Seasonal influenza vaccine uptake amongst GP patients in England

Provisional monthly data for
1 September 2014 to 30 November 2014

This collection has received approval from the Standardisation Committee for Care Information (SCCI), the new national gateway body for care information collection request

Seasonal flu vaccine uptake (GP) 2014/15 - DATA ON GP REGISTERED PATIENTS

PROVISIONAL end of November 2014 cumulative uptake data for England on influenza vaccinations given from 1 September 2014 to 30 November 2014

FOOTNOTES

This collection has received approval from the Standardisation Committee for Care Information (SCCI), the new national gateway body for care information collection requests.

1. Data are provisional and represent 96.1% of all GP practices in England responding to the November 2014 survey compared with 95.6% of practices in the same survey month in 2013/14

Where a total for England is quoted (e.g. sum of number of patients registered and number vaccinated) this is taken from the 96.1% GP practice sample and is therefore NOT an extrapolated figure for all of England.

2. For definitions of clinical at-risk groups for those aged 6 months to under 65 years, see annual flu Letter published on the GOV.UK at:

https://www.gov.uk/government/uploads/system/uploads/attachment_data/file/316007/FluImmunisationLetter2014_accessible.pdf

3. The age under 65 clinical at-risk group data includes pregnant women with other risk factors but excludes otherwise 'healthy' pregnant women and carers.

4. These data include all women already pregnant or becoming pregnant (in the first, second or third trimesters) as diagnosed by a medical professional from 1 September 2014.

Accurately identifying this denominator is challenging and denominators may be regarded as over-inclusive as they may include women that become eligible and then ineligible before they are vaccinated. Vaccine uptake for pregnant women is likely to be underestimated.

5. The 2014/15 survey and data set has been modified to include all four years old (but not five years or older) including at-risk groups.

6. New optional dataset categories for Gender and Ethnicity are not included in this month's data collection due to an IT system error.

All figures are derived from data as extracted from records on GP systems or as submitted by GP practices or area teams and CCGs.

FOOTNOTES

This collection has received approval from the Standardisation Committee for Care Information (SCCI), the new national gateway body for care information collection requests.

1. Data are provisional and represent 96.1% of all GP practices in England responding to the November 2014 survey compared with 95.6% of practices in the same survey month in 2013/14. Where a total for England is quoted (e.g. sum of number of patients registered and number vaccinated) this is taken from the 96.1% GP practice sample and is therefore NOT an extrapolated figure for all of England.
2. For definitions of clinical at-risk groups for those aged 6 months to under 65 years, see annual flu Letter published on the GOV.UK at: https://www.gov.uk/government/uploads/system/uploads/attachment_data/file/316007/FulmunisationLetter2014_accessible.pdf
3. The age under 65 clinical at-risk group data includes pregnant women with other risk factors but excludes otherwise 'healthy' pregnant women and carers.
4. These data include all women already pregnant or becoming pregnant (in the first, second or third trimesters) as diagnosed by a medical professional from 1 September 2014. Accurately identifying this denominator is challenging and denominators may be regarded as over-inclusive as they may include women that become eligible and then ineligible before they are vaccinated. Vaccine uptake for pregnant women is likely to be underestimated.
5. The 2014/15 survey and data set has been modified to include all four years old (but not five years or older) including at-risk groups.
6. New optional dataset categories for Gender and Ethnicity are not included in this month's data collection due to an IT system error.

All figures are derived from data as extracted from records on GP systems or as submitted by GP practices or area teams and CCGs.

FOOTNOTES

This collection has received approval from the Standardisation Committee for Care Information (SCCI), the new national gateway body for care information collection requests.

1. Data are provisional and represent 96.1% of all GP practices in England responding to the November 2014 survey compared with 95.6% of practices in the same survey month in 2013/14

Where a total for England is quoted (e.g. sum of number of patients registered and number vaccinated) this is taken from the 96.1% GP practice sample and is therefore NOT an extrapolated figure for all of England.

2. For definitions of clinical at-risk groups for those aged 6 months to under 65 years, see annual flu Letter published on the GOV.UK at:

https://www.gov.uk/government/uploads/system/uploads/attachment_data/file/316007/FluimmunisationLetter2014_accessible.pdf

3. The age under 65 clinical at-risk group data includes pregnant women with other risk factors but excludes otherwise 'healthy' pregnant women and carers.

4. These data include all women already pregnant or becoming pregnant (in the first, second or third trimesters) as diagnosed by a medical professional from 1 September 2014.

Accurately identifying this denominator is challenging and denominators may be regarded as over-inclusive as they may include women that become eligible and then ineligible before they are vaccinated. Vaccine uptake for pregnant women is likely to be underestimated.

5. The 2014/15 survey and data set has been modified to include all four years old (but not five years or older) including at-risk groups.

6. New optional dataset categories for Gender and Ethnicity are not included in this month's data collection due to an IT system error.

All figures are derived from data as extracted from records on GP systems or as submitted by GP practices or area teams and CCGs.

FOOTNOTES

This collection has received approval from the Standardisation Committee for Care Information (SCCI), the new national gateway body for care information collection requests.

1. Data are provisional and represent 96.1% of all GP practices in England responding to the November 2014 survey compared with 95.6% of practices in the same survey month in 2013/14

Where a total for England is quoted (e.g. sum of number of patients registered and number vaccinated) this is taken from the 96.1% GP practice sample and is therefore NOT an extrapolated figure for all of England.

2. For definitions of clinical at-risk groups for those aged 6 months to under 65 years, see annual flu Letter published on the GOV.UK at:

https://www.gov.uk/government/uploads/system/uploads/attachment_data/file/316007/FluimmunisationLetter2014_accessible.pdf

3. The age under 65 clinical at-risk group data includes pregnant women with other risk factors but excludes otherwise 'healthy' pregnant women and carers.

4. These data include all women already pregnant or becoming pregnant (in the first, second or third trimesters) as diagnosed by a medical professional from 1 September 2014.

Accurately identifying this denominator is challenging and denominators may be regarded as over-inclusive as they may include women that become eligible and then ineligible before they are vaccinated. Vaccine uptake for pregnant women is likely to be underestimated.

5. The 2014/15 survey and data set has been modified to include all four years old (but not five years or older) including at-risk groups.

6. New optional dataset categories for Gender and Ethnicity are not included in this month's data collection due to an IT system error.

All figures are derived from data as extracted from records on GP systems or as submitted by GP practices or area teams and CCGs.
