The number of children in need at 31st March, and number of episodes starting in the year have increased. Episodes ending in the year have decreased.

**Figure A: Number of children in need starting in the year, ending in the year, and at 31st March**

England, 2013-2018

The number of children in need at 31st March has increased this year, from 389,040 in 2017 to 404,710 in 2018, an increase of 4.0%.

The number of episodes of need starting in the year has risen by 1.7% from 400,110 to 406,770, whereas the number of episodes ending in the year fell by 1.3% from 353,860 to 349,130.

The number of children who were the subject of a child protection plan at 31st March continues to follow the upward trend of recent years.

**Figure B: Number of child protection plans starting in the year, ending in the year and at 31st March**

England, 2013-2018

The number of child protection plans at 31st March has increased this year, from 51,080 in 2017 to 53,790 in 2018, an increase of 5.3%.

The number of child protection plans starting and ending during the year both continue to increase.

The number of child protection plans starting has increased by a larger percentage (3.6%), than those ending (0.8%).
About this release
This statistical publication provides the latest information on the number of referrals to children’s social care, assessments carried out upon those children and whether the child became the subject of a child protection plan. All the figures included in this publication are taken from the children in need census. The DfE has been collecting the children in need census from local authorities for each full 12 month period since 2009-10.

When a child is referred to children’s social care, an assessment is carried out to identify if the child is in need of services, which local authorities have an obligation to provide under section 17 of the Children Act 1989. These services can include, for example, family support (to help keep together families experiencing difficulties), leaving care support (to help young people who have left local authority care), adoption support or disabled children’s services (including social care, education and health provision).

In this publication
The following tables are included in the statistical publication:
• National and local authority tables (Excel .xls)
• Underlying data (open format .csv and metadata .txt)

A data quality and uses document and methodology document accompany this statistical publication. These documents provide further information on the data sources, their coverage and quality and explains the methodology used in producing the data, including how it is validated and processed.

1. Children in need (Tables A1, A3, B1, B2, B4)

Methodology for counting the number of children in need episodes

A child can start or end an episode of need more than once during the year, but they should not have overlapping episodes. For example, if a child begins an episode of need in May 2017, which ends in August 2017, and the same child begins another episode of need in December 2017 and is still in need on the 31 March 2018, the child is counted as two starts, one end and one count at the 31 March 2018. Therefore, the number of children in need these episodes relate to (i.e. a de-duplicated child count) will accompany all episode level measures. A more detailed explanation is given in the accompanying methodology document and the data quality and uses document found alongside this publication at: Statistics: children in need and child protection

Changes to the children in need population time series

We have improved the way that we deal with cases that remain open across different census years within the current publication and have recalculated the full time series of data consistently. Please see the dedicated section in the data quality and uses document, entitled ‘Children in need population figure time series changes’, which covers these changes in detail.

The definition of what is counted as a child in need remains unchanged, and the number of episodes of need at the 31 March is largely unaffected by the changes.

The changes have impacted on the “episodes ending in year” and “episodes at any point in year” metrics, and in particular more recent years. The number of episodes open at “any point” in the year series previously reported slight year on year decreases since 2014-15. In the revised time series these decreases are larger than previously reported. For episodes ‘ending’ during the year the trend between 2013-14 and 2014-15 has reversed from an increase of 1.7%, to a decrease, of 2.4%. For the following years the trend remains in the same direction.

</tbody>
</table>

Source: Children in need census

The number of children in need at 31st March has increased this year, from 389,040 in 2017 to 404,710 in 2018, an increase of 4.0%. There was also a increase in the rate of children in need per 10,000 in the population, from 330.1 in 2017 to 341.0 in 2018. There is considerable variability in the rate of children in need per 10,000 children aged under 18 years in the population at a local authority level (see main tables or underlying data).

The number of children in need at 31st March has fluctuated over the last six years. At its lowest, it was 378,030 in 2013, and has risen to its highest level in the current year at 404,710. However, the rate per 10,000 children aged under 18 years in the population was at its highest in 2014.

For the first time this year the number of children in need who were awaiting assessment at 31 March has also been presented. As at 31 March this year 26,130 (6.5%) children were waiting to undergo an assessment by children’s services. While they are counted as children in need in this publication, these cases may go on to be assessed ‘not in need’, and would therefore be no longer be counted as a ‘child in need’. The number of children awaiting assessment at 31 March has remained relatively stable over the last six years.
The number of children in need episodes starting in the year has increased, from 400,110 in 2017 to 406,770 in 2018, an increase of 1.7%. The number of episodes ending in the year has decreased from 353,860 in 2017, to 349,130 in 2018, a decrease of 1.3%.

The increase in episodes starting in the year, coupled with the decrease in episodes ending in the year contributes to the rise in the number of children in need at 31 March.

Of the episodes ending in the year, 22.4% lasted a year or more in 2018, compared to 22.8% in 2017.

Source: Children in need census

Characteristics of children in need

The gender split of children in need at 31st March 2018 was 53.0% male, and 45.0% female, with 2.0% being unborn or of unknown gender.

The age split of children in need at 31st March 2018 remains broadly similar to previous years, with the largest age group being those aged 10-15 years, who account for 31.7% of children in need. Children aged under 5 account for 22.5%.

Of the children in need whose ethnicity is known, 72.6% were white, followed by 8.6% that were black or black British, and 8.4% who were of a mixed ethnic background.

The percentage of children in need with a disability recorded has decreased this year from 12.9% in 2017 to 12.3% in 2018. This percentage has fluctuated over the last six years, however there has been an overall decrease, from 13.8% in 2013.

2. Referrals (Tables A1, C1, C5)

Definition: referral and re-referral

A referral is defined as a request for services to be provided by children’s social care and is in respect of a child who is not currently in need. A referral may result in: an assessment of the child’s need; the provision of information or advice; referral to another agency; or no further action. If a child is referred more than once in the year then each referral is counted in the figures. New information relating to children who are already on an open episode of need is not counted as a referral.

A re-referral is where a child has been referred within 12 months of a previous referral. Further details on how these figures are calculated can be found in the accompanying methodology document found alongside this publication at: Statistics: children in need and child protection.

Figure J: Number of referrals in the year ending 31st March

England, 2013-2018

The number of referrals in the year ending 31st March has increased this year, from 646,120 in 2017 to 655,630 in 2018, an increase of 1.5%.

The number of children who were the subjects of these referrals in the year ending 31st March 2018 was 581,280, this equates to an average of 1.13 referrals per child. This rate has gradually decreased since 2013 when it was 1.16 referrals per child.
The percentage of all referrals in the year ending 31st March that were within 12 months of a previous referral has remained at 21.9% in 2018.

The percentage of referrals in the year ending 31st March that resulted in no further action after initial consideration has decreased, from 10.2% in 2017 to 9.4% in 2018, a decrease of 0.8 percentage points (ppts).

The percentage of referrals in the year ending 31st March that were assessed as not in need has increased, from 27.8% in 2017 to 28.5% in 2018, an increase of 0.7 ppts. However the proportion of referrals that are closed with no further action, or assessed not in need, has remained similar to last year at 37.9%.
The majority of referrals come from the police – this year 28.5% of referrals were from the police, followed by schools with 18.2%, and health services with 14.8%.

Across the course of the year referrals follow a seasonal pattern, with referrals peaking in June (9.4%) and November (9.5%), and dipping in April (6.8%), August (7.1%) and December (7.0%).

The dips in referral numbers in April, August and December coincide with major holiday periods throughout the year, and the peaks tend to precede the summer and end of year holidays.
3. Assessments (Tables A1, B3, C2, C3)

Past policy changes to assessing children in need
Statutory guidance 'Working Together to Safeguard Children' was revised in 2013 giving local authorities more flexibility when assessing children. Previously local authorities carried out an initial assessment within 10 working days and (where needed) a more in-depth core assessment within 35 working days. Local authorities now have the flexibility to carry out a single continuous assessment within 45 working days.

The number of assessments completed in the year ending 31st March has increased this year, from 606,910 in 2017 to 631,090 in 2018, an increase of 4.0%. The average (median) duration of assessment in 2018 was 31 working days, an increase of 2 working days from 2017.

As there have been major changes to the process of carrying out assessments, comparisons to numbers prior to 2015 are not recommended.

Primary need identified at assessment (Table B3)

Methodology for identifying primary need at assessment
When a child is assessed following a referral, the practitioner determines the child’s primary need at this first assessment. Only one need can be reported here and the list of primary needs is hierarchical, so in cases where multiple needs are identified, the need highest in the list is reported in the census.

The categories are designed only to identify what kinds of pressures are placed on children’s social services. The order of the categories relate to the specificity of the description and not necessarily importance. However, the order is fixed so that there is consistency.

This year 482,750 of 631,090 (76.5%) of assessments had factors identified that contributed to the child being in need.

Abuse or neglect was the most common primary need at assessment for children in need at 31st March 2018. This year 53.2% of children in need at 31st March had ‘abuse or neglect’ as their primary need identified at assessment, followed by family dysfunction with 15.4%, and child’s disability or illness at 8.7%.

</tbody>
</table>
Factors identified at the end of assessment (Table C3)

Methodology for identifying need at end of assessment
Factors identified at the end of assessment are in addition to the primary need identified at assessment and were collected and reported for the first time three years ago.
If more than one factor has been identified at assessment, each can be reported within the census. Most children will have more than one factor identified and reported.
The quality of the data on factors identified at assessment may be less robust than other data returned through the collection. We are reliant on the data as it is provided by local authorities, and due to its nature this information can be volatile and may be subjective due to being based on the opinion of the social worker assessing the case. Care should be taken when drawing comparisons using this information, in particular at a local level.

Figure P: Percentage of assessments with factors identified, by factors identified at the end of assessment
England, 2018

This year 482,750 of 631,090 (76.5%) of assessments had factors identified that contributed to the child being in need. This is a 2.2% increase from last year when there were 472,440 assessment with factors identified.

Domestic violence, which includes that aimed at children or other adults in the household, was the most common factor identified at end of assessment for children in need at 31st March 2018 – this year 51.1% of assessments had domestic violence as a factor identified, followed by mental health at 42.6%, which incorporates mental health of the child or other adults in the family/household.
Figure Q: Year on year change in numbers of factors identified at the end of assessment between 31 March 2017 and 31 March 2018
England, 2017-2018

Notes: Number indicates change in total number of assessments in which a factor was identified from 2017.

Since 2017 most assessment factors have risen in number. In terms of numbers of assessments, the biggest increases were for mental health, and domestic violence. Some less common categories have seen larger increases in percentage terms, though they remain relatively uncommon overall - particularly ‘trafficking’ and ‘gangs’.

4. Section 47 enquiries and initial child protection conferences (Table A2)

Section 47 enquiry and initial child protection conference
If the local authority identifies there is reasonable cause to suspect the child is suffering, or is likely to suffer significant harm, it will carry out an assessment under section 47 of the Children Act 1989 to determine if it needs to take steps to safeguard and promote the welfare of the child. If concerns are substantiated and the child is judged to be at continuing risk of harm then an initial child protection conference should be convened within 15 working days.
The number of section 47 enquiries within the year has increased, from 185,680 in 2017 to 198,090 in 2018, an increase of 6.7%.

The number of children who were the subject of these section 47 enquiries during the year was 177,110, this equates to an average of 1.12 Section 47s per child. This figure has been increasing consistently since 2013 when it was 1.08 Section 47s per child, and indicates that some children are subject to multiple Section 47 enquiries.

There was also an increase in the number of initial stage child protection conferences which took place in the year, from 76,930 in 2017 to 79,470 in 2018, an increase of 3.3%. The number of children who were subject to these initial stage child protection conferences during the year was 78,490, equating to a mean of 1.01 ICPCs to each child, this has remained stable since 2013.

Whilst the number of referrals which go on to a Section 47 has increased, the proportion of Section 47s that lead to an initial child protection conference was 40.1% in 2018. This has been steadily decreasing over time from 47.2% in 2013.

5. Child protection plans

Child protection plan

At the initial child protection conference, the decision will be made as to whether the child needs to become the subject of a child protection plan. When a child becomes the subject of a plan, the initial category of abuse is recorded. Plans should be reviewed within the first three months, and then at least every six months.

A child should no longer be the subject of a plan if it is judged they are no longer at risk of harm, or if the child has reached 18 years old, left the country or died. A local authority will end a plan if the family moves permanently to another authority and the receiving authority will start a new plan if deemed necessary.
The number of children who were the subject of a child protection plan at 31st March has increased this year, from 51,080 in 2017 to 53,790 in 2018, an increase of 5.3%.

The number of child protection plans starting during the year has increased from 66,410 in 2017 to 68,770 in 2018, an increase of 3.6%. The number of children starting these child protection plans in 2018 was 68,590.

The number of child protection plans ending during the year was 65,920 in 2018, this increased slightly from last year’s figure of 65,420, an increase of 0.8%. The number of children ending a child protection plan in 2018 was 65,720, an increase of 0.8%.

The percentage of children who had been the subject of a child protection plan for longer than three months at 31st March, and who had reviews carried out within the required timescales has decreased this year, from 92.1% in 2017 to 90.5% in 2018.

Figure T: Percentage of children in need at 31 March 2018, by initial category of abuse
England, 2013-2018

Neglect was the most common initial category of abuse for children in need who were the subject of a child protection plan (48.0% in 2017-18), followed by emotional abuse (35.1%).

Figure S: Number of child protection plans starting in the year, ending in the year and at 31st March
England, 2013-2018
6. Accompanying tables

The following tables are available in Excel format on the department’s statistics website (Statistics: children in need and child protection):

National tables

8. National Statistics

The United Kingdom Statistics Authority has designated these statistics as National Statistics, in accordance with the Statistics and Registration Service Act 2007 and signifying compliance with the Code of Practice for Official Statistics.

Designation can be broadly interpreted to mean that the statistics:

- meet identified user needs;
- are well explained and readily accessible;
- are produced according to sound methods, and
- are managed impartially and objectively in the public interest.

Once statistics have been designated as Official Statistics it is a statutory requirement that the Code of Practice shall continue to be observed.

The Department has a set of statistical policies in line with the Code of Practice for Official Statistics.
9. Technical information

A data quality and uses and methodology document accompany this statistical publication. These documents provide further information on the data sources, their coverage and quality and explains the methodology used in producing the data, including how it is validated and processed.
