The Office for Standards in Education, Children's Services and Skills (Ofsted) regulates and inspects to achieve excellence in the care of children and young people, and in education and skills for learners of all ages. It regulates and inspects childcare and children's social care, and inspects the Children and Family Court Advisory and Support Service (Cafcass), schools, colleges, initial teacher training, further education and skills, adult and community learning, and education and training in prisons and other secure establishments. It assesses council children’s services, and inspects services for looked after children, safeguarding and child protection.

Introduction

1. This paper contains methodology and quality information relevant to Ofsted’s official statistics release of maintained schools and academies inspections and outcomes data, which is published three times per year. These releases can be found at the following webpage:

2. This official statistics release reports on the outcomes of maintained schools\textsuperscript{1} inspections that were conducted within the most recent reporting period. This release also includes the most recent inspection outcomes for all schools that are open and have been inspected, as at the end of the period. This report covers all maintained schools and academies within England.

3. These official statistics are released to inform government and the public about the quality of schools in England, provide an evidence base for policymaking and to promote improvement across the school sector. The users of these official statistics include the Department for Education (DfE), local authorities, multi-academy trusts, academics and the voluntary sector (non-for profit organisations).

4. This methodology and quality report should be read in conjunction with the notes contained within the statistical first release, as those notes will include helpful information that is not in this report.

Methodology

5. Data in this official statistics series is from inspections conducted under sections 5 and 8 of the Education Act 2005\textsuperscript{2}. Further detail on the dates of inspections included can be found within the release. If an inspection report is not published by the cut-off date given in the release then the previous inspection will be reported as a school’s most recent inspection where applicable. Data will be presented and analysed in two ways:

   - inspections that have occurred within the academic year being reported where published by the given date
   - the most recent inspection outcome of all open schools as at the end of the reporting period including those schools that have yet to be inspected for the first time

6. For official statistics, data on inspection outcomes are collected one month after the end of the reporting period. This helps to ensure that the vast

\textsuperscript{1} Please see the glossary for a definition of maintained schools
\textsuperscript{2} www.legislation.gov.uk/ukpga/2005/18/contents
The majority of inspections undertaken within the reporting period are published and reflected within the official statistics. This is done to minimise bias. For instance, inspection reports of those schools judged inadequate undergo additional moderation checks, and may otherwise miss a shorter reporting period.

7. Under exceptional circumstances, Ofsted may withhold/withdraw publication of an inspection report. Outcomes of withheld/withdrawn inspection reports are not included in any of the datasets. If this is the case, these are highlighted with footnotes throughout the report.

8. Warning notice data is included in the school level data for any local authority maintained school receiving a warning notice from a local authority³ and for any academy receiving a warning notice from the Secretary of State for Education⁴ during the academic year being reported on. Pre-warning notices given to academies are not included. Any warning notices given by local authorities that are currently under appeal or have been withdrawn have not been included.

9. Where statements are made about whether inspection outcomes have declined or improved, they are referring to the most recent inspection outcome compared to those of the previous inspection outcome. Where a school remains the same grade, for transparency, we also include all short inspections which did not convert, as they have confirmed the grade of the previous full inspection.

10. Data in this release is also used to update an interactive Ofsted webtool (DataView⁵).

11. Schools are included within most recent inspection outcomes if they were open on the final day of the reporting period, or if they closed on that day and they have been inspected.

12. In September 2015, Ofsted introduced short inspections (please see glossary for further explanation). Where a short inspection converts to a full section 5 inspection, the outcome is reported within the outcomes for full inspections. Additional tables have also been added to the release to show the volumes of short inspections, the proportion that converted to full inspections, and the resulting inspection outcomes.

---

Phases of education

13. Ofsted reports on various phases of education, which include different types of establishment.

- Nursery schools include local authority maintained nursery schools.
- Primary schools include converter academies, sponsor-led academies, free schools and local authority maintained primary schools. These include some middle schools that have been deemed to be primary schools because the majority of pupils are primary-age children.
- Secondary schools include converter academies, sponsor-led academies, free schools, studio schools, city technology colleges, university technical colleges and local authority maintained secondary schools. These include some middle schools, which have been deemed to be secondary schools because the majority of pupils are secondary-age children. This category also includes all-through schools (usually catering for children aged between 3 and 19).
- Special schools include converter academies, sponsor-led academies free school special schools and local authority maintained special schools. It also includes non-maintained special schools inspected under section 5 of the Education Act 2005.
- Pupil referral units include alternative provision academies (converter, sponsor-led and free schools) and local authority maintained pupil referral units.

14. Early years provision in schools may require separate registration on Ofsted’s Early Years Register. This will be the case for provision in state-funded schools where it is not governed by the school or it provides care for children under three. Where this provision is not on the Early Years Register, it will be inspected as part of the section 5 inspection and outcomes are included in the schools statistical release. Early years registered provisions will be subject to an Ofsted early years inspection and included in the Early Years statistical release. For information on registered early years provision inspections please refer to the official statistics for early years and childcare at:

15. The welfare provision for boarding and residential special schools is inspected at the same time as the section 5 inspection of education provision, where possible. Inspections of this type are referred to as integrated inspections. Documents relating to the inspection of boarding and residential provision in schools can be found at:

Issues affecting comparability

16. Ofsted takes a proportionate approach to inspection. For example, the proportion of good schools that are inspected each year is smaller than the proportion of all good schools nationally. In addition, primary and secondary schools judged outstanding for overall effectiveness at their most recent previous inspection are exempt from further routine inspection. More information about this can be found in the coherence and comparability section of the quality report below.

17. Changes in inspection frameworks and policy over time may impact upon these statistics. These include policies related to schools becoming academies. Further information on this can be found within the comparability section of the quality report below.

Recent changes

18. In November 2017, Ofsted consulted on proposals to change to the way we compile data on schools’ most recent inspections. Respondents supported these proposals. Based on these findings, we will make all of the changes proposed as part of the consultation. These will be applied in the next official statistics publication in June 2018. The full response can be found at:

19. A more supportive and collaborative approach to short inspections of good schools was published in December 2017 following a consultation in September 2017. A summary of the new arrangements for short inspections from January 2018 can be found at:

20. In September 2015 Ofsted introduced a common inspection framework for all early years settings on the Early Years Register, maintained schools and academies, non-association independent schools and further education and skills providers. The common inspection framework can be found at:

Revisions

21. Revisions to the data are published in line with Ofsted’s revisions policy for official statistics. For more information about the policy please visit the Ofsted website:
Quality

Relevance

22. Ofsted regulates and inspects to achieve excellence in the care of children and young people, and in education and skills for learners of all ages. These official statistics are released to inform government and the public about the quality of schools in England, provide an evidence base for policymaking and to promote improvement across the school sector.

23. Maintained schools and academies are inspected in accordance with sections 5 or 8 of the Education Act 2005 (as amended), which can be found here:

24. The common inspection framework was launched on 1 September 2015. Under this framework, schools are judged as outstanding, good, requires improvement or inadequate (either having serious weaknesses or requiring special measures). The common inspection framework can be found here:

25. These official statistics are the aggregates of judgements made on individual school inspections. By aggregating the judgements made and showing these as proportions of the total number of inspections, we can identify messages from the data. We analyse the data in different ways, for example by region or by phase of school, to identify important differences, patterns and trends. The official statistics release draws out the key messages and communicates these in an understandable way, which is appropriate for a wide range of different users. Users are able to interpret and manipulate the data published for their own purposes. The users of these official statistics include the Department for Education (DfE), local authorities, multi-academy trusts, academics and the voluntary sector (non-for profit organisations).

26. More specifically, information found within this release is used in a variety of ways:

- Media outlets use the key findings from our statistical release to inform the public about the quality of schools across the country and in particular local areas.

- This data allows users to track movement in the education sector and monitor the quality of provision available at a national and local level and across provider types.
This accurate picture of the provision influences policy decisions about the location and quality of school provision.

This data helps identify areas of weak performance. This informs policy development within DfE, local authorities and multi-academy trusts to address issues and implement strategies to mitigate them.

Within Ofsted, inspection profiles inform inspection framework development and underpin policies to improve standards. The key messages within the official statistics contribute towards the findings in Ofsted’s Annual Report to Parliament.

27. The data included in the release is generated by Ofsted’s regulation and inspection process and is therefore administrative data.

**Meeting user needs**

28. These official statistics are regularly reviewed to ensure that they meet users needs. This has included running several public consultations in the last few years.

29. In November 2017, Ofsted consulted on proposals to change the way we compile data on schools’ most recent inspections. Respondents supported these proposals. Based on these findings, we will make all of the changes proposed as part of the consultation. These will be applied in the next official statistics publication in June 2018. The full response can be found at:

30. Previously, in August 2015, we also published the results of an earlier consultation on this official statistics release. Documents relating to this consultation, which includes a list of resulting changes, can be found here:

31. Since then a small number of additional tables and fields have been added to the release to reflect the changes made to inspections in September 2015. These provide information on short inspections as well as the new judgements introduced as part of the common inspection framework.

32. In 2016, the National Statistician published new guidance covering management information and official statistics. This guidance can be accessed here:
33. Ofsted welcomes feedback about its statistical releases. If you have any comments, questions or suggestions, please contact the Schools Data and Analysis team at inspectioninsight@ofsted.gov.uk.

**Coherence and comparability**

34. The tables and charts within the release compare inspection outcomes over the past several years. There have been a number of framework changes since the first release of statistics and these have been reflected in the publications. The overall effectiveness judgement has remained comparable across the different frameworks. Other judgements are, where possible, mapped across frameworks when changes occur. This is explained in more detail in the ‘frameworks’ section below.

35. When these changes have occurred, users have been alerted via updates in the official statistics introduction and methodology sections of the key findings document. When changes to inspection frameworks or methodological changes have been implemented to improve the output, guidance has been added to footnotes and the key findings document for easy access.

36. Inspection outcomes data presented in provisional official statistics releases will match the data shown in DataView. Where inspection reports are published after the final publication date included within a release, the inspection outcomes will be reflected within the next provisional official statistics release.

37. There is no comparable data published by other producers of official or national statistics for school inspections in England.

38. In Scotland, inspections are carried out by Education Scotland and can be found at:

39. In Wales, inspections are carried out by Estyn and can be found at:

   www.estyn.gov.uk/.

40. In Northern Ireland, inspections are carried out by Education and Training Inspectorate (ETI) and can be found at:

   www.etini.gov.uk/.

41. Ofsted also produces regular management information on the outcomes of school inspections. At present, the methodology used to produce both releases is the same.
42. Several third parties provide interactive tools displaying publicly available Ofsted inspection judgements. These appear to be collated by using advanced computer techniques to harvest information from published inspection reports. Ofsted cannot comment on the quality of these datasets.

Changes that affect how comparable data are across time:

Integrated inspections

43. Where a maintained school, academy or special school offers residential boarding, Ofsted aims to inspect both the education and boarding provision during the same inspection. These are known as integrated inspections. If integrated inspections have taken place during the period these are included in table 2.

Frameworks

44. As noted above, framework changes have an impact on what we can report on in a consistent way. Consideration of how judgements change means that between frameworks there may be breaks or changes in the way we report certain judgements.

45. The common inspection framework was introduced in September 2015 following the ‘better inspection for all’ consultation. This consultation initiated various changes to the way Ofsted inspects providers. The common inspection framework can be found here:

46. The common inspection framework is designed to bring together the inspection of different education, skills and early years settings to provide greater coherence across different providers that cater for similar age ranges. Inspection judgements have therefore been standardised to apply across all remit areas.

47. Guidance on the framework and handbook for inspectors used for inspections up until August 2015 can be found at:

and

6More information can be found at: www.gov.uk/guidance/changes-to-education-inspection-from-september-2015.
48. These framework changes have the following impact on current reporting:

- **Overall effectiveness:** this judgement is reported consistently across all frameworks from September 2005 to the current framework.

- **Effectiveness of leadership and management:** this judgement is reported consistently across all frameworks from September 2005 to the current framework.

- **Quality of teaching, learning and assessment:** this judgement is reported consistently across all frameworks from September 2005 to the current framework.

- **Outcomes for pupils:** this judgement is reported consistently across all frameworks from September 2005 to the current framework.

- **Personal development, behaviour and welfare:** A new ‘personal development, behaviour and welfare’ judgement was introduced in September 2015 and supercedes the previous ‘behaviour and safety of pupils’ judgement, which is no longer presented in the most recent outcomes data. As such, analysis of this judgement (behaviour and welfare) will only represent inspections since September 2015 and will not provide a comprehensive view of the quality of provision nationally. Users can consult inspection reports or the following management information release should they wish to obtain these outcomes:

- **Early years provision:** This judgement is reported consistently across all frameworks from September 2005 to the current framework, with the exception of 2012/13 and 2013/14 academic years when, due to legislation changes, the judgement was not reported. Since September 2015, nursery schools have not received a separate early years judgement.

- **16 to 19 study programmes:** This judgement has been reported broadly consistently since September 2005. However, this judgement was not reported in 2012/13 and 2013/14 due to changes in legislation. Between 2005 and 2012 the judgement was made under the ‘overall effectiveness of the sixth form, judgement.'
The selection process

49. Not all schools are inspected with equal regularity. Ofsted must inspect all schools to which section 5 of the Education Act 2005 (as amended) applies, within prescribed intervals. However, Ofsted takes a proportionate approach to inspection, as indicated in our inspection frameworks.

50. The result of this is that the schools inspected in a particular academic year are very unlikely to be representative of schools as a whole. This may also affect the comparability of school inspection outcomes between years. This is as a result of the following:

- Schools that were previously judged to be less than good in their most recent inspections are inspected more frequently than good schools.
- As of September 2015, good schools receive a short inspection\(^7\) approximately every three years. A short inspection determines whether the school continues to provide the same standard of education for the pupils\(^8\). A short inspection will not result in individual graded judgements nor will it change the overall effectiveness grade of the school.
- If the inspection is converted to a full section 5 inspection then inspectors will make the full set of graded judgements required under section 5. Although the overall effectiveness grade of the school may remain unchanged if converted to a section 5 inspection, it is more likely that the judgements will either show improvement or decline than remain good.
- Users need to be particularly cautious if comparing outcomes from 2015/16 or later with previous years. Before September 2015, all good schools received a section 5 inspection no later than the fifth academic year, including in cases where they continued to provide the same standard of education.
- Primary and secondary schools previously judged to be outstanding in their most recent inspection are exempt from routine inspection and will not be inspected unless Ofsted has concerns about them. This can include concerns identified through risk assessment, a complaint, a serious safeguarding incident or concerns about the standards of leadership and management.
- Outstanding special schools, nursery schools and pupil referral units are not exempt from routine inspection. These schools receive a

\(^7\) A definition of ‘short inspection’ is provided in the glossary.
\(^8\) Good primary and secondary schools and outstanding nursery, pupil referral units and special schools are all eligible for short inspections. Outstanding primary and secondary schools are except from any routine inspections (including) short inspections.
short inspection in the same way that all good primary and secondary schools do. If the inspector concludes that the school is continuing to provide an outstanding standard of education, the inspection will not convert to a full section 5 inspection.

**Policy implications**

51. Some policies within Ofsted and the DfE impact on the comparability of different school types to each other and to schools as a whole. Comparisons between school types should be treated with caution due to the different inspection frameworks used over the past five years and the variation in the number of schools included in the different categories.

- **Converter academies** (including special converters and alternative provision converters)

  When a local authority maintained school converts to become an academy it usually keeps the inspection history from its predecessor school. For example, a school judged outstanding for overall effectiveness that converted to an academy would retain its outstanding grade until it was inspected as an academy. Reporting of converter academies therefore includes some judgements where the school was inspected as an academy, and some where the most recent inspection was of the predecessor school. It is important to recognise that the academy and the predecessor school are different legal entities.

- **Sponsor-led academies** (including special sponsor-led academies and alternative provision sponsor-led academies)

  Maintained schools may close to re-open as sponsor-led academies. Such schools are more likely to be schools that were judged to require improvement or to be inadequate at their most recent inspection. The new academy does not retain the inspection history of the maintained school and is not included in Ofsted’s statistics until it is inspected as an academy. In addition, a large number of sponsor-led academies have not yet been inspected and inspection outcomes therefore reflect only those sponsor-led academies that have been inspected. Therefore, users should be cautious when drawing conclusions about the performance of all open sponsor-led academies based on the sub-set with inspection outcomes.

  Occasionally, schools not inspected under section 5 may become academies. Independent schools sometimes do this. In this case, the previous school closes and re-opens as a new sponsor-led academy and the inspection history of the previous school is not included in Ofsted statistics.

- **Free schools**
Most free schools that are opened are new schools. As a consequence, we have not inspected all free schools that have opened. Therefore, caution needs to be exercised when using data as it only represents those free schools that have been inspected. As with sponsor-led academies, the number of free schools that have opened is comparatively small when compared to other school types. Users should take this into account when comparing free schools with other types of schools. This is because small groups such as free schools are more sensitive to changes than larger groups, such as maintained schools. For example, a change of one inspection grade in a group of 100 schools will bring one percent change in the overall group inspection outcomes, whereas a change of one grade in a group of 1000 schools will result in a change of 0.1%, which is less likely to change the overall profile of that group.

- Inspections in each academic year

As stated earlier, the outcomes of schools inspected in the academic year is very unlikely to be representative of schools as a whole, as Ofsted adopts an approach to inspection which is proportionate to risk. Also, new schools are usually inspected according to a fixed cycle, so in the majority of cases the timing of this inspection is not determined by performance data of the school.

The result is that there may be differences in the inspection outcomes within the year, between schools that have previously been inspected and new schools. Because of this, users will need to take this into account when comparing the outcomes of different types of schools or inspections year on year. At present, inspections of new free schools and sponsor-led academies account for a larger proportion of all inspections of these types of schools than is the case for academy converters and local authority maintained schools.

**Accuracy and reliability**

52. This release reports on (1) the most recent inspection grade of all open schools and (2) inspections that have taken place during the academic year. Each statistical release states the publication date by which a published inspection report would be included. If an inspection report has been published but subsequently withheld then this will not be included in inspection outcomes. Footnotes will advise where this is the case. Where the inspection report is published after the cut-off date given for the release, the inspection judgement will not be included. These will appear in later releases, after they have been published. Schools that have not yet been inspected are included in the list of all open schools.

53. Ofsted moderates all inspection reports where a school is judged to be inadequate. This may result in some inspection reports being published after
the publication cut-off date required for inclusion within the provisional release. Therefore, provisional statistics are likely to under-represent schools being placed in a category of concern. In addition, where there are concerns that further evidence may be required to secure the inspection evidence base, this will delay publication of an inspection report. Further details of these procedures can be found here:

54. This release does not include the inspection outcomes of independent schools, further education and skills providers and providers of early years provision. These are included in separate releases. Further details of these can be found at:

Use of Ofsted administrative data

55. Inspection outcomes data are extracted from Ofsted’s administrative systems. Errors in recording inspection outcomes may affect the quality of source data. A number of appropriate systems have been put in place by Ofsted to minimise the risk of reporting error:

Until April 2015

56. Until April 2015, Ofsted used a document scanner as a means of validating the outcomes entered into our systems of inspections undertaken under section 5 of the Education Act.

Migration to new administrative system

57. Ofsted introduced a new administrative system in September 2015. A thorough check of the migration from the old administrative system to the new system was undertaken to ensure that inspection data was correct.

Since September 2015

58. Inspections outcome data is extracted from Ofsted’s administrative systems. Inspection outcomes are entered onto our systems by the lead inspector. As inspection reports undergo a quality assurance process, any errors are likely to be identified at this stage. In addition, a sample of the entries made onto our administrative system is checked to ensure that these match the inspection report. There is a focus on checking those entries where the risk of there being an error is highest. An example of this is where the inspection outcome awarded changes during the quality assurance process. There remains a small chance that some outcomes are entered incorrectly onto our systems.
Technical production

59. Technical production of the publications may also result in manual errors. A rigorous data quality assurance procedure is adopted with the aim of minimising the risk of reporting error. If an error is discovered within the document, a note is placed on the website and a corrected version of the document is uploaded as soon as possible.

60. More information on the issues relating to the use of administrative data is available here:

Data obtained from other sources

61. Data indicating whether schools are open or closed and their type and phase of education is obtained from the DfE’s Get information about schools (GIAS) database9, formerly Edubase. The quality of data relating to school opening and closures is considered to be good. Changes that occur as a result of schools converting to academy status, rebrokering between academy trusts, or closing to become sponsor-led academies are managed centrally by the DfE’s Academies Operations and Strategies team. The process for changes undergoes monthly reconciliation checks against other data systems within the DfE. Some issues have been identified around the closure, merger and amalgamation of local authority maintained schools. Local authorities do not always inform the DfE of these changes, and therefore these are sometimes identified after the event. These discrepancies are usually picked up as part of checks built into other processes.

62. Official statistics published since April 2016, use the same Edubase/GIAS data for all charts and tables. For tables and charts showing the most recent inspection of a school, information about the school is based on the position at the end of the period. For tables and charts showing inspections in the academic year, school information reflects the school at the point of inspection. While this represents a small difference in the methodology within the official statistics, the difference between releases is likely to be so small, and affect such a small number of cases, that comparisons can still be made with older releases.

63. Data obtained from GIAS on the type of education is also considered to be of good quality. Any change to the type of education requires verification from the DfE. The phase of education is not subject to the same verification, local authority maintained schools have some remit to change their age range through a local process. Errors are picked up as part of the DfE’s performance

9 https://get-information-schools.service.gov.uk/
table validation process but this may be after the event. The DfE has recently introduced a requirement for schools to update their record every 90 days.

**Timeliness and punctuality**

64. Data is currently published three times a year and includes details of inspections that have taken place and been published in the relevant period. To ensure data is as timely as possible, each release includes the most recent possible full month of inspections.

65. Data is published at 09:30 on the date pre-announced in the publication schedule: [www.gov.uk/government/organisations/ofsted/about/statistics](http://www.gov.uk/government/organisations/ofsted/about/statistics). Information on any delay in publication can also be found on the publication schedule.

66. We allow one calendar month after the end of the reporting period as the cut-off date for the inclusion of published inspection reports. This is to allow time for the publication of the majority of inspections that have taken place within the reporting period. The average production time for this release is approximately six weeks. This time includes obtaining and cleaning the data, drafting findings, quality assuring all outputs and uploading the information onto the gov.uk website.

67. Publications are announced via social media. Pre-release access is given in accordance with the pre-release to official statistics order (2008). Details of this order can be found at: [www.statisticsauthority.gov.uk/about-the-authority/uk-statistical-system/legislation/pre-release-access/index.html](http://www.statisticsauthority.gov.uk/about-the-authority/uk-statistical-system/legislation/pre-release-access/index.html).

68. The list of post holders granted pre-release access can be found as a separate document accompanying each release.

**Accessibility and clarity**

69. Ofsted releases are published in an accessible format on the Gov.UK website. The information is publicly available and there are no restrictions on access to the published data. Each release includes outcomes from Ofsted inspections that have subsequently been published. The data is aimed at keeping users informed of the progress of the inspection framework and of changes in the maintained schools and academies sector.

70. Supporting underlying data in an accessible format accompanies each release to allow users to perform their own analysis. Users may use and re-use this information (not including logos) free of charge in any format or medium, under the terms of the Open Government Licence. To view this licence, visit: [www.nationalarchives.gov.uk/doc/open-government-licence/](http://www.nationalarchives.gov.uk/doc/open-government-licence/).

71. This underlying data consists of school level data in Excel and CSV. An Excel file is also provided with additional charts.
Performance, cost and respondent burden

72. There is no respondent burden in relation to this statistics release as data is a by-product of Ofsted’s inspection process. The only cost involved is the internal resource involved in collating the release.

Confidentiality, transparency and security

73. Where sensitive or personal data is held by Ofsted, the disclosure control processes we have in place ensure that this data is not published. This includes suppressing the number of pupils for providers with fewer than three pupils on roll.

74. All data releases follow Ofsted’s confidentiality and revisions policies, which can be found in these locations:

Glossary

School types

This data includes four school types: academy converters, academy sponsor-leds, free schools local authority maintained schools.

Academy converter

Academy converters are the most common type of academy. They do not have to follow the national curriculum and can set their own term times. They still have to follow the same rules on admissions, special educational needs and exclusions as other state schools.

Academy converters retain their latest inspection grade, even if the most recent inspection was of the predecessor school. However as part of re-brokering process some academy converters lose their LAEstab, and therefore their inspection grade, when they join a new multi academy trust.

Academy sponsor-led

Sponsor-led academies are academies which have sponsors such as businesses, universities, other schools, faith groups or voluntary groups. Sponsors are responsible for improving the performance of their schools. University technical colleges and studio schools are included in academy sponsor-led.

Sponsor-led academies are viewed as new legal entities and do not retain their inspection history.

Free schools

Free schools are funded by the government but are not run by the local authority. They are set-up on a not-for-profit basis by charities, universities, and community and faith groups, among others.

Free schools are ‘all-ability’ schools, so cannot use academic selection processes like a grammar school. They can set their own pay and conditions for staff and change the length of school terms and the school day. Free schools do not have to follow the national curriculum.
Local authority maintained schools

Maintained schools are funded by the government and run by the local authority. They must follow the national curriculum.

Short inspections

As of September 2015, Ofsted undertook short inspections for primary and secondary maintained schools and academies that were judged good at their previous inspection. Short inspections take place approximately every three years. A short inspection will confirm that the previous grade for overall effectiveness is accurate and the setting remains good and that safeguarding is effective. These arrangements also apply to special schools, pupil referral units and maintained nursery schools that were judged outstanding at their previous inspection.\(^\text{10}\)

A short inspection determines whether the school continues to provide the same good or outstanding standard of education for pupils. A short inspection does not result in individual graded judgements. It does not change the overall effectiveness grade of the school or provider. If inspectors believe that they need to gather additional evidence or a change of grade may be necessary, they will trigger a section 5 inspection, which will make the full set of graded judgements using the four-point grading scale.

From November 2017, around 20% of previously good schools have been subject to a full section 5 inspection instead of a short inspection, where our risk assessment has told us us that a short inspection would be highly likely to convert. For example where a school underwent significant change, such as changing its age range, or where the quality of provision may have deteriorated significantly.

---

\(^{10}\) These settings are currently not exempt from routine inspections if they are judged outstanding.
