

# Secondary and primary school applications and offers: March and April 2018

14 June 2018

## The majority of applicants for a school place received a preferred offer

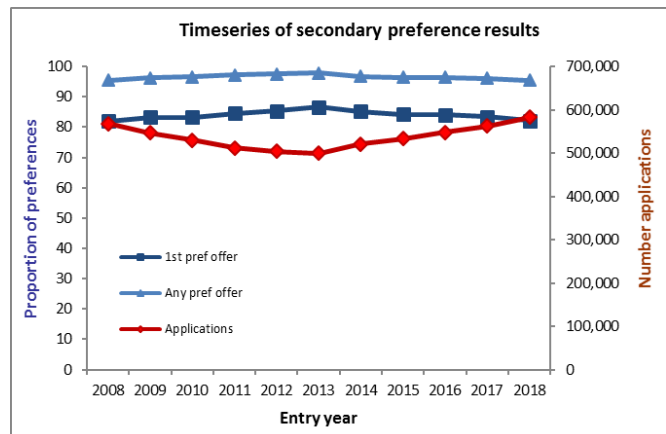

In 2018 82.1% of applicants for a **secondary** school place received an offer of their first preference school. 93.8% received an offer of one of their top three preferences.

At **primary** level, 91.0% of applicants received an offer of their first choice school, and 97.7% received an offer of one of their top three preferences.

## Percentage receiving secondary first choice offer drops as applications increase

In 2018 582,761 applications for a secondary school place were received, an increase of 3.6% on 2017 and the highest number of applications received since this collection started in 2008.

The proportion of first preference offers dropped to 82.1%, compared to 83.5% in 2017. The proportion receiving an offer of any of their preferences also dropped slightly to 95.5% in 2018, from 96.1% in 2017.

## A slightly increased proportion received primary first choice offer as applications fall

Applications for a primary school place have dropped by 2.0% from 2017, with 608,180 applications. This total is the lowest seen in the five years that primary level figures have been collected.

The proportion of primary applicants who received an offer of their first choice school increased from 90.0% in 2017 to 91.0%. The proportion receiving an offer of any of their preferences also increased slightly from 97.7% to 98.1%.

Primary level data has only been collected since the introduction of a primary national offer day in 2014.

## About this release

This statistical release provides the number of offers made to applicants for both secondary and primary school places and the proportion which have received preferred offers (1<sup>st</sup>, 2<sup>nd</sup>, 3<sup>rd</sup> preference etc).

The data is collected from local authorities, where it is produced as part of the annual application and offer process for applicants requiring a place to start at secondary or at primary school in September 2018.

The offers were made, and data collected, based on the national offer days of 1 March 2018 (secondary) and 16 April 2018 (primary).

## In this publication

The following documents are included as part of this statistical publication:

Local authority tables (Excel .xlsx)

Underlying data (open format .csv and metadata .txt)

An accompanying quality and methodology information document provides information on the data source, the coverage and quality and explains the methodology used in producing the data.

## Feedback

We are always interested in improving how our releases look and welcome feedback on any aspect of this document at [school.preference@education.gov.uk](mailto:school.preference@education.gov.uk).

# 1. Secondary applications and offers

These figures come from the application and offer process undertaken by local authorities to enable them to send out offers of a place in a secondary school to all applicants on the national offer day of 1 March 2018. The secondary figures have been collected since 2008 and a time series of the key figures has been provided below.

582,761 applications were received for a place at secondary school in 2018, a 3.6% increase on 2017. This continues the increase first seen since 2013, when the rise in births which began in the previous decade started to reach secondary school age, and follows a 2.6% increase between 2016 and 2017. Since 2013, when secondary applications were at their lowest, there has been a 16.6% increase in the number of parents applying for a secondary school place for their child.

The proportion of secondary applicants receiving an offer of their first choice school has dropped from 83.5% in 2017 to 82.1% in 2018. The proportion of applicants who received an offer of any of their preferred schools also dropped slightly to 95.5% in 2018 (from 96.1%).

**Table A: Timeseries of key secondary preference rates, England**

Entry into academic year	% made 1st preference offer	% made 1 of top 3 preferences	% made offer of any preferred school	Number of applications
2010/11	83.2	94.9	96.6	529,645
2011/12	84.6	95.6	97.2	512,193
2012/13	85.3	95.9	97.6	503,734
2013/14	86.7	96.5	97.8	499,968
2014/15	85.2	95.5	96.8	521,274
2015/16	84.2	95.0	96.4	533,314
2016/17	84.1	95.0	96.5	548,006
2017/18	83.5	94.6	96.1	562,487
2018/19	82.1	93.8	95.5	582,761

## Geographical variation

At local authority level Northumberland (98.1%), East Riding of Yorkshire (96.7%) and Bedford (96.4%) achieved the three best first preference rates in 2018. Northumberland has been the top performer in this measure for the last three years.

As in previous years, the lowest first preference rates at secondary level are all in London. Omitting City of London (which has a tiny number of application and has no secondary schools), Hammersmith & Fulham (51.4%), Kensington & Chelsea (54.3%) and Lambeth (55.2%) achieved the lowest rates in 2018. Hammersmith & Fulham has had the lowest first preference rate for the last three years.

The higher number of practical options available to London applicants and ability to name six preferences may encourage parents to make more speculative choices for their top preferences. There is much less regional variation in the proportions receiving any preferred offer compared to those for receiving a first preference (see chart below).

An applicant can apply for any school, including those situated in another local authority. Their authority liaises with the requested school, to ensure the applicant is considered under the admissions criteria, and makes the offer. In 2018 91.6% of secondary offers made were of schools inside the home authority. This figure has been stable for the past few years.

This release concentrates on the headline figures for the proportion of children receiving their first preference or a preferred offer. However, the main tables provide more information such as the number of places available, the proportion of children for whom a preferred offer was not received and whether the applicants were provided with offers within or outside their home authority.

## 2. Primary applications and offers

The primary table is based on the offers made by local authorities on the primary national offer day of 16 April 2018. This national offer day was introduced in 2014, which was the first year that primary application and offer data were collected and published. A timeseries of the key figures has been provided below.

The number of applications for a primary school place in 2018 was 608,180, 2.0% lower than in 2017 (620,330). This decrease is a result of the notable drop in births in 2013, which is now feeding into primary school applications. The number of applications is the lowest seen in the five years that this data has been collected.

The proportion of applicants receiving their first preference offer has risen to 91.0%, up 1.0 percentage point on 2017. The proportion receiving an offer of any of their preferences has also increased slightly, from 97.7% (2017) to 98.1%.

**Table B: Timeseries of key primary preference rates, England**

Entry into academic year	% made 1st preference offer	% made 1 of top 3 preferences	% made offer of any preferred school	Number of applications
2014/15	87.7	95.7	96.4	623,526
2015/16	87.8	95.9	96.5	636,279
2016/17	88.4	96.3	96.9	641,572
2017/18	90.0	97.2	97.7	620,330
2018/19	91.0	97.7	98.1	608,180

## Geographical variation

At local authority level East Riding of Yorkshire (97.6%), Northumberland (97.4%) and Rutland (97.4%) achieved the best first preference rates in 2018. All these authorities are in the top three for the first time in the last three years.

The local authorities with the worst first preference rates in 2018 were Kensington & Chelsea with 68.4%, Camden (76.5%) and Hammersmith & Fulham (76.6%). Both Kensington & Chelsea and Hammersmith & Fulham have been in the bottom three performers in this measure for the last three years.

Although overall results are better at primary level than at secondary, for London local authorities the improvement is much more marked. In 2018, for London as a whole, the first preference rate at primary level was 86.6% (85.9% in 2017), compared to 66.0% at secondary level (68.2% in 2017).

As in previous years, at primary level a smaller proportion of offers were made of schools outside the applicant's local authority compared to secondary level. In 2018 97.1% of offers were inside the home authority. This has remained stable for the five years for which primary data is available.

### 3. List of Tables

The following tables are available in Excel format on the department's statistics [website](#):

- 1 Applications and offers for entry to secondary schools in England for the start of academic year 2018/19.
- 2 Applications and offers for entry to primary schools in England for the start of academic year 2018/19.

When reviewing the tables, please note that:

- The 'total places' figure tells us how many places the local authority had available in the first year of entry of either primary schools or secondary schools. This covers places in mainstream schools only (for example, not places in Pupil Referral Units), for either reception year (for primary schools) or for the main entry year (usually year 7, but sometimes year 9) for secondary schools.
- The percentages in the tables for those applicants provided with any preferred offer, those offered a non-preferred school and those made no offer together sum to 100 per cent of the applicants. Offers made to non-applicants are not included in any of these rates.
- The Code of Practice for Official Statistics requires we take reasonable steps to ensure that our published or disseminated statistics protect confidentiality. The tables in this statistical publication have been analysed and we are satisfied that no suppression is required to preserve the confidentiality of the applicants for school places.

### 4. Further information

The main tables provide the number of school places available and applications, and the proportion of preferences met or not met (by rank). The underlying data available on the department's statistics [website](#) provides the numbers for those who received an offer of their first preference, second preference etc. It also provides information on each local authority's national curriculum (NC) year of admission (reception for primary school places and either year 7 or year 9 for secondary places), the number of preferences that each local authority permits and the number and proportion of applications which were made online.

The application and offer data is gathered at pupil level and aggregated by the department into the local authority level data provided in this publication. The original data being at pupil level allows us to produce school level figures of the number of applications received and the preference level of offers made. Contact the department at [school.preference@education.gov.uk](mailto:school.preference@education.gov.uk) for more information about accessing this dataset.

### 5. Technical information

A quality and methodology information document accompanies this release. This provides further information on the data sources, their coverage and quality and explains the methodology used in producing the data, including how it was processed.

## 6. Official Statistics

These are Official Statistics and have been produced in line with the Code of Practice for Official Statistics.

This can be broadly interpreted to mean that the statistics:

- meet identified user needs;
- are well explained and readily accessible;
- are produced according to sound methods;
- are managed impartially and objectively in the public interest.

Once statistics have been designated as Official Statistics it is a statutory requirement that the Code of Practice shall continue to be observed.

The Department has a set of statistical policies in line with the Code of Practice for Official Statistics.
