Key messages

Acute respiratory infection attendances remained stable during week 9 (figure 8). There was an increase in the ED ‘impact of cold weather’ indicator from 28/2 - 2/3/18, in line with recent severe cold weather, however attendances have now returned to expected levels (figure 22).

Five EDs have recently stopped reporting to EDSSS. All reporting through the current EDSSS infrastructure will change from 1 April when EDSSS reporting will be through a new, national route, following the introduction of the Emergency Care Data Set: https://www.england.nhs.uk/ourwork/tsd/ec-data-set/. Further updates will be provided.

A Cold Watch System operates in England from 1 November to 31 March each year. As part of the Public Health England Cold Weather Plan for England the PHE Real-time Syndromic Surveillance team will be monitoring the impact of cold weather on syndromic surveillance data during this period.

Cold weather alert level (current reporting week): Level 3 Severe weather action
http://www.metoffice.gov.uk/weather/uk/coldweatheralert/

Diagnostic indicators at a glance:
Further details on the syndromic indicators reported can be found on page 10.
1: Total attendances.
Daily number of total attendances recorded across the EDSSS network.

2: Daily attendances by age: Numbers.
Daily number of total attendances, by age group, recorded across the EDSSS network.

3: Daily attendances by age: Percentages.
Daily percentage of total attendances by age group, recorded across the EDSSS network.
4: Triage category: severity of illness.

Triage category is assigned according to the clinical priority of each presenting patient.

Includes 28/28 EDs.

5: Triage category severity ratio.

The ratio of patients classified as very urgent or urgent to those classified as standard or non-urgent.

Includes 28/28 EDs.

6: Triage presentation.

Triage presentation indicators are based on the triage descriptors recorded in each ED. Data are displayed as the number of attendances recorded with triage information.

Includes 16/28 EDs which report standard terms, not using free text.
7: Respiratory. 
Daily percentage of all attendances recorded as respiratory attendances across the EDSSS network.

Includes 28/28 EDs.

8: Acute Respiratory Infection. 
Daily percentage of all attendances recorded as acute respiratory infection attendances across the EDSSS network.

Includes 14/28 EDs.

9: Acute Respiratory Infection by age group.
7 day moving average of ARI attendances presented as a proportion of the attendances within each age group.

Includes 14/28 EDs.
10: Bronchitis/ Bronchiolitis.
Daily percentage of all attendances recorded as bronchitis/ bronchiolitis attendances across the EDSSS network.
Includes 14/28 EDs.

11: Bronchitis/ Bronchiolitis by age group
7 day moving average of bronchitis/ bronchiolitis attendances presented as a proportion of the attendances within each age group.
Includes 14/28 EDs.

12: Influenza-like Illness.
Daily percentage of all attendances recorded as influenza-like illness attendances across the EDSSS network.
Includes 14/28 EDs.
13: Pneumonia.
Daily percentage of all attendances recorded as pneumonia attendances across the EDSSS network.

Includes 14/28 EDs.

14: Pneumonia by age group.
7 day moving average of pneumonia attendances presented as a proportion of the attendances within each age group.

Includes 14/28 EDs.
15: Asthma/Wheeze/ Difficulty Breathing.
Daily percentage of all attendances recorded as asthma/wheeze/difficulty breathing attendances across the EDSSS network.
Includes 19/33 EDs.

16: Asthma/Wheeze/ Difficulty Breathing by age group.
7 day moving average of asthma/wheeze/difficulty breathing attendances presented as a proportion of the attendances within each age group.
Includes 19/33 EDs.
17: Gastrointestinal
Daily percentage of all attendances recorded as gastrointestinal attendances across the EDSSS network.
Includes 33/33 EDs.

18: Gastroenteritis
Daily percentage of all attendances recorded as gastroenteritis attendances across the EDSSS network.
Includes 19/33 EDs.

19: Gastroenteritis by age group.
7 day moving average of gastroenteritis attendances presented as a proportion of the attendances within each age group.
Includes 19/33 EDs.
20: Cardiac.
Daily percentage of all attendances recorded as cardiac attendances across the EDSSS network.
Includes 28/28 EDs.

21: Myocardial Ischaemia.
Daily percentage of all attendances recorded as myocardial ischaemia attendances across the EDSSS network.
Includes 14/28 EDs.

Daily percentage of female attendances recorded as ‘fracture of the femur/wrist/forearm plus cold specific diagnoses of hypothermia and other diagnoses recorded in the EDs as ‘effects of reduced temperature’, across the EDSSS network.
Includes 20/33 EDs.
During July/August 2016 there were changes in clinical working practices at selected EDs which may impact on coding, and therefore the graphs/data presented in this report. Where appropriate, caveats will be included.

Participating Hospital Emergency Departments (EDs) report to EDSSS through the automated daily transfer of anonymised data to PHE, for analysis and interpretation by the PHE Real-time Syndromic Surveillance Team (ReSST).

Several EDSSS contributing departments are now using the new RCEM Unified Diagnostic Dataset (UDDA) to record diagnoses. Where UDDA is in place the ICD-10 or Snomed CT code is extracted for EDSSS reporting.

The syndromic indicators presented in this bulletin are based on the WHO recommendations for syndromes to be used for mass gatherings. Each code system has been mapped to the syndromes described:

- **Level 1**: Broad, generic indicator, available using all ED coding systems reported.
- **Level 2**: More specific indicator, available from EDs using ICD-10 and Snomed CT.
- **Level 3**: Very specific indicator, available from EDs using ICD-10 and Snomed CT.

**Respiratory:**
- All respiratory diseases and conditions (infectious and non-infectious).
- **Acute Respiratory Infections (ARI):** All acute infectious respiratory diseases.
- **Asthma/Wheeze/Difficulty Breathing:** As indicated by title, including dyspnoea & stridor.
- **Bronchitis/ Bronchiolitis:** As indicated by title (excluding ‘chronic’).
- **Influenza-like Illness (ILI):** As indicated by title.
- **Pneumonia:** As indicated by title.

**Cardiac:**
- All cardiac conditions (including ‘chest pain’).
- **Myocardial Ischaemia:** All ischaemic heart disease.

**Gastrointestinal:**
- All gastrointestinal diseases and conditions (infectious and non-infectious).
- **Gastroenteritis:** All infectious gastrointestinal diseases.

**Other (chart only presented when a public health need):**
- **Meningitis:** All cause meningitis (exc. meningococcal disease with no mention of meningitis).
- **Heat/ sunstroke:** As indicated by title.

Details on diagnosis are not consistently recorded for all ED attendances and the levels of attendances coded vary considerably between each ED.

Where the diagnosis codes used in an individual ED cannot be matched to level 2 and 3 syndromic indicators, the ED is excluded from the analysis of those indicators.

If you are interested in joining the EDSSS please contact ReSST using the details below.

We are grateful to the clinicians in each ED and other staff within each Trust for their help and continued involvement in the EDSSS.

We thank L2S2 Ltd for undertaking the daily extraction and transfer of anonymised attendance data from all participating EDs.

We thank EMIS Health for facilitating data extraction at the relevant EDSSS sites.
