Child development outcomes at 2 - 2½ years
Quarter 1 2018/19 Statistical Commentary (October 2018 release)
About Public Health England

Public Health England exists to protect and improve the nation’s health and wellbeing, and reduce health inequalities. We do this through world-leading science, knowledge and intelligence, advocacy, partnerships and the delivery of specialist public health services. We are an executive agency of the Department of Health and Social Care, and a distinct delivery organisation with operational autonomy. We provide government, local government, the NHS, Parliament, industry and the public with evidence-based professional, scientific and delivery expertise and support.

Data quality  
Validation rules  
Summary of Quarter 1 data  
  - Indicator C6iii: percentage of children who were at or above the expected level in communication skills  
  - Indicator C6iv: percentage of children who were at or above the expected level in gross motor skills  
  - Indicator C6v: percentage of children who were at or above the expected level in fine motor skills  
  - Indicator C6vi: percentage of children who were at or above the expected level in problem solving skills  
  - Indicator C6vii: percentage of children who were at or above the expected level in personal-social skills  
  - Indicator C6viii: percentage of children who were at or above the expected level in all five areas of development  
Data quality notes
Main findings

The proportion of children at or above the expected level in all five areas of development in England is 84.3% (with confidence intervals 84.0% - 84.5%) for Quarter 1, 2018/19 (April to June 2018).

This is higher than Quarter 1, 2017/18, based on final figures published in October 2018.

The proportion of children at or above the expected level in all five areas of development at a PHE centre level can be published for all PHE Centres.

The proportion of children at or above the expected level in all five areas of development can be published for 105 local authorities with complete submissions, and percentages range from 47.0% to 97.0%.

This statistical commentary should be considered alongside the 2018/19 Quarter 1 Child development outcomes at 2 – 2½ years statistical release, which can be found at https://www.gov.uk/government/publications/child-development-at-2-to-2-and-a-half-years-metrics-2018-to-2019.

Please treat the figures with caution. Where totals are presented for England and PHE centres, these are aggregate totals of the areas that submitted information and passed initial validation.

Background

From 2015 all children in England became eligible for a Healthy Child Programme development review, delivered as part of the universal health visitor service, around their second birthday. The Ages and Stages Questionnaire (ASQ-3™) was identified through research to be suitable for generating data for a population measure of child development outcomes and from testing with parents and professionals to be acceptable for use in practice.

ASQ-3™ is not a screening tool, but does provide an objective measure of development and allows comparisons to be made helping to identify children who are not developing as expected and supporting decisions on closer monitoring of progress or targeting of services. Dimensions of development which are tested include communication, gross motor, fine motor, problem solving and social / emotional skills.

In October 2015, the responsibility for commissioning children’s public health for the 0 to 5 years’ population transferred from NHS England to local authorities. To support this transfer, Public Health England established an interim data collection for a number of key performance indicators associated with these services, which it is critical to monitor and report. The strategic reporting solution hosted by NHS Digital, the Community Services Dataset, is collecting relevant data items directly from providers’ systems and in time will take on reporting of these indicators. This data, which is intended to support the generation of indicators for the Public Health Outcomes Framework, is continually increasing in coverage and quality.

The information on child development outcomes in this publication has been obtained via the interim reporting system. It was submitted to PHE by local authorities on a voluntary basis. It covers Quarter 1 of 2018/19, which is the fifth reporting period for the child development outcomes. The full service data can be found at https://www.gov.uk/government/publications/child-development-at-2-to-2-and-a-half-years-metrics-2018-to-2019.

The data on child development outcomes reported here are from supplementary metrics for the number of health visitor reviews completed at 2-2½ years using ASQ-3™ (Ages and Stages Questionnaire):

- C6iii: percentage of children who were at or above the expected level in communication skills
- C6iv: percentage of children who were at or above the expected level in gross motor skills
- C6v: percentage of children who were at or above the expected level in fine motor skills
- C6vi: percentage of children who were at or above the expected level in problem solving skills
- C6vii: percentage of children who were at or above the expected level in personal-social skills
- C6viii: percentage of children who were at or above the expected level in all five areas of development
These metrics are presented as management information and are reported by local authority, PHE centre and England level.

**Data collection method**

An interim reporting system is hosted on the Local Government Association (LGA) website to collect the data on health visiting indicators. The reporting window for Quarter 1 data was 6 August to 14 September 2018.

To support local authorities in submitting data, detailed guidance was circulated to explain how analysts and commissioners in local authorities should submit health visiting indicators. A dedicated mailbox (interimreporting@phe.gov.uk) was also in place to respond to questions and comments.

Once the collection window closes the data received is centrally collated, validated and reported. This process will be repeated quarterly.

**Data quality**

The following data relates to Quarter 1, 2018/19

146 reporting local authorities submitted a return for the interim reporting collection for Quarter 1 2018/19. The four local authorities that did not submit data are Blackburn with Darwen, Cheshire East, Cumbria, and Solihull.

108 local authorities submitted data for at least one of the supplementary metrics, and 104 submitted data for all six supplementary metrics.

**Validation rules**

Local authorities submitting a nil return will be classed as a non-submission.

Areas which submit DK (don't know) for any metric are classed as incomplete submissions and are excluded from the relevant metric.

All complete submissions are included in their respective PHE centre and the England aggregated calculations.

A comprehensive breakdown of the results following the application of the validation can be found in the publication at https://www.gov.uk/government/publications/child-development-at-2-to-2-and-a-half-years-metrics-2018-to-2019.
Summary of Quarter 1 data

Indicator C6iii: percentage of children who were at or above the expected level in communication skills

The aggregate percentage of children at or above the expected level in communications skills (indicator C6iii) for England for Quarter 1 is 90.0% (with confidence intervals of 89.8% – 90.2%).

Values for percentages of children at or above the expected level in communications skills could be published for all PHE centres for Quarter 1. Values ranged from 84.8% to 95.6%.

The percentage of children at or above the expected level in communications skills could be published for 107 local authorities with complete submissions. Values ranged from 49.6% to 100.0%, with the majority (101) reporting between 80% and 100%.

Indicator C6iv percentage of children who were at or above the expected level in gross motor skills

The aggregate percentage of children at or above the expected level in gross motor skills (indicator C6iv) for England for Quarter 1 is 93.5% (with confidence intervals of 93.3% – 93.7%).

Values for percentages of children at or above the expected level in gross motor skills could be published for all PHE centres for Quarter 1. Values ranged from 88.3% to 97.2%.

The percentage of children at or above the expected level in gross motor skills could be published for 107 local authorities with complete submissions. Values ranged from 52.5% to 100%, with the majority of areas with complete submissions (102) reporting between 80% and 100%.

Indicator C6v percentage of children who were at or above the expected level in fine motor skills

The aggregate percentage of children at or above the expected level in fine motor skills (indicator C6v) for England for Quarter 1 is 94.1% (with confidence intervals of 94.0% – 94.3%).

Values for percentages of children at or above the expected level in fine motor skills could be published for all PHE centres for Quarter 1. Values ranged from 88.3% to 99.2%.

The percentage of children at or above the expected level in fine motor skills could be published for 107 local authorities with complete submissions. Values ranged from
52.3% to 100.0%, with the majority of areas with complete submissions (104) reporting between 80% and 100%.

**Indicator C6vi percentage of children who were at or above the expected level in problem solving skills**

The aggregate percentage of children at or above the expected level in problem solving skills (indicator C6vi) for England for Quarter 1 is 94.4% (with confidence intervals of 94.2% – 94.5%).

Values for percentages of children at or above the expected level in problem solving skills could be published for all PHE centres for Quarter 1. Values ranged from 89.4% to 98.2%.

The percentage of children at or above the expected level in problem solving skills could be published for 107 local authorities with complete submissions. Values ranged from 52.5% to 99.9%, with the majority of areas with complete submissions (103) reporting between 80% and 100%.

**Indicator C6vii percentage of children who were at or above the expected level in personal-social skills**

The aggregate percentage of children at or above the expected level in personal-social skills (indicator C6vii) for England for Quarter 1 is 93.1% (with confidence intervals of 92.9% – 93.2%).

Values for percentages of children at or above the expected level in personal-social skills could be published for all PHE centres for Quarter 1. Values ranged from 88.3% to 98.0%.

The percentage of children at or above the expected level in personal-social skills could be published for 107 local authorities with complete submissions. Values ranged from 52.0% to 100.0%, with the majority of areas with complete submissions (103) reporting between 80% and 100%.

**Indicator C6viii percentage of children who were at or above the expected level in all five areas of development**

The aggregate percentage of children at or above the expected level in all five areas of development (indicator C6viii) for England for Quarter 1 is 84.3% (with confidence intervals of 84.0% – 84.5%).

Values for percentages of children at or above the expected level in all five areas of development could be published for all PHE centres for Quarter 1. Values ranged from 79.6% to 89.1%.

The percentage of children at or above the expected level in all five areas of development could be published for 105 local authorities with complete submissions.
Values ranged from 47.0% to 97.0%, with the majority of areas with complete submissions (77) reporting between 80% and 100%.

Data quality notes

When making a submission, local authorities have the opportunity to enter comments in a free text box to explain any issues with reporting. During the Quarter 1 submission, comments were received from 8 local authorities related to child development outcomes, of collective interest:

8 local authorities reported they knew, or suspected, that they had made an incomplete submission. This may include receiving confirmation of nil returns from neighbouring authorities.

5 local authorities reported that recent migration to a new Child Health Information System or problems with their existing system had impacted on their ability to submit, or on the short-term reliability of the figures.

4 local authorities submitted data which is not internally consistent, such as data for sub-indicators C6iii-C6vii but no data for indicator C6viii, or data for indicator C6viii but missing data for one or more sub-indicators.

Data quality has improved since data collection commenced in Quarter 1, 2017/18. 108 local authorities submitted data for at least one indicator in Quarter 1, 2018/19, compared to 71 in Quarter 1, 2017/18.
