

## **Preliminary flood risk assessment: London Borough of Harrow**

**This addendum by London Borough of Harrow (2017) updates the council's preliminary flood risk assessment report published in 2011. Read the addendum in conjunction with the [preliminary assessment report](#).**

### **Addendum**

The preliminary flood risk assessment (PFRA) and flood risk areas (FRAs) for London Borough of Harrow (LBH) were reviewed during 2017, using all relevant current flood risk data and information.

### **Past flood risk**

There have not been any flood events since the publication of the original PFRA report in December 2011 that have added to or changed LBH's understanding of significant flood risk in the LLFA area. Any flooding incidents that have occurred have not been in new locations not predicted to be at risk of surface water flooding, therefore they have not changed LBH's understanding of significant flood risk.

### **Future flood risk**

Hydrology and hydraulic modelling studies for projects have been carried out by LBH have helped the lead local flood authority to increase their understanding of future flood risk and working directly with the support of the Environment Agency, the Greater London Authority, the Thames Regional Flood and Coastal Committee and the London Drainage Engineers Group at workshops has improved the understanding of flood risk.

### **Flood risk areas (FRAs)**

The following FRA has been identified for the purposes of the Flood Risk Regulations (2009) 2nd planning cycle:

- Greater London. This FRA covers the entire borough except for an area to the very north which is mostly green open space with a hospital situated amongst it.

### **Other changes**

There are no other changes consider important in relation to the assessment of flood risk in the area.

**London Borough of Harrow  
December 2017**
