

UK revenue from education related exports and transnational education activity in 2016

24 January 2019

UK revenue from education related exports and TNE activity increased to £19.9 billion in 2016, an increase of 26% since 2010.

UK revenue from education related exports and Transnational education (TNE) activities (£billions and current prices)

Total education exports and transnational education (TNE¹) activity was estimated to be £19.9 billion in 2016, an increase of 3.1% since 2015 in current prices. Since 2010, the estimated value of education related exports and TNE activity has risen by 26% in current prices.

Total education related exports were estimated to be £18.1 billion in 2016, and have increased by 22% since 2010. TNE activity was estimated to be £1.9 billion in 2016 and has grown by 73% since 2010, albeit from a lower base.

Higher Education accounts for 67% of the total revenue of education related exports and TNE activity.

UK revenue from education exports and TNE activity, 2016

Higher Education accounts for the largest share of revenue from education related exports and TNE activity. Higher Education Institutions contributed £13.4 billion (67%) of the total value. The revenue from other stages of education such as Further Education and Schools is comparably smaller at £0.3 billion and £0.9 billion, respectively.

¹ TNE – education programmes delivered ‘offshore’ either through partner institutions or directly through distance learning or international branch campuses

About this release

This statistical first release contains the latest estimates of education related exports and transnational education activity, for the calendar year 2016. The publication draws on previous years data, which has been published [here](#), to provide a picture of the trends over time. These estimates attach a monetary value to education related exports and TNE activity to understand the contribution made to the UK economy.

This SFR presents information on:

- The total contribution from education related exports and transnational education activity (TNE) to the UK economy from 2010 through to 2016
- The proportionate change in education related exports and TNE activity in 2015 compared to 2016
- The revenue streams comprising education related exports and TNE activity
- The proportionate share of revenue streams comprising education related exports and TNE activity
- The income from EU and non-EU students in terms of tuition fees and living expenditure

Technical document

Further detail on the methodology used to calculate education related exports and TNE activity can be found along side this publication.

Office of National Statistics (ONS), Pink Book

Readers should note that the export estimates in this publication are based on an experimental methodology designed to accurately estimate, using the latest available evidence and data, the different aspects of the UK's trade in education related goods and services. In doing so it seeks to capture both direct expenditure and the associated expenditure that occurs where an international student visits the UK to consume those goods and services. As the methodology has been developed specifically for this purpose, the estimates are not necessarily directly comparable with goods and services breakdowns contained in ONS' Pink Book ([here](#)) estimates, which measure the balance of payments for the UK.

In this publication

The following tables are included in the SFR:

- UK revenue from education related exports and repatriated income from transnational education activities
- Underlying data

The accompanying technical document provides information on the methodology used in producing this data and the quality and coverage of data sources.

These measures are intended to quantify the value of education related exports and transnational education activity to the UK economy.

Experimental statistics

These estimates are experimental statistics since they are still to be fully developed and rigorously tested to ensure they meet the required standard for national statistics. This is because the data used to compile these estimates come from multiple sources, some with varying quality or limited coverage.

As improvements are best made by publishing the data and opening up the discussion with data users, we would welcome feedback on the usefulness of the statistics and on the methodology we have used to produce them. We would also welcome ideas for appropriate data sources which could be used to assess the value of exports in these areas and suggestions on additional areas, outside of those already identified, which might contribute to the overall value of education-related exports.

Feedback

We are changing how our releases look and welcome feedback on any aspect of this document at luke.came@education.gov.uk

1. UK revenue from education related exports and transnational education (TNE) activity (Table 1 & 2)

Figure 1 shows the increase in education related exports and TNE activity to £19.9 billion (current prices) in 2016. The value of education related exports and TNE activity has grown steadily since 2010. The overall value has increased by 26% or £4.1 billion in current prices since 2010. Education related exports account for £3.3 billion of the £4.1 billion increase and TNE accounts for £0.8 billion of the increase.

Since 2010, total education related exports have grown by 22% in current prices. TNE activity has grown at a significantly faster rate of 73% over the same period. However, this growth has occurred from a lower base.

UK revenue from education related exports and Transnational education (TNE) activities (£billions and current prices)

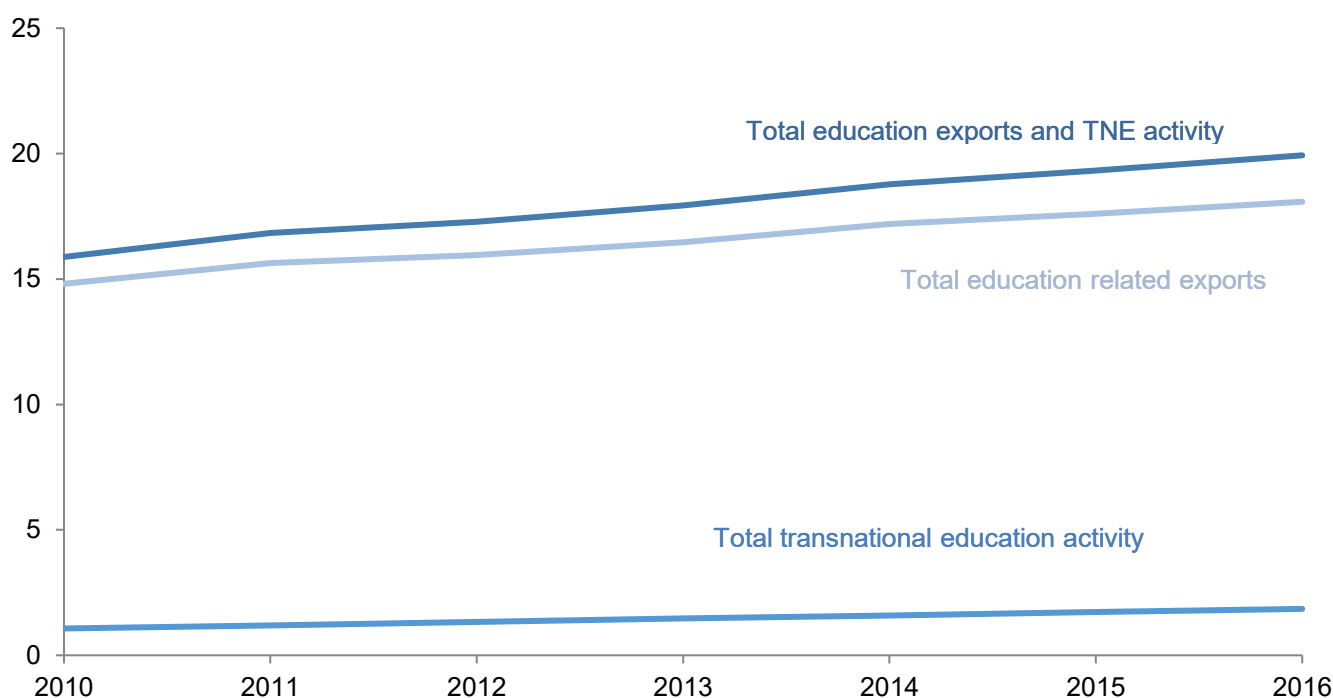

Table 1 shows the annual rate of change in estimates of education related exports since 2010. Between 2015 and 2016 total education exports and TNE activity grew by 3.1%, 0.1 percentage points higher than the rate of growth seen between 2014 and 2015. This reflects the higher growth rate in total education related exports which grew at 2.7% between 2015 and 2016, compared to 2.4% in the previous year.

Table 1: Annual percentage change in education related exports and TNE activity

2. Share of education related exports and TNE by value of revenue stream (Tables 3 & 4)

Figure 2: Share by revenue stream of education related exports and repatriated income from transnational education activities, 2016 (£billions in current prices)

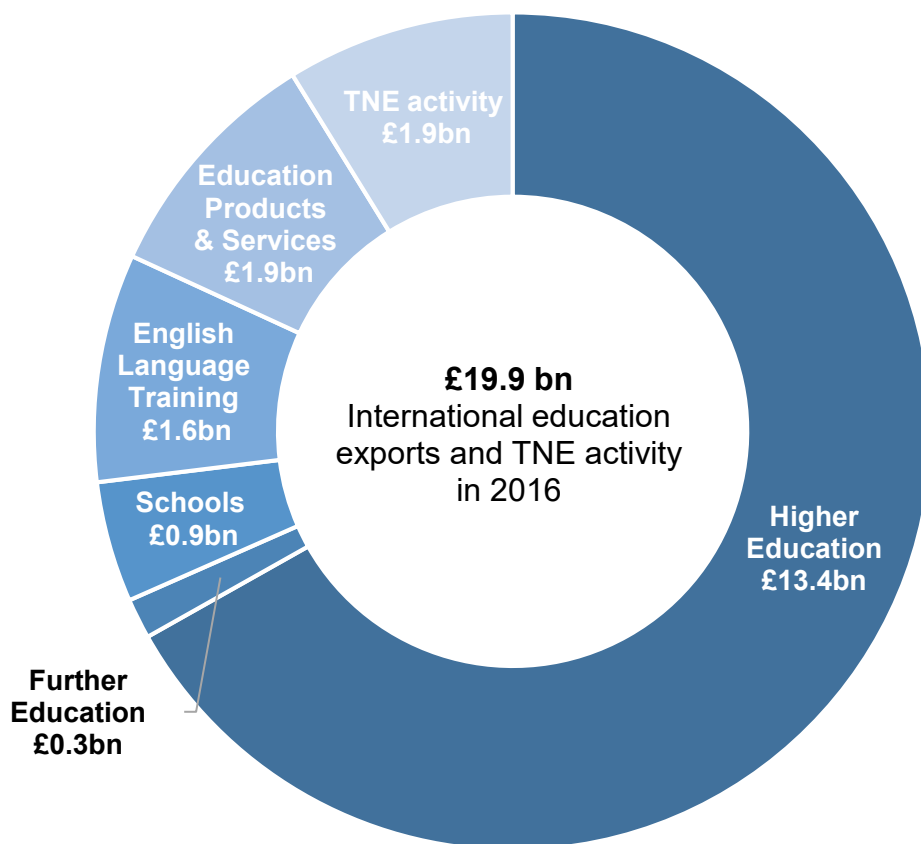

Figure 2 shows the composition of revenue streams in total education related exports and TNE activity in 2016. Higher education was the main contributor with £13.4 billion of export revenue. In comparison, Further Education, which consists of non-EU students only, accounted for £0.3 billion (see methodology for further information on how this is calculated). The income generated from Education Products and Services and TNE activity is broadly similar. English Language Training and Independent Schools generated £1.6 billion and £0.9 billion, respectively.

Table 3 sets out the components of each revenue stream between 2010 and 2016. It shows that, in 2016, EU and non-EU higher education students generated an estimated £11.9 billion² in exports through living expenditure and tuition fees, which accounts for around 60% of the total value of education exports and TNE activity.

² EU and non-EU students generated £9.1 billion and £2.8 billion respectively, minus the cost of scholarships awarded and cost to Government of tuition fee loans.

Figures in brackets are subtracted

Over the period 2010 to 2016 the share of Higher Education to the total value of education related exports and TNE activity has increased by 7 percentage points from 60% to 67%. TNE activity has increased by 2 percentage points over the same period from 7% to 9% (Table 4).

The share of English Language Training and Further Education (non-EU students) have both fallen by 6 and 4 percentage points respectively; the ELT share dropping from 14% to 8% and the Further Education share dropping from 6% to 2%.

3. Accompanying tables

The following tables are available in Excel format alongside this publication:

National tables

Table 1

Annual percentage change in education related exports and TNE activity

Table 2

Percentage change between 2010 and 2016 in revenue streams of education related exports and transnational education activity

Table 3

UK revenue from education related exports and transnational education activity, 2010 – 2016.

Table 4

Share of total education related exports and transnational education activity by revenue stream from 2010 to 2016.

When reviewing the tables, please note that:

Tables 2 and 4 on the percentage change in revenue streams

- The percentage change in table 4 shows the market share of each component of education related exports and transnational education activity, the percentages for each year sum to 100%. In contrast table 2 shows the percentage change in 2016 compared to 2010, showing how the different components have grown or declined in this period.

4. Further information

- A detailed technical note is published alongside this publication
- Previously published figures for 2010 to 2014 are available [here](#)
- Figures for 2015 were first published [here](#).

5. Technical information

A quality and methodology information document accompanies this SFR. This provides further information on the data sources, their coverage and quality and explains the methodology used in producing the data, including how it is validated and processed.
