1 Background

This document provides the interface requirements for the Local Land Charges Search V1_0 Business Gateway service.

2 Purpose

The purpose of this document is to specify the interface between HM Land Registry and a Business Gateway Customer, indicating the message layouts and XML schemas that must be adhered to in order to communicate with HMLR, so that data may be exchanged between the organisations to effect Business Gateway.

The XML schemas associated with this interface represent the authoritative definition of the interface and takes precedence over any information in this document. The schemas will be issued with this document, along with sample requests and responses. See Annex for [samples](#).

3 Scope

The scope of this document encompasses the Local Land Charges Search V1_0 interface and XML message format.

4 Definitions, Acronyms and Abbreviations

Any specific terms and abbreviations are further explained in the Glossary.

5 Interface Specification

This section covers general information about the configuration and use of the interface.

6 XML Requirements

The XML schema attached as part of this document is compliant with 'XML Schema W3C Recommendation', 04 Feb 2004 and e-GIF standards. The XML version is 2.0 and encoding is UTF-8.

In an XML message, use of the characters &, <, “ and ‘ is constrained. The characters & and < are permitted to represent themselves only in Comments, Processing Instructions and CDATA sections. The characters “ and ‘ cannot appear in an attribute if they are being used to demarcate the value.

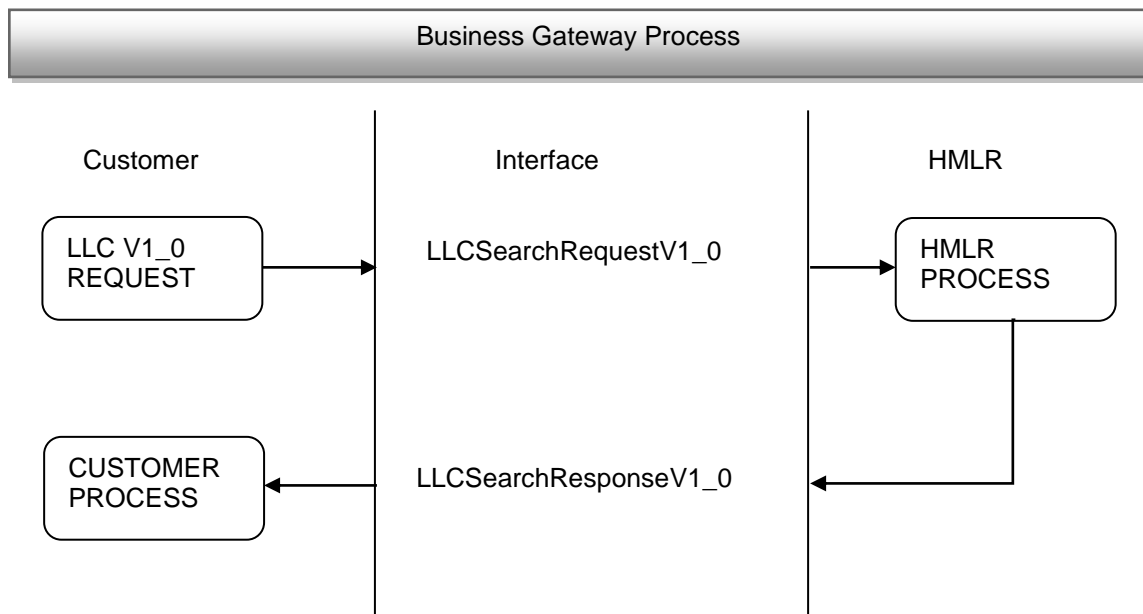

Escape sequences are used to represent these characters when required. These escape sequences are:

Character	Escape Sequence
&	&
<	<
>	>
“	"
‘	'

Within CDATA blocks the above characters are permitted and escape sequences must not be used. CDATA blocks are used for attachments to messages.

7 Business Gateway

Business Gateway Process Diagram

Interface Specification

Both the LLCSearchRequestV1_0 and the Poll Request messages are acknowledged with a LLCSearchResponseV1_0 message.

8 LLC Search V1_0 Specific Messages

Schema : LLCSearchRequestV1_0

LLCSearchResponseV1_0

Description : Local Land Charges Search request identifies any Local Land Charges within the search area identified by Title number or by GeoJson data. If a refresh search of an exiting Local Land Charges search is made within 6 months of the original request, then this is made using the stored search criteria from the original request.

The response indicates either:

- A success response includes a PDF representing the LLC1 search.
- A system error
- A rejection response with details of why the search was rejected.

9 XML Schemas

Current list of XML Schemas

Name	Version
LLCSearchRequestV1_0	1.0
LLCSearchResponseV1_0	1.0
PollRequest	1.0

See Annex for details of the individual [Schemas](#) relating to the Online Owner Verification service.

10 Local Land Charges search request (V1_0)

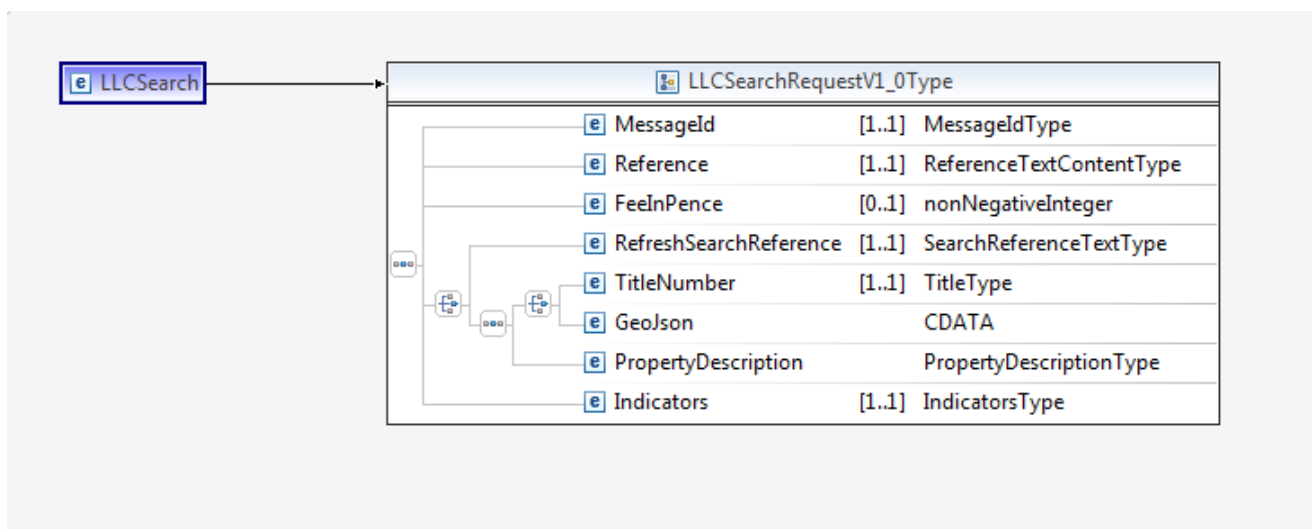

The LLCSearchRequestV1_0 message uses the namespace

http://www.landregistry.gov.uk/LLC/LLCSearchRequestV1_0 and must be valid with respect to the XML Schema published by HM Land Registry for that namespace.

Message	Description
LLCSearchRequestV1_0	This message allows Customers to submit Local Land Charges Search Requests to HMLR.

10.1 Request message structure

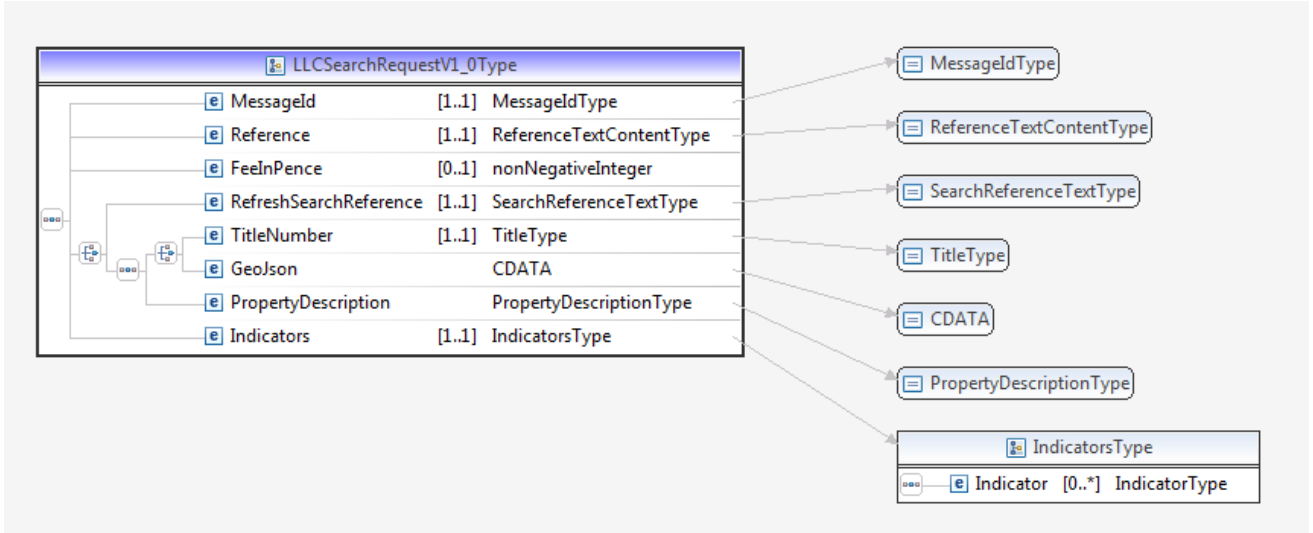

The request message comprises generic header information which is common with requests for other services, plus information specific to the LLCSearchRequestV1_0. This is illustrated below:

The options are for the refresh of an existing search within 6 months of the original request or a new search. A new search can be either using a Land Registry Title number or GeoJson, both would include a Property description.

Note: The Property description is used as additional information included on the result, but it is not verified or used for the actual search, only the Title number or GeoJson are used for the area of the search.

10.2 Request specific elements

The request message breakdown is illustrated below:

Element	Value	Rules for Use
MessageId	A unique reference associated with the application in the Case Management System	Mandatory
Reference	Customer reference often associated with a case in Case Management System	Mandatory
FeeInPence	Expected fee in pence	Optional
RefreshSearchReference	The RefreshSearchReference contains the SearchReference given in the response to the original search request. It is used to retrieve the original search criteria and provide a new search if within 6 months of the original search date.	Mandatory
TitleNumber	Land Registry Title number that will be used to identify the area of search required	Mandatory
GeoJson	GeoJson is used to identify coordinates of the search area required. It is included within a CDATA section to prevent this Character Data being parsed as markup.	Mandatory
PropertyDescription	Text describing property being searched. This is included in the search result document, but the data is not verified or used to identify the search area.	Mandatory (With a TitleNumber search <u>or</u> a GeoJson search)
Indicators	Search Indicators to enable/disable specific checks See IndicatorType for more details.	Mandatory

10.2.1 Options to define area of search

A request comprises one of the following three options:-

1. RefreshSearchReference (to refresh an existing search)
2. Title number search, plus PropertyDescription
3. GeoJson, plus PropertyDescription

10.2.2 IndicatorType (Request)

The 'Indicators' element may contain 0 or many IndicatorType elements. The value of these elements must be set to true or false in **lowercase**. If any of the IndicatorTypes are excluded from the Request message they will be set to the default values shown below.

Indicator Type Element	Value	Description	Default
ContinuelfOutOfHours	true	Request will be lodged and processed when back in hours	
	false	Reject request if out of hours	✓
ContinuelfFeeExceedsExpected	true	Continue if fee exceeds the fee given in the request	✓
	false	Reject if fee exceeds	

11 Local Land Charges Search Response (V1_0)

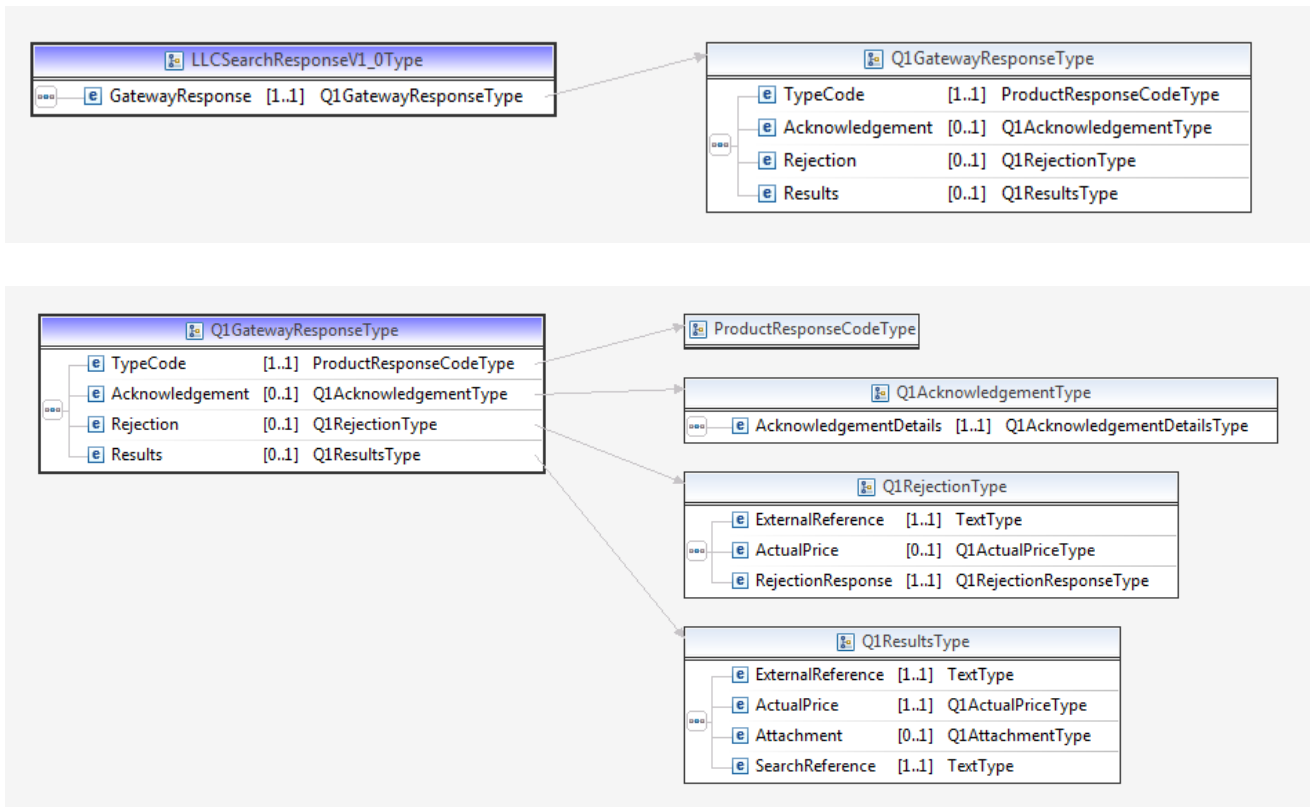

LLCSearchResponseV1_0 message uses the namespace

http://www.landregistry.gov.uk/LLC/LLCSearchResponseV1_0 and must be valid with respect to the XML Schema published by HM Land Registry for that namespace.

Message	Description
LLCSearchResponseV1_0	This message allows HM Land Registry to send the Local Land Charges Search Responses to the Customer.

11.1 Response message structure

The response message comprises generic information common with responses to other services, plus information specific to the LLCSearchResponseV1_0 response. This is illustrated below:

11.2 Response specific elements

Element	Description	Rules for Use
TypeCode	Used to identify the type of response that has been issued. Acknowledgement = 10 Rejection = 20 Result = 30	Mandatory
Acknowledgement	This is the Business Gateway confirmation of receipt response	Optional
Rejection	This is the Business Gateway rejection response	Optional
Result	This is the Business Gateway success response	Optional

Note: Either an acknowledgement, rejection or result message will be issued.

11.3 Acknowledgement response structure

The Acknowledgement message will be returned if the service is out of hours and the original request message had the indicator **ContinueIfOutOfHours** set to true.

If for any reason a valid acknowledgement, rejection or response is not received by the originator (i.e. through network error, corruption or incorrectly prepared XML) there is no way for the server to know if it was successfully received or not. If this occurs the request can be sent again with the same MessageId and the original result will be returned. If HMLR did not receive the original request the system will process the request as a new one.

Note: Any requests submitted with a duplicate MessageId will receive the last response for that MessageId regardless of the other criteria in the request.

The acknowledgement response structure is illustrated below:

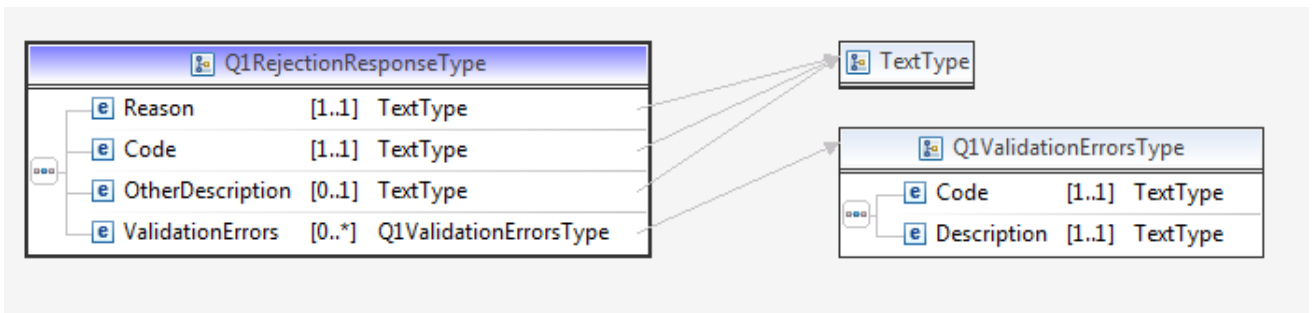

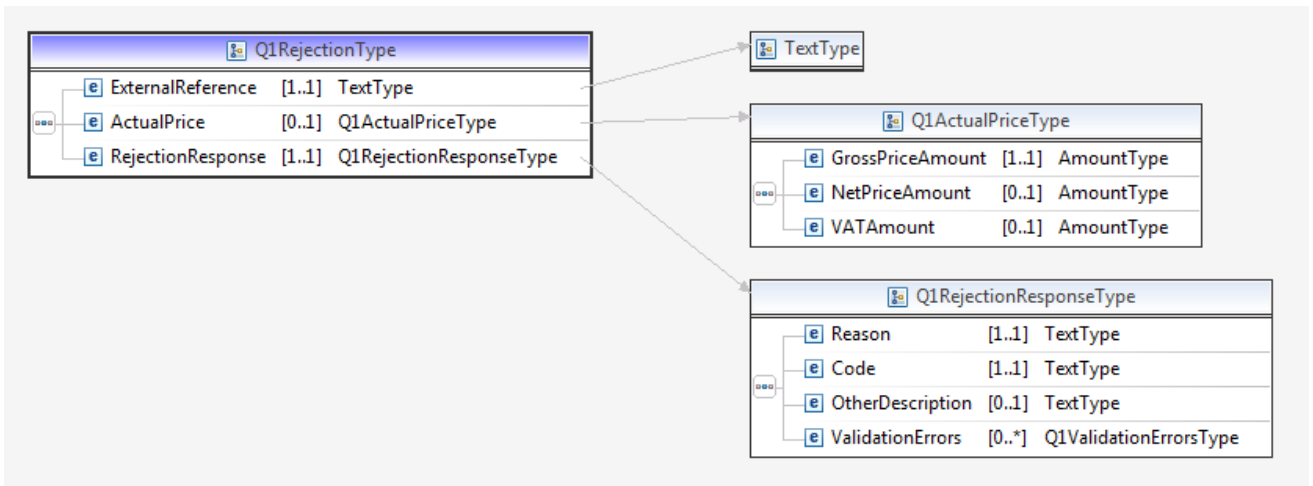

11.4 Acknowledgement specific elements

Element	Description	Rules for Use
UniqueID	A unique identifier used by the end user to get the status update of their request. This would be same value as the MessageId from the request.	Mandatory
ExpectedResponseDateTime	This element will hold the expected date and time when Business Gateway will try to process the queued request. This element will contain date and time data in a GMT format.	Mandatory
MessageDescription	This will be a String type element and will be used to return a message to the end user. See Annex for acknowledgement message text	Mandatory

11.5 Rejection response structure

The purpose of the Rejection message is to inform the originator of the Request message that it has been rejected due to known circumstances.

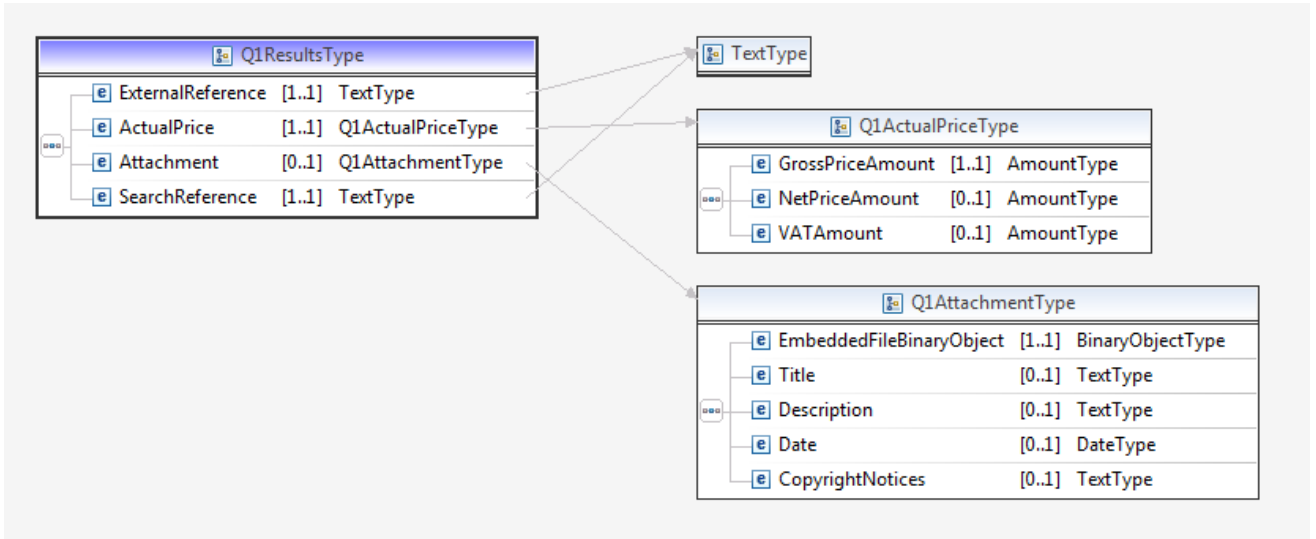

11.6 Rejection specific elements

Element	Description	Rules for Use
Reason	A description of the reason for rejection. See Annex for full list of rejection reasons	Mandatory
Code	A code signifying the reason for rejection. See Annex for full list of rejection codes	Mandatory
OtherDescription	A free format text field to convey any further information about the rejection.	Optional
ValidationErrors	Validation errors.	Optional
ExternalReference	Customer reference often associated with a case in Case Management System and as provided in Reference element of request	Mandatory

11.7 Result response structure

11.8 Result key elements

Element	Description	Rules for Use
ExternalReference	Customer reference often associated with a case in Case Management System and as provided in Reference element of request	Mandatory
ActualPrice	Fee charged in pence, which will be charged under the direct debit for the Business Unit associated to the user submitting the search.	Mandatory
Attachment	This will hold the search results in a PDF document	Mandatory
SearchReference	The HM Land Registry reference for this search response. This is then used for a refresh search in element RefreshSearchReference	Mandatory

12 Glossary Or Terms And Abbreviations

Acronym	Description
LLC	Local Land Charges
HTTP	HyperText Transfer Protocol
XML	eXtensible Markup Language
Registered on date	The date HM Land Registry received the application

13 Annex

13.1.1 Acknowledgement Message

Message

Service is not currently available. System has queued your request, please poll at specified time.

13.1.2 Rejection Codes

Code	Reason
bg.auth.fails	Login details are invalid.
bg.user.account.status.locked.password	Your account is locked. Please reset your password using Portal.
bg.outofhours.stop	Service is not currently available and your request will not be processed
bg.title.invalid	Title number is invalid.
bg.title.closed	This title number is closed.
bg.llc.title.closedAndContinued	Title Number * has been closed and registration continued under Title Number *. Please request a search using the new Title Number.
bg.title.no.geojson	Unable to obtain GeoJSON from title number please try again with GeoJSON data
bg.geojson.invalid	The supplied GeoJSON is not valid
bg.nonmigrated.extent	You are searching a non-migrated authority, edit your search area or contact the local authority
bg.fee.feeMismatch	Fee Amount provided does not match with the fee calculated by Land Registry.
bg.llc.access.denied	Access denied, this service has limited availability - please contact HM Land Registry
bg.llc.search.ref.not.found	Search reference not found, refresh searches are valid for 6 months after the initial search
bg.document.maxFileSizeLimitExceeds	Generated PDF exceeds maximum size of 20971520 bytes
bg.geojson.size.exceeded	GeoJSON exceeds maximum length of 32000 characters
bg.too.many.results	Your search area has too many charges. Email HM Land Registry to search this area: locallandchargesregister@landregistry.gov.uk

13.1.4 Schemas

XML Schemas are compliant with e-GIF (Electronic Government Interoperability Framework) standards.

Schema files are named according to the standard *<filename>-vm-n.xsd* where *v* is the letter 'v', *m* is the major version number and *n* is the minor version number.

13.1.5 LLCSearchRequestV1_0.xsd
