

## **Preliminary flood risk assessment: London Borough of Redbridge**

**This addendum by London Borough of Redbridge (2017) updates the council's preliminary flood risk assessment report published in 2011. Read the addendum in conjunction with the [preliminary assessment report](#).**

### **Addendum**

The preliminary flood risk assessment (PFRA) and flood risk areas (FRAs) for London Borough of Redbridge (LBR) were reviewed during 2017, using all relevant current flood risk data and information.

There is no change to the assessment of risk following the review.

### **Past flood risk**

There have not been any flood events since the publication of the original PFRA report in December 2011 that have added to or changed LBR's understanding of significant flood risk in the lead local flood authority (LLFA) area. Any flooding incidents that have occurred have not been in new locations not predicted to be at risk of surface water flooding, therefore they have not changed LBR's understanding of significant flood risk. The floods have however been added into annex 1 for information.

### **Future flood risk**

Hydrology and hydraulic modelling studies for projects have helped the LLFA to increase their understanding of future flood risk and working directly with the support of Environment Agency, the Greater London Authority, the Thames Regional Flood and Coastal Committee and the London Drainage Engineers Group at workshops has improved the understanding of flood risk.

### **Flood risk areas (FRAs)**

The following FRA has been identified for the purposes of the Flood Risk Regulations (2009) second planning cycle:

- Greater London – part of the London Borough of Redbridge lies within this FRA

### **Other changes**

No change

**London Borough of Redbridge  
December 2017**
