

Energy Flow Chart 2011

This chart updates the last energy flow chart which showed data for 2010. It is based on statistics taken from the Digest of United Kingdom Energy Statistics 2012, Table 1.1 – Energy Balance 2011. The flow chart is a simplification of these figures, illustrating the flow of primary fuels from the point at which they become available from home production or imports (on the left) to their eventual final uses (on the right). They are shown in their original state and after being converted into different kinds of energy by the secondary fuel producers. The flows are measured in million tonnes of oil equivalent, with the widths of the bands approximately proportional to the size of the flow they represent.

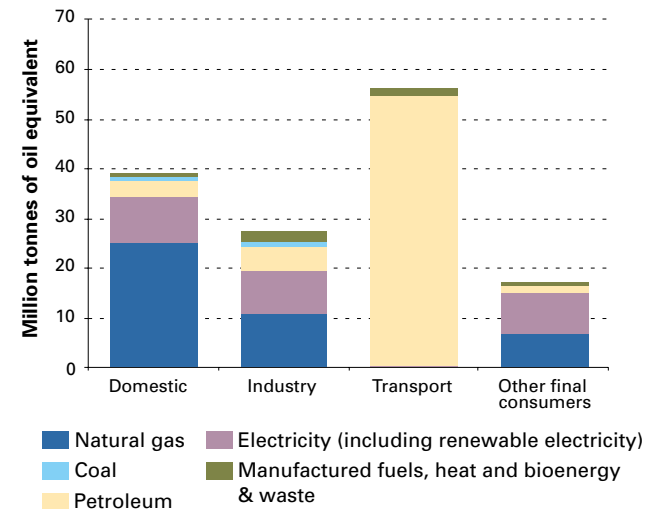

In 2011 indigenous production and imports totalled 299.2 million tonnes of oil equivalent. Just under 29 per cent of this energy was exported or used in marine bunkers. A further 16 per cent was lost in converting primary energy into electricity and other energy products, with just under 6 per cent taken up by energy industry own use and through distribution losses. Final consumption of energy, including non-energy use, accounted for 147.0 million tonnes of oil equivalent.

Indigenous production and imports in 2011

Final consumption, including non-energy use, at 147.0 million tonnes of oil equivalent in 2011 was 11.6 million tonnes lower than final consumption in 2010. The transport sector consumed 37½ per cent of all of the energy consumed in the UK while the domestic and industrial sectors accounted for 26½ per cent and 18½ per cent respectively.

Final energy consumption in 2011

More detailed flow charts are available by fuel at www.decc.gov.uk/en/content/cms/statistics/publications/dukes/dukes.aspx (see Annex H).

Digest of UK Energy Statistics

- An annual publication which includes tables, charts and commentary covering all the major aspects of energy, it provides a detailed and comprehensive picture of fuel production and consumption during the last three years.
- The Digest is also available on the Internet. This includes some additional information including data (available in MS Excel format) from earlier years which are not contained in the printed copy publication.

Available from The Stationery Office (0870 600 5522) or www.decc.gov.uk/en/content/cms/statistics/publications/dukes/dukes.aspx

UK Energy Sector Indicators

- An annual internet only publication containing numerous charts designed to show the extent to which secure, diverse and sustainable supplies of energy to UK businesses and consumers, at competitive prices, are ensured.

Statistical information is available in MS Excel format.

www.decc.gov.uk/en/content/cms/statistics/publications/indicators/indicators.aspx

Statistics by Energy Source in MS Excel format

- DECC posts Energy statistical information on a monthly, quarterly and annual basis by energy source. All of these statistics are produced in MS Excel format

www.decc.gov.uk/en/content/cms/statistics/energy_stats/source/source.aspx

UK Energy in Brief

- An annual publication summarising the latest statistics on energy production, consumption, prices and climate change in the UK.

Available free from DECC (0300 068 5056). www.decc.gov.uk/en/content/cms/statistics/publications/brief/brief.aspx

Energy Trends

- A quarterly publication which includes tables, charts and commentary covering all the major aspects of energy, it provides a comprehensive picture of energy production and use.

Available on subscription (together with Quarterly Energy Prices) from DECC (0300 068 5056). www.decc.gov.uk/en/content/cms/statistics/publications/trends/trends.aspx

Quarterly Energy Prices

- A quarterly publication containing tables, charts and commentary, covering energy prices to domestic and industrial consumers for all the major fuels, as well as presenting comparisons of fuel prices in the European Union and G7 countries.

Available on subscription (together with Energy Trends) from DECC (0300 068 5056). www.decc.gov.uk/en/content/cms/statistics/publications/prices/prices.aspx

Energy Consumption in the United Kingdom

- An annual internet only publication which brings together statistics from a variety of sources to produce a comprehensive review of energy consumption and changes in efficiency, intensity and output since the 1970s, with a particular focus on trends since 1990.

Statistical information is available in MS Excel format.

www.decc.gov.uk/en/content/cms/statistics/publications/ecuk/ecuk.aspx

Sub-National Energy Consumption

- DECC has developed a suite of regional and local area datasets covering electricity, gas, road transport fuels, residual fuels and total energy consumption. All of these statistics are produced in MS Excel format

www.decc.gov.uk/en/content/cms/statistics/energy_stats/regional/regional.aspx

National Energy Efficiency Data-framework (NEED)

- DECC has constructed a National Energy Efficiency Data-framework to enable detailed statistical analysis of energy efficiency. The data framework matches the gas and electricity consumption data collected for DECC sub-national energy consumption statistics and records of energy efficiency measures in the Homes Energy Efficiency Database (HEED) run by the Energy Saving Trust (EST), as well as typographic data about dwellings and households.

www.decc.gov.uk/en/content/cms/statistics/energy_stats/en_effic_stats/need.aspx

Annual Report on Fuel Poverty Statistics

- An annual internet only report, published separately from the UK Fuel Poverty Strategy Annual Progress Report, detailing the latest statistics on fuel poverty.

www.decc.gov.uk/en/content/cms/statistics/fuelpov_stats/fuelpov_stats.aspx

Climate Change

- DECC publishes annual UK emissions statistics both at national and local authority level.

Statistical information is available in MS Excel format.

www.decc.gov.uk/en/content/cms/statistics/climate_stats/gg_emissions/uk_emissions/uk_emissions.aspx

Statutory Security of Supply Report

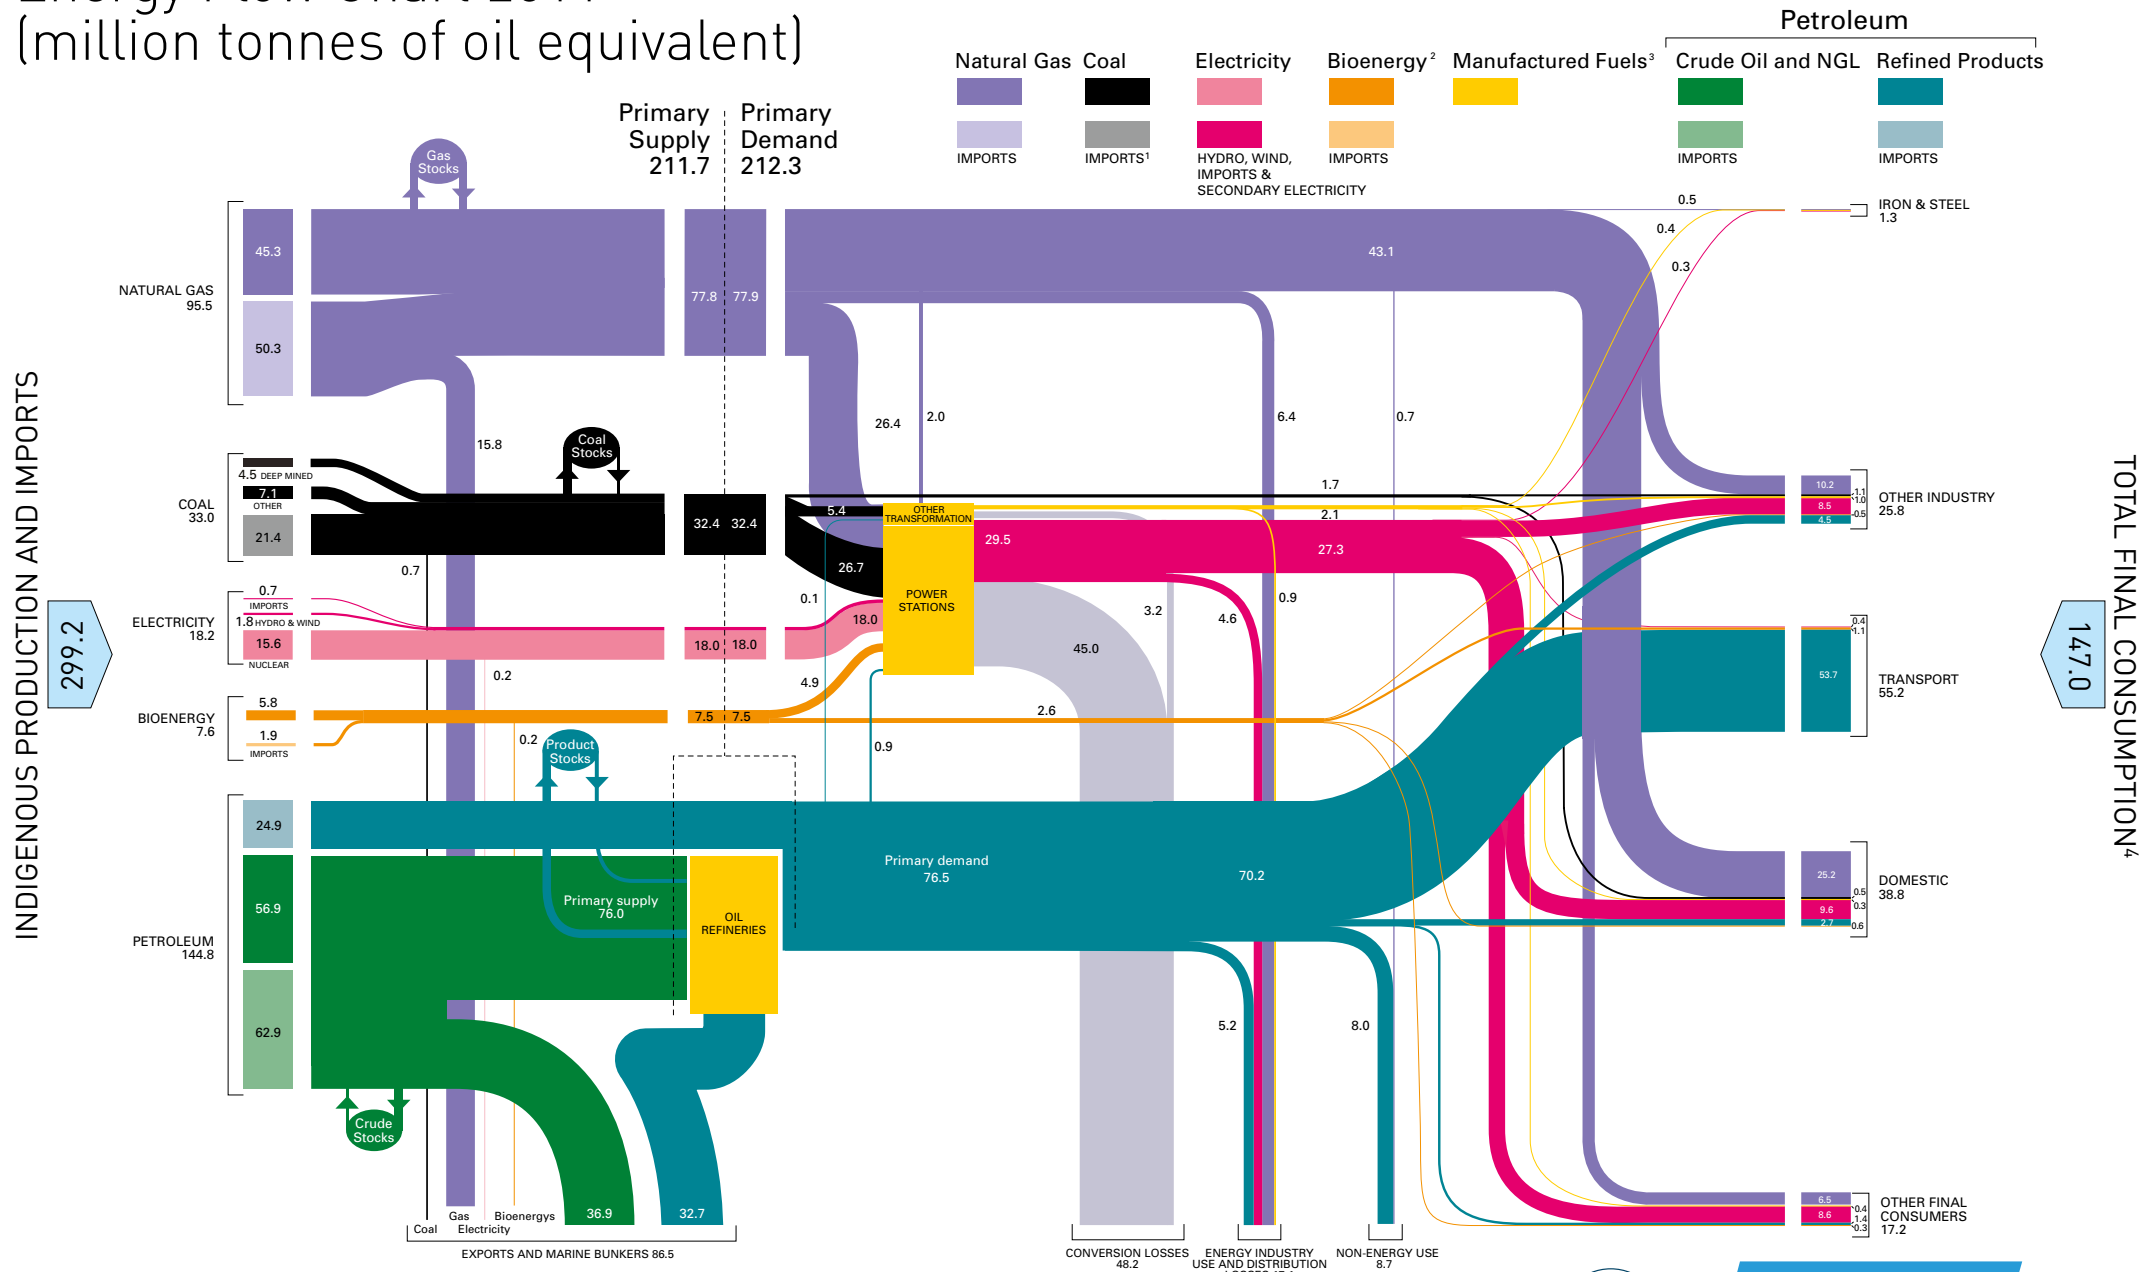

- An internet only report, the successor to the Energy Markets Outlook Report, which sets down technical information on security of supply

www.decc.gov.uk/en/content/cms/meeting_energy/en_security/sec_supply_rep/sec_supply_rep.aspx

Energy Flow Chart 2011 (million tonnes of oil equivalent)

FOOTNOTES:
 1. Coal imports include imports of manufactured fuels, which accounted for 0.03 million tonnes of oil equivalent in 2011.
 2. Bioenergy is renewable energy made from material of recent biological origin derived from plant or animal matter, known as biomass.
 3. Includes heat sold.
 4. Includes non-energy use.
 This flowchart has been produced using the style of balance and figures in the 2012 Digest of UK Energy Statistics, Table 1.1.
