# Reducing the risk of the spread of TB through the movement and trading of cattle

Pre- and post- movement TB testing is used to help reduce the risk of spread of TB through movements of cattle. This booklet tells you how to meet these statutory TB testing requirements when moving cattle in England, Wales and Scotland and across the borders of each country.

The pre-movement and post-movement testing rules differ between England, Wales and Scotland, so please read this booklet carefully.

## Background

Bovine tuberculosis (TB) is an infectious and contagious disease of cattle caused by the bacterium *Mycobacterium bovis* (*M. bovis*). All mammalian species, including humans, are susceptible to bovine TB. It is mainly a respiratory disease, transmission can occur through nose to nose contact and also through contact with saliva, urine, faeces and milk. Cattle can become infected when directly exposed to infectious cattle (or other infectious animals) and their excretions.

The movement of cattle with undetected infection is the most likely way that disease spreads to new areas. In particular, movements of cattle from high bovine TB incidence areas of GB pose a substantial risk of introducing the infection to the lower incidence areas of England and Wales and to Scotland, which has been officially free of TB since September 2009.

While it is not possible to fully eliminate the risk of TB spreading through undetected infection, ensuring that cattle moved into your herd receive a pre- and/or post- movement TB test will reduce the risk of introducing this disease into your herd.

Our current strategies are based on maintaining the Officially TB Free status in Scotland and eradicating TB in England and Wales. TB movement testing contributes to these strategies by reducing the risk of disease spread through movements and trading of cattle across GB.

The different TB movement testing regimes in England, Scotland and Wales reflect regional variations in disease incidence, including the Officially TB Free status of Scotland.

## General information for all cattle herd owners

Pre- and post-movement tests reduce the risk of spreading TB between herds. For these types of tests only the skin test can be used.

Pre- and post-movement tests must be arranged and paid for by the herd owner. However, routine TB surveillance tests paid for by the Government count as pre- and post- movement tests for 60 days provided that the test fits the requirements for the movement.

If you do not have a government-funded test arranged or recently completed that will qualify for the movement, you will need to arrange this test with your private vet who must be an Official Veterinarian (OV) registered in the APHA cattle testing panel and authorised to carry out TB testing.

Pre-movement tests are valid for 60 days (from the date of the injection, which is day zero of the 60 day period). Post-movement tests must be carried out between 60 and 120 days after the movement on to your premises. In England and Wales, and in Scotland from 12 December 2018, cattle that need a post-movement test must not be moved from your premises until the test has been completed 60-120 days after arrival, unless the move meets one of the exemptions.

Clear TB test charts (TB52c) provide confirmation that the tested cattle can be moved. You are required to keep these charts for three years and 60 days as evidence of TB testing. You are also advised to keep evidence for at least three years if cattle have been moved without a test because the herd or movement is exempted from pre-movement testing rules. You are likely to be asked for copies of relevant evidence by recipient cattle keepers seeking buyer assurance. You should also share information on the disease and testing history of your herd to help the buyer make a decision about the level of risk and how to manage it. This information is also available on the TB test chart.

Please be aware that failure to have your cattle TB tested within the testing deadline advised by APHA may be considered a breach of the Statutory Management Requirements applying under the cross compliance rules of the CAP farm subsidy schemes, which could result in a reduction being applied to your CAP scheme payments and may also affect the compensation paid if reactors are disclosed.

The different testing requirements in England, Wales and Scotland are summarised below. You are legally obliged to meet the requirements of the country in which you are

based. But, if you are moving cattle between different parts of GB, you need also to be aware of the testing requirements placed on the herd that is receiving your cattle

## Keepers in England

Pre-movement testing was introduced in England in 2006.

All cattle 42 days old and over moving out of an annually or more frequently tested herd must have tested negative to a TB test within 60 days before movement (unless the herd or type of movement meets any of the exemptions listed in the table on pages 7 and 8).

Pre-movement tests must be arranged by the herd owner. Herd owners must also pay for their pre-movement tests, though cattle can be moved following a clear government funded surveillance test.

Herd owners are advised to give their Official Veterinarian plenty of notice to ensure they can move their cattle when they want to.

Herd owners are given a copy of all clear test charts, indicating that they can move the tested cattle.

Post-movement testing was introduced in England on 6 April 2016.

Herd owners in the Low Risk Area (LRA) of England must arrange and pay for post-movement tests for cattle bought from herds in annual (or more frequent) surveillance testing areas of England and Wales.

Post-movement testing is not required for cattle slaughtered within 120 days of arriving in the LRA or that are moved to a Licensed Finishing Unit approved by APHA (unless the cattle have had no pre-movement test). A complete list of exemptions is listed in the table on pages 9 and 10.

Tests must be completed between 60 and 120 days after an animal has joined an LRA herd. Government-funded TB tests scheduled to take place within the 60-120 day post-movement testing window can be considered valid post-movement tests.

Cattle that must be post-movement tested cannot be moved off the premises (other than to slaughter either directly or via a slaughter gathering, or to a Licensed Finishing Unit or an Approved Finishing Unit) until the test has been completed with negative results unless under a licence issued by an Inspector.

Please visit the TB Hub at: <http://www.tbhub.co.uk/guidance/testing-and-compensation/post-movement-testing-in-lra/> for more information on this policy.

## Keepers in Wales

Pre-movement testing was introduced in Wales in 2006 and legislation in 2010 made some changes to the exemptions to pre-movement testing requirements. There are further changes in the amended legislation coming in to force on 1 October 2017.

All cattle 42 days old and over moving out of an annually or more frequently tested herd must have tested negative to a TB test within 60 days before movement (unless the herd or type of movement meets any of the exemptions listed in the table on pages 7 and 8).

All pre-movement tests must be arranged and paid for by the herd owner.

Herd owners are advised to give their Official Veterinarian plenty of notice so they can move their cattle when they want to.

Routine TB surveillance tests paid for by the Government count as pre-movement tests for 60 days for animals included in that test.

From 1 October 2017, cattle moving off from herds that have recently had restrictions lifted after a persistent breakdown cannot use the releasing breakdown test as a pre-movement test. Keepers will have to arrange a further test at least 60 days after their previous test for any cattle moving off. A persistent breakdown is one that lasts for 18 months (540 days) or more.

Herd owners are given a copy of all clear test charts, where the herd is eligible to move cattle.

Owners of cattle eligible for a pre-movement test in Wales may use a sticker, which is applied to the passport, with the date of the last clear TB test on that individual animal.

Post-movement testing was introduced in Wales on 1 October 2017.

Herd owners in the Low TB Area of Wales must arrange and pay for post-movement tests for cattle moving on from the High and Intermediate TB Areas of Wales or from High Risk and Edge Areas of England.

Post-movement testing will not be required for cattle slaughtered within 120 days of arriving in the Low TB Area or that are moved to a Licensed Finishing Unit approved by APHA. A complete list of exemptions is listed in the table on pages 9 and 10.

Tests must be completed between 60 and 120 days after an animal has moved into the Low TB Area. Government-funded TB tests scheduled to take place within the 60-120 day post-movement testing window can be considered valid post-movement tests.

Cattle that must be post-movement tested cannot be moved off the premises (other than to slaughter either directly or via a slaughter gathering, or to an Approved Finishing Unit) until the test has been completed with negative results unless under a licence issued by an inspector.

## Sole Occupancy Authorities (SOAs)

From 1 October 2014 the Pre-movement testing SOA exemption has been removed in both England and Wales.

With the changes in the rules for use of temporary land, pre and post-movement testing is not required between permanent land and any temporary land linked through a Temporary Land Association (TLA). Pre and post-movement testing is still applicable for movements between permanent land and temporary CPHs (TCPH).

In England, until the roll-out of the new arrangements for the use of temporary land, pre-movement testing was not required for moves between holdings within SOAs that only included holdings within 10 miles of the main farm. Such movements are still permitted for those SOAs that have not yet been revoked under the terms of a general licence issued by Defra available at [https://www.gov.uk/government/publications/general-licence-for-the-movement-of-cattle-  
within-sole-occupancy-authorities](https://www.gov.uk/government/publications/general-licence-for-the-movement-of-cattle-within-sole-occupancy-authorities).

In Wales, cattle keepers who already possessed a SOA were able to apply for an Interim Land Association Management (ILAM) agreement allowing them to move cattle between premises within the ILAM without having to have a Pre movement test. This was an interim measure designed specifically to bridge the gap between the removal of the exemption to pre-movement testing for movements within SOAs and the completion of the ongoing County Parish Holding (CPH) review process when new arrangements are being introduced. Such movements are still permitted for those ILAMs that have not been revoked yet

## The exemptions from pre-movement testing (England and Wales)

Some lower risk cattle movements are exempted from pre-movement testing. These exemptions are listed below. You should keep documentary evidence of cattle you move under these exemptions for at least three years. You may be asked for copies of relevant evidence by those who purchase your cattle or in the event of enforcement action.

The table below i) outlines the herds and movements exempted from pre-movement testing; and ii) provide examples of evidence you are advised to keep.

Exemption	Evidence
Cattle moving from herds in England or Scotland subject to four yearly routine TB testing	The letter issued by APHA informing the keeper of the routine TB testing interval for their cattle
Cattle originating from the four year testing areas in England but on more frequent testing regimes due to public health concerns: <ul style="list-style-type: none"> <li>• open farms</li> <li>• producers/retailers of raw milk</li> </ul>	The letter issued annually by APHA informing the keeper of the routine TB testing interval for their cattle
Cattle moving from herds in the Low TB Area of Wales unless the herd is due to have 6 and 12 month post-breakdown testing or is due for any contiguous testing, including 6 and 12 month contiguous tests.	The letter from APHA informing the keeper that the holding is in the Low TB Area of Wales
Cattle at an artificial insemination (AI) centre in England	The approval licence issued by APHA
Cattle under 42 days old	Cattle passports

<p>Cattle moving directly to:</p> <ul style="list-style-type: none"> <li>• slaughter (including via a collecting centre)</li> <li>• a market from which all animals go direct to slaughter</li> <li>• Pre-movement Exempt Finishing Units (EFU)</li> <li>• Pre-movement Exempt Markets (EM)</li> <li>• Approved TB Finishing Units (AFU)</li> <li>• Approved TB collection centres</li> </ul>	<p>On-farm cattle movement records and details of market designations such as market catalogues</p>
---	---

<p>Cattle moving to an exempt agricultural show (provided that the animal is returned to the premises of origin or moved direct to slaughter)</p> <p>A show will be classed as exempt if:</p> <ul style="list-style-type: none"> <li>• no cattle are to remain on the showground for a period of 24 hours or more and</li> <li>• in England, no cattle are to be housed i.e. any covered area with sides, which includes a marquee</li> <li>• in Wales, no cattle are to be housed i.e. any covered area with or without sides, which includes a marquee</li> </ul>	<p>A declaration from the show that it is eligible for exemption</p>
<p>Cattle moving for veterinary treatment (provided that the animal is returned to the premises of origin or moved direct to slaughter)</p>	<p>Records of veterinary treatment On-farm cattle movement records On-farm medicines records</p>
<p>Cattle moving under specific written exemption granted by APHA.</p>	<p>Written exemption from APHA</p>

<p>In England all cattle aged 42 days or over moving to and from common land in the annual testing area must be pre-movement tested. However, the following exemptions may apply:</p> <p>For movements back from the common, farmers can carry out a post-movement test instead to reflect the fact that in most cases, TB testing on common land is impractical.</p> <p>APHA will consider licensing some cattle movements without pre-movement testing where veterinary judgement is that an agreed TB ‘control plan’ for the whole common gives at least the same level of assurance as testing would provide. Commoners associations should contact their local APHA office to discuss setting up these local plans.</p>	<p>Documentary evidence of rights of common.</p> <p>Documentary evidence of an agreed TB Control Plan for the common, including a commitment to record the movement of cattle to and from the common land.</p>
--	--

## The exemptions from post-movement testing (England and Wales)

<p>The movement of a bovine animal directly to one of the following premises in the Low Risk Area of England or the Low TB Area of Wales:</p> <ul style="list-style-type: none"> <li>• a market from which all animals go directly to slaughter</li> <li>• an exempt market(England only)</li> <li>• an approved collecting centre</li> <li>• a licensed finishing unit (England only)</li> </ul>	<p>On-farm cattle movement records and details of market designations such as market catalogues.</p>
<p>Cattle moving from the LRA of England to the Low TB Area of Wales.</p>	<p>Cattle movement recorded on passport.</p>
<p>Cattle that are slaughtered within 120 days of arrival at the receiving premises in the LRA of England or the Low TB Area of Wales.</p>	<p>On-farm cattle movement records.</p>

<p>Cattle moving for veterinary treatment (provided that the animal is returned to the premises or origin or moved direct to slaughter).</p>	<p>Records of veterinary treatment On-farm cattle movement records On-farm medicines records.</p>
<p>Cattle moving to an exempt agricultural show (provided that the animal is returned to the premises of origin or moved direct to slaughter).</p> <p>A show will be classed as exempt if:</p> <ul style="list-style-type: none"> <li>• no cattle are to remain on the showground for a period of 24 hours or more and</li> <li>• in England, no cattle are to be housed i.e. any covered area with sides, which includes a marquee</li> <li>• in Wales, no cattle are to be housed i.e. any covered area with or without sides, which includes a marquee</li> </ul>	<p>A declaration from the show that it is eligible for exemption.</p>
<p>Wales only - Cattle born into and moving from a herd which is a member of a CHeCS TB cattle health scheme and is certified at Level 10 as free of TB for 10 years</p>	<p>Certificate from keeper of CHeCS Level 10 herd with the eartag details of the cattle moved.</p>
<p>Cattle moving under specific written exemption granted by APHA.</p>	<p>Written exemption from APHA.</p>

**The exemptions to move an animal from the receiving premises in the LRA of England or the Low TB Area of Wales pending completion of post-movement testing (England and Wales)**

<p>The movement of a bovine animal directly to one of the following premises:</p> <ul style="list-style-type: none"> <li>• directly (or via a slaughter gathering or market) to slaughter</li> <li>• an approved finishing unit or</li> <li>• an approved licensed finishing unit (England only)</li> </ul>	<p>On-farm cattle movement records and details of market designations such as market catalogues.</p>
<p>Cattle moving under specific written exemption granted by APHA.</p>	<p>Written exemption from APHA.</p>

## Keepers in Scotland

Pre- and post-movement testing was introduced in Scotland in September 2005.

All cattle 42 days old and over in a two yearly or more frequently testing area must be pre-movement tested before they move from or enter any Scottish herd, within 60 days prior to the move.

Exemptions to pre-movement testing:

- cattle being sent to Scotland direct for slaughter
- cattle moving to shows/exhibitions and returning to their farm of origin
- cattle born and kept at all times on premises in a low incidence area (including any cattle which have been moved from premises in a low incidence area to an agricultural show or a market in a high incidence area)

All cattle moving from a two yearly or more frequently testing area must be post-movement tested between 60-120 days after their arrival in a Scottish herd.

Exemptions to post-movement testing:

- Cattle which are slaughtered within 120 days of arrival on the Scottish holding.
- Cattle that are moved for the purpose of veterinary treatment provided they are returned directly to their farm of origin or for slaughter.
- Cattle that are moved under the authority of a licence issued by a veterinary inspector

Cattle imported from Northern Ireland and the Republic of Ireland must also be post-movement tested between 60 and 120 days of their arrival in a Scottish herd unless they will be slaughtered within 120 days of import.

From 12 December 2018, cattle that must be post-movement tested cannot be moved off the farm of arrival in Scotland (other than to slaughter within 120 days or for veterinary treatment) until the test has been completed with negative results unless under a licence issued by an inspector.

Pre- and post-movement tests must be arranged and paid for by the herd owner. However, routine TB surveillance tests paid for by the Government count as pre- and post- movement tests for 60 days in a Scottish herd provided that the test complies with the requirements for the movement.

You are advised to keep evidence of tuberculin tests for three years. Herd owners are given a copy of the test results where the herd is eligible to move cattle. It is in your best interest to keep such evidence as you may be asked for copies of relevant evidence by recipient cattle keepers seeking buyer assurance or in the event of enforcement action.

APHA monitors the movements of animals and compliance with the testing requirements. Checks are carried out and where non-compliance is discovered whole herd movement restrictions are imposed.

Pre and postmovement testing is not required for cattle movements to shows/exhibitions if animals return from the show/exhibition to the farm of origin, although it should be noted that some show organisers may request the cattle are TB tested before going to the show. Cattle awaiting a post-movement test following a previous move from a high incidence area, or from Northern Ireland or the Republic of Ireland cannot be moved to a show/exhibition before the test is completed with negative results.

Cattle in an annual or more frequent testing area going to a market should be pre-movement tested if there is a possibility that they could then be moved to a different holding in Scotland. Purchasers are advised to make enquiries at the point of sale. .

# Cross border movements

## Movements from England and Wales into Scotland

English and Welsh herd owners must adhere to their country's rules for pre-movement testing when moving cattle out of England or Wales.

Scottish herd owners will want to make sure that any cattle 42 days old and over from the annual or more frequent testing areas in England and from Wales moving into their herd are pre-movement tested. If this has not been done, the Scottish keeper will have to pay for a pre-movement test and whole herd restrictions will be applied until the test is completed with negative results. A post-movement test on these cattle will also be required between 60 and 120 days after arrival in Scotland (and at least 60 days after the previous test)..

Additionally cattle 42 days old and over moving from herds that are subject to 4 yearly testing in England (including herds subject to annual or more frequent testing in the four yearly testing area) must be pre-movement tested, unless they have since birth resided in a low incidence area (the four yearly testing area in England). These cattle do not need to be post-movement tested between 60-120 days of their arrival in a Scottish herd.

## Movements from Scotland into England and Wales

Scottish herd owners must adhere to the Scottish rules for pre-movement testing when moving cattle out of Scotland. There may be occasions where animals do not need to be pre-movement tested under Scottish law but English and Welsh recipients may request it e.g. for cattle from annual or more frequent testing herds unless they fall within one of the exemptions.

## Exempt Markets and Pre-movement Testing Exempt Finishing Units

Pre-movement testing Exempt Markets can be approved in England and Wales but Pre-movement Testing Exempt Finishing Units can only be approved in England. Exempt Finishing Units were phased out in Wales by 1 January 2018.

### Pre-movement Testing Exempt Finishing Units

These provide a route for beef producers to finish animals for slaughter without the need to pre-movement test.

In England only, operators may accept other cattle into the unit if they wish i.e. cattle that have completed a pre-movement test and also cattle exempt from pre-movement testing. Pre-movement Exempt Finishing Units must be approved by APHA and meet strict conditions designed to minimise the risk of disease spread from the premises.

Onward movements are restricted to slaughter, either direct to the slaughterhouse or via an approved slaughter market.

Further details and a list of the current premises approved to operate as exempt finishing units within England are available at: <https://www.gov.uk/government/publications/exempt-finishing-units-for-cattle-approved-premises>

## Exempt Markets

In England, these markets are primarily for the sale of cattle that have not been pre-movement tested.

Market operators may also accept other cattle into an Exempt Market if they wish. Onward movements are restricted to direct to slaughter; direct to an exempt finishing unit; direct to an approved finishing unit in a yearly (or more frequent) testing area or back to the premises of origin except for cattle from four yearly tested herds which are not permitted to return to the premises of origin.

In Wales, Exempt Markets are primarily for the sale of cattle from annually or more frequently tested herds that have not been pre-movement tested but that should have been. Onward movements are restricted to direct to slaughter; direct to an exempt finishing unit; direct to an approved finishing unit in a yearly (or more frequent) testing area or back to the premises or origin.

A list of some of the exempt markets in England and Wales is available at:

<https://www.gov.uk/government/publications/exempt-markets-for-cattle-approved-premises>

For further details, please contact your local APHA office or market operator.

<https://www.gov.uk/government/organisations/animal-and-plant-health-agency/about/access-and-opening>

## Contact us and other information

Contact details for your local APHA office

<https://www.gov.uk/government/organisations/animal-and-plant-health-agency/about/access-and-opening>

For information regarding policy, and general enquiries about the changes affecting England, please contact the Defra Helpline on 03459 33 55 77 or by email to [defra.helpline@defra.gsi.gov.uk](mailto:defra.helpline@defra.gsi.gov.uk).

Further information can also be found at

<https://www.gov.uk/government/policies/reducing-bovine-tuberculosis>

For information regarding policy, and general enquiries about the changes affecting Scotland, please contact the Scottish Government on 0300 244 9874 or by email to [Animal.Health@gov.scot](mailto:Animal.Health@gov.scot)

Further information can also be found at <http://www.scotland.gov.uk/>

For information regarding policy, and general enquiries about the changes affecting Wales, please contact the Welsh Government on 0300 060 3300 (English speakers) or 0300 060 4400 (Welsh speakers) or by email to [bovineTB@wales.gov.co.uk](mailto:bovineTB@wales.gov.co.uk)

Further information can also be found at:

<http://wales.gov.uk/topics/environmentcountryside/ahw/disease/bovinetuberculosis/cattlecontrols/pre-movement-testing/?lang=en>

You can also contact the BCMS Helpline to discuss CTS issues. The helpline is open 8:30am to 5pm from Monday to Friday and can be contacted on 0345 050 1234 (or 0345 050 3456 Welsh language).

If you need to set up a temporary CPH or register a new permanent one in England, contact the RPA Customer Registration Team on 0845 603 7777 and choose Option 6. It is important to note that setting up a new CPH can take up to 10 working days, so allow sufficient time before moving your animals. In Scotland contact your local [Scottish Government Rural Payment and Inspection Division \(SGRPID\) Office](#). In Wales contact [Rural Payments Wales \(RPW\)](#) on 0300 062 5004

Further information can also be found at <https://www.gov.uk/get-a-cph-number-from-the-rural-payments-agency>

## Commonly asked questions

### What is my herd testing interval?

Your herd TB testing interval will be set out in your last TB testing interval statement sent by APHA. Most herd testing intervals are set to the testing interval of their area. However, a small number of herds in lower TB risk areas are tested more frequently than others in their

area for disease control purposes or due to the type of business. These include city or open farms, artificial insemination (AI) centres, producers/retailers of raw milk and raw milk products, heifer rearers, dealer herds, regular importers of Irish cattle and bull hirers. If you are not clear what testing frequency you are on, contact your local APHA office. Some herds in Scotland are exempt from routine testing as Scotland is Officially Tuberculosis Free (OTF).

### **Can I find out about other testing areas?**

Yes, a map showing the testing intervals for different parts of the country can be found at:

<https://www.gov.uk/guidance/bovine-tb-testing-intervals-2018>

### **Can a herd test count as a pre-movement test?**

Yes, as long as the cattle are moved within 60 days of their clear test (60 days after the injection date of the skin test)

### **Can a herd test count as a post-movement test?**

Yes, but this only applies if the animals have been on the holding for at least 60 days at the time of the test. If they are tested earlier, then a further post-movement test will be required.

### **What if I bring animals into my herd within 60 days prior to my routine surveillance test being carried out, do they have to be tested?**

If they have not been TB tested within the last 60 days they must be included within your herd's surveillance test. If they have been tested within the 60 days before your herd's surveillance test they will not need to be re-tested. In Scotland the animals must have been on the holding for at least 60 days at the time of the test for it to qualify as a post-movement test. If they are tested earlier then a further post-movement test will be required.

You should discuss which animals need to be tested with your Official Veterinarian (OV) or an APHA Veterinary Inspector. They may need to see proof of the dates of the pre-movement test.

### **I am thinking of sourcing stock from another herd, can I find out about their testing history?**

Local APHA offices cannot give out individual herd details. However, you should request this information from the vendor. Before bringing new animals onto your premises, you are advised to request evidence that a test has been carried out within the 60 days preceding the proposed movement date or evidence that the herd is exempt from pre-movement

testing. Asking for information about the disease history of an animal and the herd it comes from will help you make a decision about the level of risk and how to manage it.

### **Who can carry out TB pre- or post-movement tests?**

All TB tests must be carried out by authorised TB testers. This would be an Official Veterinarian for pre and post movement tests, your private vet will usually be appointed as an authorised tester.

### **How much will my Official Veterinarian charge?**

This is a private transaction between you and your Official Veterinarian.

### **Do I have to pre-movement test cattle going to and from grass keep?**

Yes, unless the herd or movements meet any of the exemptions listed on pages 7 and 8.

### **Do animals moving on to premises in Scotland, which will be going for slaughter within 120 days of arrival, have to be pre- and post-movement tested?**

Cattle moving directly to slaughter in Scotland are not required to be tested. Cattle moved for further fattening before slaughter do become subject to the pre-movement test. Post-movement testing is also required if slaughter is after 120 days of arrival in Scotland.

### **How will I know if I need to pre-movement test my cattle before going to shows in England and Wales?**

Your show organiser will be able to advise you on the requirements for their show.

### **Can I take cattle to multiple shows?**

A clear pre-movement test is valid for 60 days from the date of the test. Therefore animals can be moved to more than one show during that post-test period provided that the last movement back to the home premises or to slaughter, if applicable, is completed within 60 days of the test date. You should not book a TB test to take place within 60 days of completion of the previous TB test as this will not be regarded as an authorised test. Cattle returning to holdings in the LRA or Low TB Area of Wales from non-exempt shows must remain on the holding until a post-movement test is completed. In Wales there is an exemption to this by using a certified Quarantine Unit.

### **I operate a SOA in England that includes holdings in areas subject to yearly routine TB tests only. Will I be affected by the revoked exemption for SOAs?**

Yes, unless you can comply with the conditions of the General Licence issued by Defra in England, or have been granted an Interim Land Association Management (ILAM) agreement in

Wales. Further information referring to the removal of the SOA exemption can be found at <https://www.gov.uk/government/publications/bovine-tb-information-note-changes-to-tb-cattle-movement-controls-exemptions>

**I operate a SOA in England that includes holdings in annual or more frequent routine TB testing areas and four yearly testing areas; do I have to pre-movement test cattle moved within my SOA?**

Yes; further information referring to the removal of the SOA exemption is available at:

<https://www.gov.uk/government/publications/bovine-tb-information-note-changes-to-tb-cattle-movement-controls-exemptions>

**I operate a SOA in Wales and wish to know more about applying for an ILAM agreement?** A further Q&A referring specifically to the ILAM change is available at: <http://wales.gov.uk/topics/environmentcountryside/ahw/disease/bovinetuberculosis/cattlecontrols/pre-movement-testing/question-and-answer/?lang=en>

**Do I have to pre-movement test cattle moving between linked holdings?**

Yes; unless the herd meets any of the exemptions listed on pages 7 and 8.

**Do I have to pre-movement test cattle moving to/from common land?**

Yes, as the default both in Wales (after 31st December 2015) and England.

**What happens if it is not possible or practical to pre-movement test my cattle before moving from common land?**

Please contact your local APHA office.

A further Q&A referring specifically to cattle kept at common land in Wales is available at: <http://gov.wales/topics/environmentcountryside/ahw/disease/bovinetuberculosis/cattlecontrols/pre-movement-testing/?lang=en>

### **What happens if a reactor is found through a pre-movement test?**

Your herd will be placed under movement restrictions and will be subject to the controls applied to a breakdown herd.

**What happens if I move cattle that were not pre-movement tested, and were not exempt?** APHA monitor cattle movement and cattle testing records and report suspected breaches to the local authorities to investigate non-compliance. Anyone found in breach of TB testing rules may be prosecuted and also face a reduction to their CAP scheme payments.

### **What happens if I receive cattle that were not pre-movement tested, and were not exempt?**

You should isolate the cattle as soon as possible, arrange and pay for a TB test to be carried out and inform your local APHA office. Where APHA detect that a herd in England or Wales has received cattle that have not had a TB test (within 60 days of their movement) and were not exempt from pre-movement testing, APHA will contact the receiving herd owner and place the cattle under movement restrictions specifying a date by which the received cattle must be tested. If this test is not completed, the whole herd will be placed under movement restrictions until the received cattle have been post-movement tested.

Where APHA detect that a herd in Scotland has received cattle that have not had a TB test (within 60 days of their movement) and were not exempt from pre-movement testing, APHA will contact the receiving herd owner and the whole herd will be placed under movement restrictions until the received cattle have had an immediate post-movement test, followed by a further post-movement test 60-120 days after their arrival in Scotland.

### **What happens if am located in Scotland and buy animals from a farm in Scotland that have recently come from a yearly testing area and have not yet been post-movement tested?**

From 12 December 2018, cattle required to have a post-movement test in Scotland must remain at the first farm of arrival until they have had a clear post-movement test. If cattle are moved to another farm in Scotland before the post-movement test has been completed, the vendor will be referred to the local authority and the buyer will be required to isolate the cattle and arrange for them to be tested 60-120 days after their arrival in Scotland.

### **What other measures can I take to reduce the risk of TB in my herd?**

All advice on bovine TB from government, farming experts, leading vets and agricultural colleges is now available from one single website: [www.tbhub.co.uk](http://www.tbhub.co.uk). This website was developed by and supported by Defra and a range of industry groups including the NFU and BCVA.

The TB Hub website contains information on other types of TB tests available to farmers to manage the risk to their herd, including pre-sale check tests for herds on 4 yearly surveillance testing. The TB Hub includes links to APHA leaflets on 'Dealing with TB in your Herd: How to reduce the risk of TB in your herd', and you can also find them here:

<https://www.gov.uk/government/publications/protecting-cattle-against-tb-infection-in-high-incidence-areas>

Farmers in Wales experiencing a TB breakdown are eligible for a free Cymorth TB visit by their local vet.
