The UK’s international road freight activity increased in 2017

In 2017, for UK registered HGVs transporting freight internationally there were...

- 3.7 million tonnes exported from the UK (down 2%)
- 4.2 million tonnes imported to the UK (up 3%)
- 7.8 million tonnes lifted in total (up 1%)
- 2.6 billion tonne kilometres moved from the UK (up 3%)
- 2.8 billion tonne kilometres moved to the UK (up 8%)
- 5.4 billion tonne kilometres moved in total (up 5%)

► In 2017, more goods were imported by road to the UK than exported.
► 97% of goods lifted by UK HGVs were to or from the EU15.
► 24% of goods lifted by UK HGVs were between the UK and France.
► Foreign HGV cabotage accounted for just over 1% of road freight activity within the UK.
Goods lifted: In 2017, the amount of goods lifted by UK-registered HGVs travelling to or from the UK was 7.8 million tonnes, up 1% on 2016, but 51% lower than the 1999 peak of 15.9 million tonnes.

The rise in total goods lifted was driven by an increase in goods imported, which rose by 3% compared to exports which fell 2%. It is not possible to conclude if this rise in imports is a change to the trend seen since 2013 or whether future figures will revert to the continued decline previously seen.

A variety of factors have influenced trends. In recent years, there was a 14% decrease in goods lifted in the year following the 2008 recession and decreases seen in 2014 and 2015 may be due in part to the intermittent disruptions seen at key freight interchanges e.g. disruption at Dover-Calais. [Table RFS0201].

Historically, UK registered vehicles have consistently imported more goods to the UK than they exported. In 2017, of the 7.8 million tonnes of goods lifted, 4.2 million tonnes were imported, and 3.7 million tonnes were exported (Chart 1)

Chart 1: Goods lifted by UK-registered HGVs, 2007-2017 [Table RFS0201]

Goods moved: There was a 5% increase in the amount of goods moved from 5.1 billion tonne kilometres in 2016 to 5.4 billion tonne kilometres in 2017. This is a fall of 68% from the 1997 peak of 16.5 billion tonne kilometres. Of the 5.4 billion tonne kilometres of goods moved, 2.6 billion tonne kilometres were exports from the UK and 2.8 billion tonne kilometres were imports.
Country of trade: In 2017, around 86% of the tonnage exported from the UK in UK-registered vehicles was unloaded in one of five countries: Irish Republic (23%), France (22%), Belgium (19%), the Netherlands (12%) and Germany (10%). The same five countries also represented the origin of 88% of imported goods (Chart 2 and Tables RFS0202 and RFS0203).

Chart 2: Goods lifted by UK-registered HGVs by country of loading or unloading, 2017 [Table RFS0202]

Commodities carried by UK-registered HGVs

The most common single category of commodity exported by UK vehicles in 2017 was “Groupage” (ie mixed goods) (17%). This was followed by “Machinery and equipment” (12%) and “Food products” (12%). The main commodities imported were “Food products” (23%), “Groupage” (14%) and “Agricultural products” (10%). Unidentified and unclassified goods accounted for around 3% of both exports and imports. (Chart 3 and Table RFS0206)

Chart 3: Goods lifted by UK-registered HGVs by commodity type, 2017 [Table RFS0206]

Definitions

Origin/destination: Some HGV trips may be part of a multi-modal or multi-stage journey. The final origin/destination of the HGV road element may therefore not be the ultimate origin/destination of the goods.

Commodity: goods are classified into commodity types and sub-categories by the ‘standard goods classification for transport statistics 2007’ NST2007.

Grouped goods: when, for mixed consignments, no single commodity makes up 75% or more of the consignment weight.
The total number of goods vehicles (powered vehicles and unaccompanied trailers) travelling to Europe from Great Britain in 2017 was 3.5 million, up slightly from the 3.4 million in 2016 (Table RORO0101).

**Powered vehicles:** The number of UK-registered vehicles travelling to Europe was 345 thousand (slightly lower than the 346 thousand vehicles in 2016), whilst the number of foreign-registered vehicles was 2,065 thousand (a fall of 1% on the 2016 figure of 2,090 thousand) (Chart 4).

Over the last 10 years, the total number of powered goods vehicles travelling to Europe from GB has increased by 4%; within which foreign-registered vehicles have increased by 12% while the number of UK-registered vehicles has decreased by 25%.

During the recession period of 2008 to 2009, there was a drop in the total number of goods vehicles travelling from GB to Europe, with the majority of this fall being accounted for by fewer foreign vehicles. It wasn’t until 2013 that the total number of vehicles begin to increase again.

Of the foreign-registered powered vehicles travelling to Europe from GB in 2017, the most common (480 thousand) were Polish-registered, followed by vehicles registered in Romania (252 thousand), the Netherlands (203 thousand), Spain (133 thousand) and Germany (127 thousand) (Table RORO0201).

**Chart 4: UK and foreign registered powered goods vehicles travelling to Europe from GB, 2007-2017** [Table RORO0101]
The number of firms using an HGV Standard International (SI) Operator Licence in Great Britain decreased from 8,289 in 2015-16 to 8,186 in 2016-17, a fall of 1%. This follows a 4% increase seen in the previous year, with decreases seen across most regions. The number of licences in 2016-17 is 28% below that seen a decade ago in 2006-07 when just over 11 thousand licences were in issue (Chart 5).

The highest number of licences issued were in the Eastern region of GB, 1,854 in 2016-17, an increase of 2% on the 1,812 in issue in 2015-16. The large number of licences issued in the Eastern region maybe due in part to the proximity to port links to European destinations and generally higher levels of freight activity in this area (Tables RFS0121).

The total number of vehicles covered by SI licences remained virtually unchanged from 82,694 in 2015-16 to 82,634 in 2016-17. The average size of operators’ vehicle fleet has increased from 7.57 vehicles in 2006-07 to 10 vehicles in 2016-17. This means fewer licences are in issue than 10 years ago (2006-07) but more vehicles are being specified under these licences. The same trend can be seen for domestic licences.

---

---

**Definitions**

UK hauliers must obtain a Standard International Operator’s Licence to carry goods for others, for hire or reward, within the UK and on international journeys. This applies to all vehicles with a gross vehicle weight rating above 3.5 tonnes.

---

**Change in Standard International licences in issue between 2016 and 2017**

- 1% decrease in number of SI licences in issue
- No change in number of vehicles specified under SI licences

---

**Detailed statistics...**

on the number of operator licences, broken down by issuing office, can be found within the Traffic Commissioner’s Annual Reports.

Data for 2017-2018 were not available at the time of producing this publication.
In 2016, 39.7 million tonnes of goods were lifted to and from the UK by foreign-registered HGVs, a increase of 12% on 2015. Since 2009, Polish HGVs have lifted the largest tonnage of goods to and from the UK in total of all the EU28 countries, lifting 11.1 million tonnes in 2016. Prior to this, between 2002 and 2008, Irish HGVs carried the largest total weight of goods into or out of the UK, mostly across the Irish land boundary between the Republic of Ireland and Northern Ireland. Irish vehicles continued to carry significant quantities in 2016, as did Romanian, Spanish, Dutch and German HGVs (Chart 6 and Tables RFS0208 and RFS0209).

Chart 6: Goods imported to and exported from the UK by foreign-registered HGVs: by vehicle registration country, 2016 [Tables RFS0208 and RFS0209]

Total goods imported to or exported from the UK by foreign-registered HGVs - Ten year comparison

**EU15:** refers to the European Union member states as of January 1995.

These consist of Austria, Belgium, Denmark, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, Netherlands, Portugal, Spain, Sweden and United Kingdom.

**EU28:** refers to the European Union member states as of July 2013.

These consist of the EU15 plus Bulgaria, Croatia, Cyprus, Czech Republic, Estonia, Hungary, Latvia, Lithuania, Malta, Poland, Romania, Slovakia and Slovenia.
In 2016, the overall level of **cabotage goods moved** in the UK was 1.8 billion tonne kilometres, 1.2% of all domestic UK HGV activity within the UK. The level of cabotage has remained relatively stable for the last decade, however a drop was seen during the period following the 2008 recession. (Table RFS0212).

In terms of **goods moved**, the major participants to cabotage in the UK were vehicles from Poland, Bulgaria and Ireland. These three countries accounted for 63% of cabotage in the UK. Netherlands, Romania and Lithuania together accounted for most of the remaining cabotage in 2016.

The amount of cabotage by Lithuanian vehicles in the UK has increased almost ten fold between 2006 and 2016 from 7.7 million tonnes kilometres to 73 million tonne kilometres.

The level of cabotage within the UK at 1.2% is below the EU28 average penetration rate of 3.2%. Levels of cabotage are highest in Belgium, France and Germany where rates are 8.7%, 6.2% and 5.6% respectively (Table RFS0216).

**Chart 7: Cabotage penetration rates, 2016 [Table RFS0216]**

---

Definitions

**Cabotage:** measured in tonne kilometres, refers to road haulage solely within one country by a vehicle registered in another country.

**Penetration rate:** defined as cabotage (in tonne kilometres) as a proportion of the sum of domestic and cabotage tonne kilometres.

Detailed statistics...

on the activity of foreign registered HGVs can be obtained from the Eurostat Transport Database.

Eurostat data for 2017 were not available at the time of producing this publication.

Information on cabotage in the UK by vehicle registration country can be sourced in Table RFS0212.
UK HGVs did approximately 309 million tonne kilometres of cabotage in foreign countries in 2017, up from 243 million tonne kilometres in 2016 (Table RFS0130 and Chart 8).

Note: Cabotage by UK vehicles in the EU is measured using data from the International Road Haulage Survey only. This differs from the measure of cabotage within the UK by foreign vehicles which is calculated using data from Eurostat. At the time of publication the most recent Eurostat data was 2016.

Users and uses of statistics

Road freight statistics are a key source of management information on the use of the country’s infrastructure. Main use occurs across various types of public and private bodies: the statistical office of the European Union (Eurostat), local and central government, such as the Office for National Statistics and Highways England; local town and transport planning bodies; commercial organisations, such as haulage operators and transport consultants, and academics.

Users are mainly interested in information such as the length of haul, empty running, the pattern of freight from abroad on UK roads. The statistics also support policies on freight, road safety and reducing congestion and pollution.
The figures in this release are derived from the International Road Haulage Survey (IRHS) which collects information on HGVs registered in Great Britain making international trips. Excluded from the survey are HGVs registered in Northern Ireland, foreign-registered vehicles and vehicles of 3.5 tonnes or less gross vehicle weight (Light Goods Vehicles).

The IRHS is a continuous survey which collects a range of information on freight movements from a sample of firms holding a standard international HGV licence. These licences are issued by the eight regional Traffic Commissioner Offices (TCO) and data are provided to the DfT by the Driver and Vehicle Standards Agency (DVSA).

Figures are weighted to be representative of the volume of HGV traffic travelling from GB to mainland Europe using ferry routes and the Channel Tunnel. This information is collected from returns provided by the roll-on / roll-off ferry operators (RORO), giving the number of powered vehicles and unaccompanied trailers carried on each route from GB to mainland Europe, and from monthly information supplied by Eurotunnel.

The use of RORO data to weight the IRHS data may introduce a small bias due to the fact that this information is collected on outward traffic only. This will affect the weighting of vehicles which return to the UK using a route different than that for the outward journey. RORO data is also only able to disaggregate between UK and foreign vehicles. An assumption is therefore made on the proportion of UK vehicles which are registered in Northern Ireland to obtain an estimate of GB registered vehicles.

Between 2011 and 2012, a number of changes were made to how the three DfT road freight surveys were processed. Caution should therefore be used for statistics based on the three freight surveys when making comparisons over time. See the Road Freight Statistics methodology note for more information.

This release and it’s contents partly rely on the use of administrative data from DVLA and DVSA. DfT have assessed the impact of this on the quality of these statistics, a report on which can be found in the Quality assurance of administrative data sources: Driver Vehicle Licensing Agency and Quality assurance of administrative data sources: Driver Vehicle Standards Agency.

Guidance on the methods used to compile these statistics and further information can be found in the Road Freight Statistics notes and definitions.
The data tables give further detail on the key results presented in this statistical release and statistics on other road freight topics, including the domestic activity of UK-registered HGVs. These data tables are available here: https://www.gov.uk/government/collections/road-freight-domestic-and-international-statistics

This release also collates statistics from a number of published sources that are revised and updated throughout the year. The data for this release were extracted in July 2018, and users can refer to the links overleaf for the most recent or revised data available for each of the sources used, and also caveats relating to the sources.

1. The web tables give further detail on the key results presented in this statistical release and statistics on other road freight topics, including domestic activity of GB-registered HGVs. They are available here: https://www.gov.uk/government/collections/road-freight-domestic-and-international-statistics

3. The statistics on road freight undertaken by foreign-registered vehicles have been taken from the Eurostat Transport database at http://ec.europa.eu/eurostat/web/transport/data/database

4. Guidance on the methods used to compile these statistics and further background information can be found in the Road Freight Statistics Notes and Definitions.

5. Details of ministers and officials who receive pre-release access to these statistics up to 24 hours before release can be found here: https://www.gov.uk/government/publications/road-freight-statistics-pre-release-access-list

6. The next annual Road Freight Statistics release will be published in the Summer of 2019. It will contain statistics for 2018.
