning Act 1990, to allocate land for residential development in a brownfield land register, the register must contain a value in this field, in relation to each entry of land in Part 2</p> <p>The 'maximum net number of dwellings' is defined in regulation 2 of the 2017 Regulations.</p>

Column Number	24
Column Name	HazardousSubstances
Field Type	encoded list
Cardinality	1
Mandatory / Optional?	Optional Must be completed where relevant.
Definition	To indicate the presence of certain characteristics of the site.
Validation	One of: <ul style="list-style-type: none"> • yes
Notes	<p>This field is to indicate, as set out in paragraph 3 of Schedule 2 to the 2017 Regulations, the information required by regulation 26(3) of the Planning (Hazardous Substances) Regulations 2015 SI 2015/627 for sites in Part 2 of the register, that the:</p> <ul style="list-style-type: none"> • development of that land would, in the opinion of the local planning authority, be a relevant project for the purpose of regulation 26 of the Planning

	<p>(Hazardous Substances) Regulations 2015; ... and</p> <ul style="list-style-type: none"> the local planning authority is the competent authority for the purpose of that regulation. <p>Where this field has a value, use the SiteInformation field to record one or more links to the associated information.</p>
--	---

Column Number	25
Column Name	SiteInformation
Field Type	URL
Cardinality	many
Mandatory / Optional?	Optional. Must be completed where relevant.
Definition	Links to webpages giving further information about the site.
Validation	Web links will start with http:// or https://. If more than one link is given, they should be separated by the pipe character ().
Notes	Where the Indicators field includes 'hazardous substances', this field must contain one or more links to the information required by paragraph (3) of regulation 26 of the Planning (Hazardous Substances) Regulations 2015.

Column Number	26
Column Name	Notes
Field Type	text
Cardinality	1
Mandatory /	Optional

Optional?	
Definition	General information about a site and its entry on the register.
Validation	Up to 4000 characters.
Notes	<p>Information that developers might find useful, such as:</p> <ul style="list-style-type: none"> • Where permission in principle has been granted, aspects of the technical details consent application that the local planning authority would expect to see can be provided • Details of planning permissions, including the date that such permission was granted or deemed to have been granted, where more than one exists for a site • Where part of a site is permissioned, and has been recorded as 'permissioned' in the 'PlanningStatus' field, an explanation of why it is only partly permissioned can be recorded here • Any other information relevant to the development of the site

Column Number	27
Column Name	FirstAddedDate
Field Type	date
Cardinality	1
Mandatory / Optional?	Mandatory
Definition	The date that the site was first added to the register.
Validation	A valid date in the form yyyy-mm-dd.
Notes	

Column Number	28
Column Name	LastUpdatedDate

Field Type	date
Cardinality	1
Mandatory / Optional?	Mandatory
Definition	The date that information about the site was last updated.
Validation	A valid date in the form yyyy-mm-dd.
Notes	If information about the site has not been updated since first being added to the register, this should repeat the 'FirstAddedDate' field.

Data structures

The CSV file format

To meet the requirement for [3* open data](#), registers will be published in 'csv' format.

'csv' stands for 'comma separated values', which is a file format, in plain text, where

- each row is separated from the next by a new line;
- each column is separated from next by a comma.

The 'csv' format provides a way to publish spreadsheet style data which can be read by a wide range of both proprietary and open source tools.

The format is a simple text file, which could be written using a text editor such as notepad. Most popular spreadsheet or database programs have a facility to export to 'csv' format, so data is typically prepared in a spreadsheet form and exported, rather than being created and edited as a text file.

The 'csv' format is not precisely defined. We follow the advice from the Open Data Institute, and use the definitions of how to write good csv at

<http://csvlint.io/about>

Basic rules for writing csv files

Entering data into CSV format requires the user to follow basic rules, the [CSV Lint About](#) page provides the information needed for CSV.

Some key characteristics, as applied to brownfield land registers are:

- The first row is a header row that contains each of the the column names, separated by a comma. These must be exactly as specified in this document, paying particular regard to
 - upper and lower case

- underscore characters ‘_’, not to be confused with dashes ‘-’
 - no spaces
- Each row that follows the header describes a brownfield site. There must be no blank rows as spacers, and no ‘total’ rows.
 - Each field is then placed in a row, separated by a comma, so that it is in the correct sequence with the column name in the header row.
 - Where a column is defined as having Cardinality of ‘many’, a field may contain many separate values. These are then separated using the pipe (|) character. For example, the SiteInformation field can contain many references which may look like
 - `http://123456789012|http://234567890123`
 - If a field contains a comma, a line ending or a double quote, then the whole field should be enclosed in double-quotes. If the field contains a double quote, then it should be prefixed with another double quote. E.g. A field that should read as
 - “Big Ben” Clock Tower
 ... would be placed in a csv field as
 - ““Big Ben”” Clock Tower”

Types of Field

Each column definition has been given a ‘Field Type’. This table explains what each means

date	A date in the format dd/mm/yyyy.
encoded list	Encoded lists are fixed sets of labels from which you select one, to populate a field.
number	A number, which may or may not have decimal places, except where stated otherwise. Note that zero is considered as a value that is distinguished from a null (or absent) value.
string	A single line of characters.
text	One or more lines of text. Multiple lines can be delimited by carriage return and line feed characters. If these characters are used, the entire field value must be enclosed in quotes.
URL	A link to a page on a web site which should be given in full, for instance, <code>http://www.data.gov.uk</code> .

Cardinality

Each column definition has been given a 'Cardinality'. Cardinality gives the number of values that may be present in a field for one row. For this dataset, the cardinality of the fields are either

- 1 - there can be only one value in the field.
- many - there can be many values in the field.
 - where there are many values, they must be separated by the pipe (|) character.

Other data standards may have more complicated cardinality requirements, for example specifying a minimum number, and/or maximum number of occurrences for values in a field.

Mandatory / Optional?

Each column definition has been given a 'Mandatory/Optional'.

- optional - the field may be left empty, but must be included. 'Where relevant' indicates where additional information is required by Schedule 2 of the 2017 Regulations.
- mandatory - there must be a valid value in the field.

Checking that a file complies with the data standard

The publishing local authority should satisfy themselves that a file complies with the data standard, before publication.

Validation

This guidance describes how each of the fields should be completed; we have also put those rules into a schema file, which can be used at <http://csvlint.io> from the Open Data Institute, or <http://opendata.esd.org.uk/> from the Local Government Association, to validate that a data file

- is a good 'csv' file;
- has all of the right fields with valid content.

[iStandUK](#) have described the steps to take to validate a file.

Publishing the brownfield land register

Formats

As a minimum, local authorities should publish brownfield land registers in at least two formats:

- a 'csv' file, as described in this guidance;
- an INSPIRE compliant polygon format.

Local authorities may also wish to publish their data in other formats that may be more attractive to some groups of users. For example

- pdf
- html
- odf
- xlsx
- rdf

... and so on.

File Naming Convention

Brownfield land register files in all formats should be published with a name using the guidance below to construct a filename in the following form

{publisher name}_brownfieldregister_{effective date}_rev{revision number}.{format}

<p>publisher name</p>	<p>The name of the local authority publishing the register.</p> <p>The publisher name should be taken from the label associated with the URI that is used with the field 'OrganisationURI'. That label can easily be found by looking up the OrganisationURI on the web, so for example, looking up</p> <p>http://opendatacommunities.org/doc/district-council/sedgemoor</p> <p>... shows the label 'Sedgemoor'</p> <p>The publisher name should use that label converted to lowercase, and with any spaces removed.</p> <p>Using name from a list will help DCLG to monitor that all files have been published.</p>
<p>Effective date</p>	<p>In the format, yyyy-mm-dd.</p> <p>For example, to represent 31st December 2017, use 2017-12-31.</p> <p>This is the effective date of the contents of the register – this could be the date that a committee agreed to the publication of a register or the date the register was updated.</p>
<p>Revision Number</p>	<p>The initial publication of a register for an 'effective date' will always have a 'revision number' of 1.</p> <p>If a file has been published, and then subsequently amended or corrected, it can be re-issued, with the same 'effective date' and with an incremented revision number.</p> <p>When a file is published for a later effective date, the revision number will revert to 1.</p>

Format	<p>At least one rendition of a register must be in 'csv' format, and therefore the filename should have the suffix:</p> <ul style="list-style-type: none"> • csv <p>A council may also wish to publish data in many formats for example</p> <ul style="list-style-type: none"> • pdf • html • odf • xlsx <p>... and so on.</p>
--------	---

An example of a typical file name is `sedgemoor_brownfieldregister_2017-12-31_rev1.csv`

The following guidance will be helpful in naming your file:

- case - the filename should be in lowercase
- underscores - the elements of the file name are separated by underscores and should not be mixed with dashes, but note that the date has dashes in it.
- spaces - there should be no spaces on the filename

Publishing to the Web

Local authorities will make their own arrangements to publish their data to the web, which will typically be to their own web site, or an open data portal.

DCLG intend to 'harvest' each local authority's register from data.gov.uk and aggregate into a single file, but this will not be published as a national register.

Registering the location of files so that they can be discovered.

Local authorities should register the location of their brownfield land register files at data.gov.uk, specifying this data standard as the schema. This will enable DCLG, and others, to 'harvest' each file from every local authority.

Publishers should use the 'ordering' feature at data.gov.uk, to make sure that the latest file is always in position 0. This will provide a stable link to always get the latest file.

The features, and design, of data.gov.uk are currently being refreshed. [iStandUK](#) have described the steps to register a brownfield land register file, and how that relates to INSPIRE.

Licensing

The Ordnance Survey Presumption to Publish

The Ordnance Survey have reviewed the data requirement for brownfield land registers, and conclude that, where data provided under the 'Public Sector Mapping Agreement' has been used, the publication meets their '[Presumption to Publish](#)' criteria. Therefore, as long some simple terms are followed, local authorities can publish this brownfield land register data under the Open Government Licence.

<http://www.nationalarchives.gov.uk/doc/open-government-licence/version/3/>

Each Local Authority should notify the Ordnance Survey that they are publishing brownfield land register data, which can be done using a link on the page at

<https://www.ordnancesurvey.co.uk/business-and-government/help-and-support/public-sector/guidance/presumption-to-publish-criteria.html>

The Open Government Licence

When publishing the brownfield land register data, the web pages where the data can be downloaded from will need to reference the Open Government Licence and contain the right acknowledgements.

Further information

Please address any queries about brownfield registers and permission in principle to:
brownfieldregistersandpermissioninprinciple@communities.gsi.gov.uk

Annex 1: Sample data

Brownfield Land Register Part 1 Example

This example shows a single row of fictitious data for an entry in Part 1 of a brownfield land register. Here, it is laid out down the page, but in reality, the csv format would represent this as a header row and a data row.

Header row column name	Data row example data	Points to note.
OrganisationURI	http://opendatacommunities.org/id/district-council/examplecouncil	
OrganisationLabel	Example District Council	
SiteReference	B123	
PreviouslyPartOf		
SiteNameAddress	"Land at rear of High Street, Test Town"	As this contains a comma, the field is surrounded by double-quotes.
SiteplanURL	http://www.example.gov.uk/siteview.html?siteref=B123	Illustrating how a deep link might be given to present a brownfield site map in a GIS style web page.
CoordinateReferenceSystem	ETRS89	
GeoX	7.300345	
GeoY	49.958888	
Hectares	5.25	
OwnershipStatus	owned by a public authority	Must use one of the permitted values for this field.
Deliverable	yes	Must use one of the permitted values for this field.
PlanningStatus	permissioned	Must use one of the permitted values for this field.
PermissionType	outline planning permission	This field must have a value when 'PlanningStatus' is set to 'permissioned'. Must use one of the permitted values for this field.
PermissionDate	2017-12-01	This field must have a value when 'PlanningStatus' is set to 'permissioned'.

		Must be in the form yyyy-mm-dd.
PlanningHistory	http://www.example.gov.uk/planning/applications?appref=abc123	
ProposedForPIP		
MinNetDwellings	50	
DevelopmentDescription	<p>“Erection of 25, two-storey two bedroom semi-detached houses.</p> <p>1 block containing 25 x one bedroom flats.</p> <p>Change of class from Sui generis to C3”</p>	As this information contains a new line, it is surrounded by double-quotes.
