Footnotes

r. Revised
p. Provisional

- The tables refer to the number of individuals whose personal pension (including stakeholder pension) has received a contribution during the year. Years 2001-02 to 2005-06 can now be found on the National Archives website.
- Employment status is based on what is reported to the provider by an individual when making their original application.
- Average contributions include individual, employer and government minimum contributions, plus any basic rate tax relief that a pension provider has been able to claim on an individual's contribution.
- Contributions are based on what has actually been contributed in the year, so the overall average will not be the typical annual average for those who have started making regular contributions part of the way through the year.
- Components may not sum to their total due to rounding.

Notes on the table

- The table shows the number of individuals contributing to a personal pension by employment status. It also shows the average annual contribution per individual. The data is derived from annual personal pension information submitted to HM Revenue & Customs by pension providers in respect of each individual scheme member.
 - The data is collected primarily for compliance purposes and contains details of contributions made by, or on behalf of, individuals. Providers have only been required to report in the detail published since 2001-02. Prior to 6 April 2001, the self-employed claimed any relief due on their contributions through Self Assessment and providers did not have to report details of these individuals. Therefore analyses on a comparable basis are not available for years prior to 2001-02.
 - As well as containing individual details, such as name and date of birth, the data also contains their National Insurance number. Using this it is possible to aggregate across those who have arrangements with one or more providers. Therefore, unlike tables PEN2, 2.1 & 2.2 which are based on aggregate returns from providers and can only record numbers of contributors, these results are presented in terms of numbers of individuals. Providers report the status of the individual scheme members in the following categories:
 - Employee
 - In receipt of a pension
 - Self-employed
 - Child
 - Carer of either a child aged less than 16 or a person aged 16 or over
 - In full-time education
 - Unemployed
 - Other
 - The table relates to the number of individuals who have a recorded contribution in the year - either individual, employer or government minimum. Whilst in theory the data should give us details of all individuals, in practice due to incorrect or missing data less than 100% of records are available for analysis. Simple grossing has been used to remedy this shortfall.
- v. All statistical tables PEN1 - PEN5 containing information on personal pensions no longer contains any information relating to master trusts. Data for master trusts has been removed from all tables for this year's publication - reflecting the fact that master trusts are in fact occupational pension schemes, even though HMRC receives information on these schemes from administrative relief at source pension data.
