

MGN 536 (M)

Amendment 3

Safety Management Code For Domestic Passenger Ships

Notice to all Shipowners, Operators, Charterers and Managers; Masters, Officers and Seamen

This notice should be read in conjunction with MSN 1869(M) and replaces MGN 158(M). This Notice has been amended to clarify when the intermediate audit needs to be completed (paragraph 2.7).

Summary

This note provides further guidance to owners and operators of Domestic Passenger Ships on how to comply with the Audit and Self-Assessment requirements of the Safety Management Code for Domestic Passenger Ships as set out in the amended Merchant Shipping Notice MSN 1869(M). Whilst the Code itself remains substantially unchanged the frequency of the audits are very different and are intended to more closely follow the ISM format, but applied in a more pragmatic way.

Key points:

- There is a requirement for the MCA to carry out a company or office audit and that some preparation work is required for the same.
- The On-board Audits, whilst less frequent, shall also be pre-planned and operators will be required to demonstrate compliance with the code including emergency preparedness.
- There is a requirement for Companies to carry out Self-Assessments to review their own systems.
- This Guidance also takes the opportunity to explain how companies should undertake
 the annual Self-Assessment and a review of the safety management system at
 intervals not exceeding three years.
- The Checklist under Annex 1 has been amended to align with the requirements of Domestic Safety Management (DSM)

1. Introduction/ Background

1.1 The Merchant Shipping (Domestic Passenger Ships) (Safety Management Code) Regulations 2001, SI 2001/3209 came into force on 01 November 2001 and gave statutory force to the Safety Management Code for Domestic Passenger Ships as set out in Merchant Shipping Notice MSN 1869(M).

- 1.2 The purpose of this Marine Guidance Note is to provide guidance on how to prepare for the Audits specified in the amended MSN 1869 and how to carry out the Self-Assessments required by the Code.
- 1.3 It is recognised that there are a wide variety of passenger ships in the domestic trade and that they are employed in a variety of operational locations and conditions. The purpose therefore of developing the Code is to establish a common standard of safe operation for these ships.
- 1.4 The Code applies to passenger ships which are not otherwise required to comply with the requirements of the International Safety Management (ISM) Code.
- 1.5 Operators are reminded that the Safety Management System (SMS) should be brief and simple and be developed by each company to meet the needs of that company.
- 1.6 The sections below give more detailed advice on what is required to ensure an efficient process.

2. Office or Company Audit.

- 2.1 These will vary according to the complexity of company operations and will take place once in five years. The date of this audit will be recorded on the DSM certificate for each vessel.
- 2.2 For the larger domestic passenger vessel operators, and those that have an office, the process would be essentially similar to ISM DOC audits and it is not envisaged that such companies will have any difficulty with preparing for such an audit.
- 2.3 For smaller operators and sole owner single boat operations, where there is no office, and where records may be spread between different locations, ALL records associated with the boat, the equipment, the crew and her operations should be gathered in one place to simplify and shorten the time needed for the audit to be carried out. This could be a mutually convenient location on board the vessel or at the MCA marine office.

2.4 Papers will include:-

- The Safety Management Manual;
- The Company Policy document:
- All crew certification and training records;
- Passenger counting and recording records;
- On-board maintenance records (checklists);
- ALL other maintenance and repair records including that carried out by shore side contractors;
- Certification appertaining to the above including machinery, life rafts, fire equipment etc;
- Accident and incident reports and any remedial actions taken thereof;
- Evidence of company reviews of SMS, Self-Assessment Reports and closeouts thereof:
- Evidence of Proactive Designated Person;
- Garbage records;
- Code of Safe Working practices;
- Records of Drills and Safety Training:
- Procedures for disposal of oily residue/waste oil etc.

3. On board MCA Audits

- 3.1 There are two on-board audits in the five-year period: The **Initial** and a **mid-term or Intermediate**. Ideally these should be conducted with the vessel in commission but out of service, although, some elements, such as passenger boarding arrangements, mooring and navigation may be carried out in service.
- 3.2 There is flexibility with carrying out the mid-term / intermediate audit as this could be completed between the 2nd and 3rd anniversary dates of the DSM certificate (the anniversary date is the date of expiry of the certificate), but it is anticipated that many owners will request to carry out these audits in conjunction with the completion of the Passenger Certificate survey, to save on Surveyor travel time. This may be done if the date falls within the window of the intermediate audit. At every audit, the surveyor will witness the crew performing a drill. This will have to be borne in mind, as some owners may not have crew present, or necessarily adequately trained at the time of the preseason running trial.

4. Self-Assessment

- 4.1 The Self-Assessment must be completed annually by the owner/operator or on behalf of the owner/operator by an "accredited person". An accredited person is someone external to the company who has a good knowledge of the operation of domestic passenger ships and ideally should have some experience in carrying out audits. It is envisaged that as time passes expertise in the industry will develop.
- 4.2 The owner/operator is encouraged to develop his/her own operations specific checklist which must include all of the elements of DSM and shall ensure all aspects of the operation are included. The Self-Assessment Checklist should follow the format and form of the DSM Code and will assess company performance against the SMS, which would have been written to meet the DSM criteria. In the case of some companies which may have some vessels operating under ISM or have previously elected to comply with the ISM Code, then, whilst the order of the codes differs slightly, it will be considered acceptable and equivalent to follow the form and order of ISM for both the SMC and the Audit/Assessment process.
- 4.3 As with audits the Self-Assessment is expected to find differences between what is required by rules/regulations and / or the company's own set out standards. These differences found during an audit are divided into non-conformances (deviation(s) from the requirements) and observations (situations which may, in future, lead to deviation(s) from the requirements). The assessor, at least in the early years may not be confident to divide them up and thus the outcome may be described as: Points for Improvement or similar. Regardless, these elements shall be considered by the owner within agreed timeframes (closeout). The MCA will be the final arbiter as to whether or not the agreed closeout action and timeframe is reasonable. It is accepted that some points for improvement which have not yet resulted in a deviation from any requirements, may result in no improvement action being implemented this shall be documented.
- 4.4 Appended to this notice as appendices 1 and 2 are: a checklist which operators may find useful as a basis for their own checklists and the DSM Self-Assessment Report Form. The DSM checklist and the Self-Assessment Report need to be sent to the local MCA marine office every year.
- 4.5 There are other scenarios where MCA might require further additional audits. Additional audits may be required in the following circumstances: 1) for a new boat or when a boat changes ownership and there is no objective evidence to complete a full audit; on such occasions, the initial DSM audit would need to be followed by an additional audit when the

vessel is in service within 3-6 months; 2) a major non-compliance with the Domestic Safety Management System/Code has been identified with the operator or vessel; and 3) if the DSM Self-Assessment Report Form has not been received by MCA before 31 July in any relevant year.

5. Periodic Review

- 5.1 There are two separate requirements which should not be confused: Self-Assessments and periodic review of the SMS. The periodic review should be an opportunity for a critical review of the performance of the SMS over the past three years. Audit reports, inspection reports, non-conformities, accident reports, risk assessments, permits to work, near miss reports, complaints, etc. should be reviewed with the object of identifying trends, root causes, areas of concern, etc., with a view to continually improving the operation of the SMS both ashore and on board.
- 5.2 The periodic review of the SMS should be carried out by the company. This review will form part of the safety management strategy of the Company and will be conducted in accordance with documented procedures.
- 5.3 For larger companies, the management review meetings should be recorded and corrective actions allocated to appropriate members of the company, with a view to improvement.
- 5.4 For smaller operators, including single owner/operator/skipper enterprises, the periodic review performed by management will by default, become part of the annual assessment. Records should be made available to demonstrate that the SMS review has been carried out and that resultant changes to the SMS are summarised.

6. Certification

6.1 Following satisfactory completion of the office and vessel audits by the MCA, each vessel will be issued with a DSM Certificate, the validity of which should not exceed five years. The validity of this certificate is subject to a mid-term / intermediate MCA audit of each vessel between the 2nd and 3rd anniversary dates, the annual Self-Assessments of the company and each vessel, carried out by the company.

24	Are hours of work compliant with the working time directive			
	PROCEDURES TO ENSURE SAFE OPERATION OF SHIPS			
25	Are procedures available for the following operations as a minimum:			
	Testing of equipment, including steering gear, prior to commencing a passage			
	Navigation and handling of the ship including in restricted visibility			
	Maintenance routines			
	Fuelling operations			
	Watertight integrity			
	Stability of the ship and conduct of passengers and crew while on board			
	Mooring and unmooring			
	Passenger counting and crowd control			
	Machinery checks including safety and noise protection			
26	Are the above procedures incorporated into checklists where appropriate			
27				
28	Crew awareness of the on-board procedures			
	Garbage plan available / understood and placards displayed			
29	Oil management plan available and understood			
30	Crew understand how to dispose of oily waste			
	Are suitable and sufficient risk assessments completed by the owner			
32	How are owners advised that procedures are being followed			
00	PROCEDURES FOR REPORTING ACCIDENTS			
33	Accident/Incident reporting procedure in place.			
34	Review logbook/accident book			
35	Master aware of MAIB and MCA reporting requirements			
36	Evidence of Corrective actions being implemented by the operator			
	PROCEDURES FOR RESPONDING TO EMERGENCY SITUATIONS			
37	Do procedures for emergencies include at least the following scenarios:			
	Collision			
	• Fire			
	Abandon ship			
	Flooding			
	Grounding			
	Loss of steering gear			
	Medical emergency			
	• MOB			
	Aid to other vessels			
	Fuel/oil spill/pollution			
	Enclosed space rescue if applicable			
38	Emergency situations tested and exercised Date of last exercise:			
39	Records of exercises/drills including personnel/debrief/plan MSN 1783			
40	Are crew proficient in the operation of LSA and FFE			
41	Service reports for FFE/LSA on board			
42	SAR plan on board and up to date			
	EQUIPMENT			
43	Equipment critical to the vessel operating safely has been identified, e.g. engines,			
	steering gear, lifesaving equipment, etc.			
44	Maintenance programme for ship & equipment - evidence of implementation			
45	Daily/weekly/monthly checklists in use for inspections			
46	Are defects reported and dealt with in a timely manner			
	REVIEW			
47	DSM manual reviewed every three years
