county  
Date of publication: 6<sup>th</sup> February 2019

## Headline results

**Construction material prices rose on a yearly basis.** The 'All Work' construction material price index increased by 3.7% in December 2018 compared to a year ago, though this was lower than the rate of 4.4% in November 2018.

There was a **7.2% increase** in brick deliveries in December 2018 compared to December 2017, according to the seasonally adjusted figures

## Important Notice

This publication is now published by the Department for Business, Energy and Industrial Strategy (BEIS). All references to the Department for Business, Innovation and Skills (BIS) made in this publication refer to when it was published by BIS. This has made no impact to the content of the publication.

The methodology for the sand and gravel estimates changed in Q1 2017. Please see the background notes for further details.

## Introduction

This commentary accompanies the latest Monthly Statistics of Building Materials and Components bulletin, published on the BEIS building materials [web page](#) on 6<sup>th</sup> February 2019. It provides an overview of recent trends in the data presented in the bulletin.

The bulletin presents the latest detailed information on selected building materials and components. It covers the following building materials statistics (in parentheses, the data collection frequency and the geographical area covered):

- Construction material price indices (monthly, UK)
- Sand and gravel sales (quarterly, GB\*)
- Slate production, deliveries and stocks (quarterly, GB)
- Cement and clinker production, deliveries and stocks (annual, GB)
- Bricks production, deliveries and stocks (monthly, GB\*)
- Concrete building blocks production, deliveries and stocks (monthly, GB\*)
- Concrete roofing tiles production, deliveries and stocks (quarterly, GB)
- Ready-mixed concrete deliveries (quarterly, UK)
- Values of overseas imports and exports trades for selected materials and components for use in construction (quarterly, UK)
- Value of EU and Non-EU Trade for selected materials and components for use in construction (annual, UK)

Note: \* Regional figures available

These statistics support analysis of the construction materials market and business planning. They are regularly reported in the construction press and are used for a variety of purposes, including policy development and evaluation concerning the construction products industry, as well as monitoring market trends. Further detail is available in this document under [Uses of the data](#).

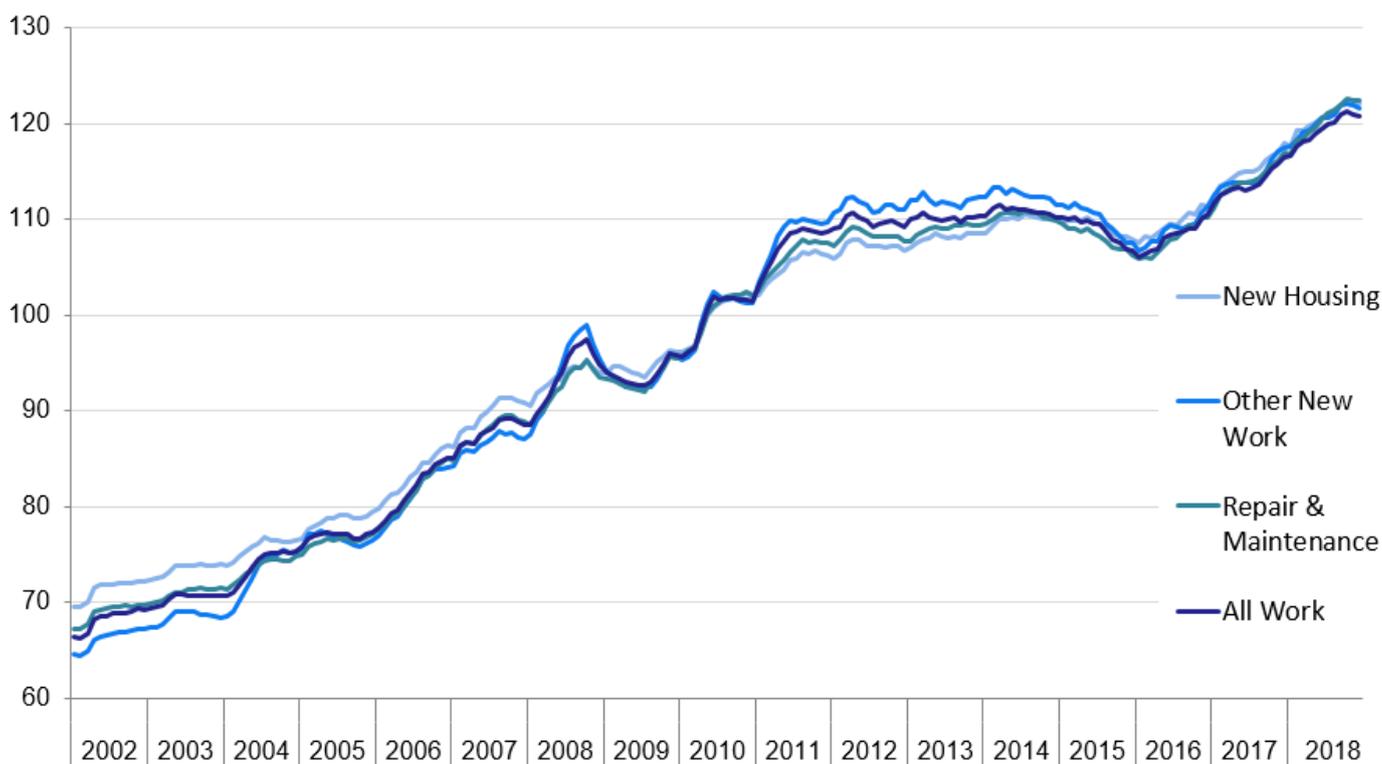

## Seasonal Adjustment Review

Seasonally adjusted series for deliveries of bricks, concrete blocks, ready-mixed concrete and sales of sand & gravel are published in this bulletin. The purpose of correcting the reported series is to allow for seasonal factors such as winter weather (including the reduction in hours of daylight, and frost and rain) and other seasonal events such as Christmas and Easter. Thus, seasonally adjusted figures show the underlying trend more clearly. Further information can be found in paragraph 2 of the Background Notes ([see page 11](#)).

## Summary of Results

### Material Price Indices

**Chart 1: Construction Material Price Indices, UK\***  
Index, 2010 = 100

Source: Table 1, Monthly Statistics of Building Materials and Components

#### Year-on-year change

Change from December 2017 to December 2018	
<b>New Housing</b>	3.5%
<b>Other New Work</b>	3.6%
<b>Repair &amp; Maintenance</b>	4.6%
<b>All Work</b>	3.7%

#### Month-on-month change

Change from November 2018 to December 2018	
<b>New Housing</b>	0.2%
<b>Other New Work</b>	-0.2%
<b>Repair &amp; Maintenance</b>	0.0%
<b>All Work</b>	-0.1%

Looking at the longer-term change, the material price index of **'All Work'** increased by **3.7%** in December 2018 compared to the same month in the previous year.

**Table 1: Construction materials experiencing the greatest price increases and decreases in the 12 months to December 2018, UK**

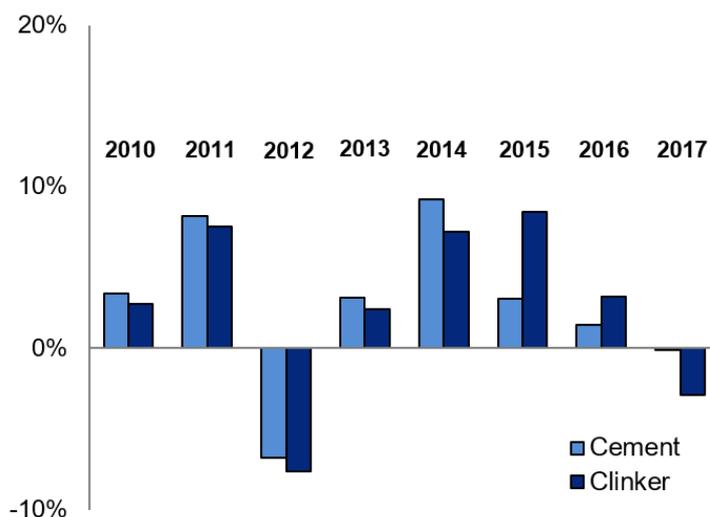

Construction Materials	% change on a year earlier
<b>Greatest price increases</b>	
Imported plywood	15.6
Imported sawn or planed wood	11.8
Paint (aqueous)	7.1
<b>Greatest price decreases</b>	
Concrete Reinforcing Bars	-0.2
Ceramic tiles	-0.1
Sand & gravel (including levy)	0.0

The aggregated construction material price index hides larger price movements for some specific products and materials. The three largest increases and decreases are presented here.

Source: Table 2, Monthly Statistics of Building Materials and Components

## Cement & Clinker

**Chart 2: Production of Cement and Clinker, GB**  
Percentage change over previous year (%)

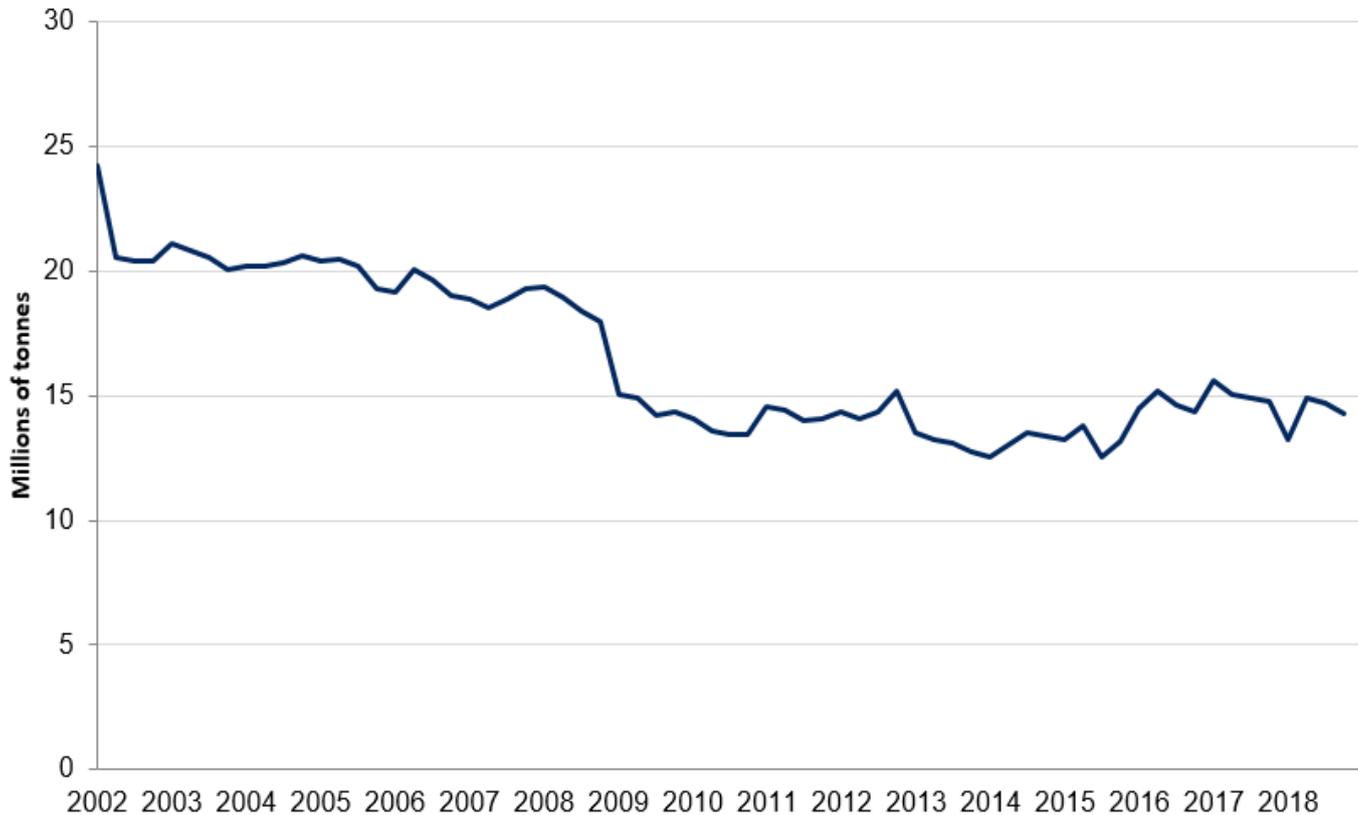

Cement production fell by 0.1% to 9.4 million tonnes in 2017, compared to the previous year. This fall in cement production follows growth of 1.5% to 9.4 million tonnes in 2016. Pre-recession production peaked in 2007 at 11.9 million tonnes.

Production of Clinker fell by 2.9% to 7.8 million tonnes in 2017, compared to the previous year. This fall in clinker production follows growth of 3.2% to 8.1 million tonnes in 2016. Pre-recession production, in 2007, stood at 10.2 million tonnes.

Source: Table 8, Monthly Statistics of Building Materials and Components

## Sand & Gravel

**Chart 3: Seasonally Adjusted Sales of Sand & Gravel, GB**  
Weight of sand & gravel

Source: Table 4, Monthly Statistics of Building Materials and Components

The methodology for the sand and gravel estimates has changed. Please see the background notes for further details.

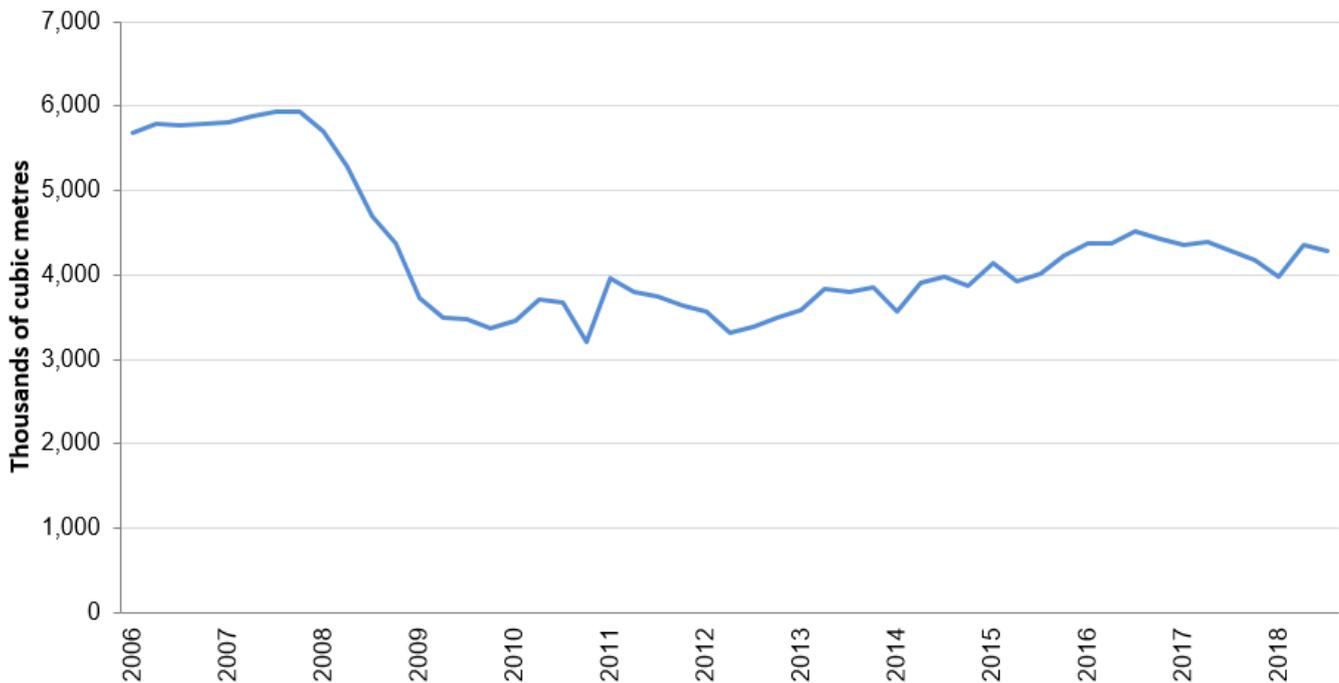

- Sales of sand & gravel **decreased** by **2.7%** in Quarter 4 2018 compared to Quarter 3 2018, according to the seasonally adjusted data.
- This followed a decrease of 1.4% in Quarter 3 2018.
- Comparing Quarter 4 2018 to the same quarter in the previous year, sales have **decreased** by 3.2%.

Seasonally adjusted sales of sand & gravel have consistently remained below levels typically seen before the recession.

*Note: Seasonally adjusted Sand and Gravel totals in Table 4 were incorrect for the November 2018 (No. 525) and December 2018 (No. 526) editions of the report. The totals have been corrected in these earlier editions to reflect the correct seasonally adjusted totals.*

## Concrete

**Chart 4: Seasonally Adjusted Sales of Ready-Mixed Concrete, GB**  
Volume of concrete

Source: Table 13, Monthly Statistics of Building Materials and Components.

The data source for raw RMC has changed from 2016 Q1; these figures form the basis of the seasonally adjusted data.

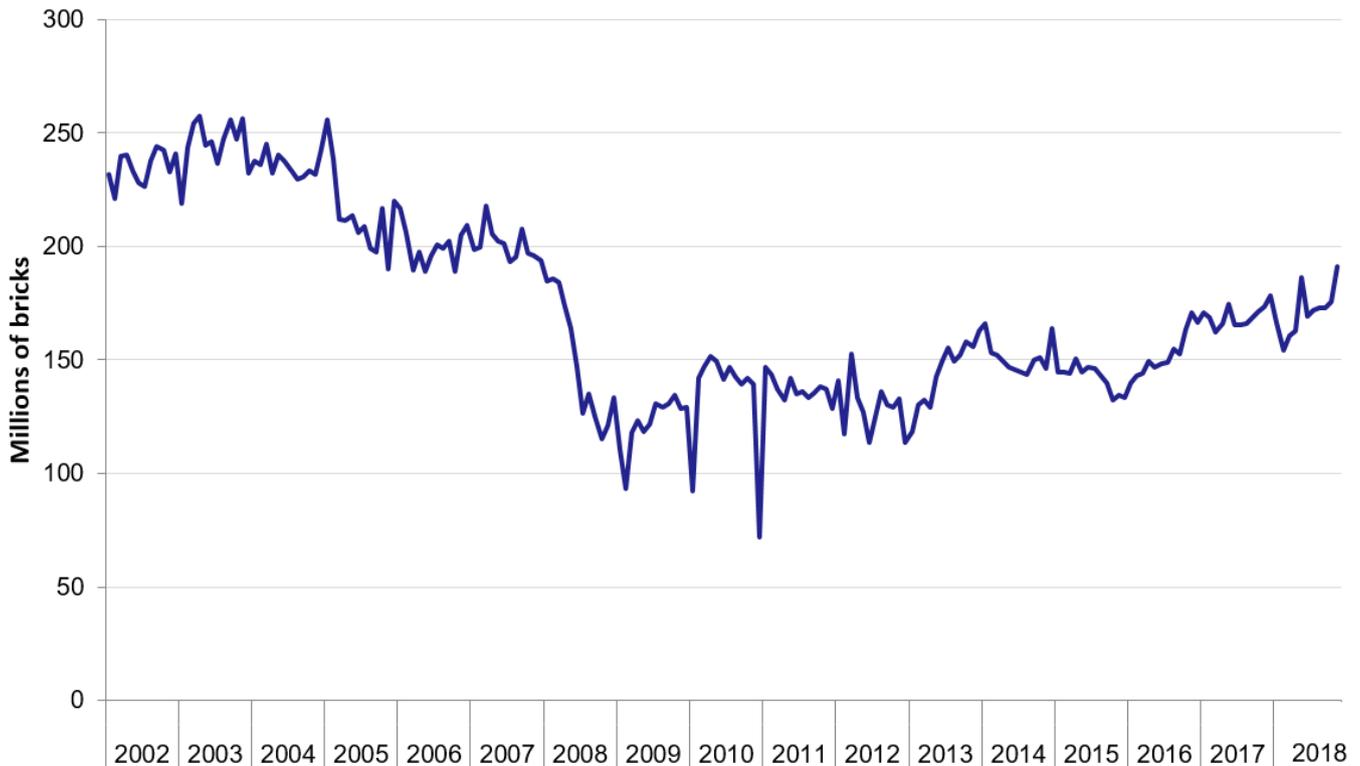

- Data for ready-mixed in Quarter 4 of 2018 was not available at the time of publication
- Ready-mixed concrete sales **decreased** by **1.5%** in Quarter 3 2018 compared to Quarter 2 2018, according to the seasonally adjusted data.
- This followed a **9.3% increase** in Quarter 2 2018.
- Sales in Quarter 3 2018 **increased** by **0.1%** compared to the same quarter in the previous year, following an **1.0% decrease** in Quarter 2 2018, on the same basis.

The seasonally adjusted data show that the lowest quarterly sales in the post-recession period occurred in Quarter 4 2010, which included extreme winter conditions.

Sales have steadily recovered since Quarter 2 2012, although they have failed to reach pre-recession levels.

## Bricks

**Chart 5: Seasonally Adjusted Deliveries of Bricks, GB**  
Number of bricks

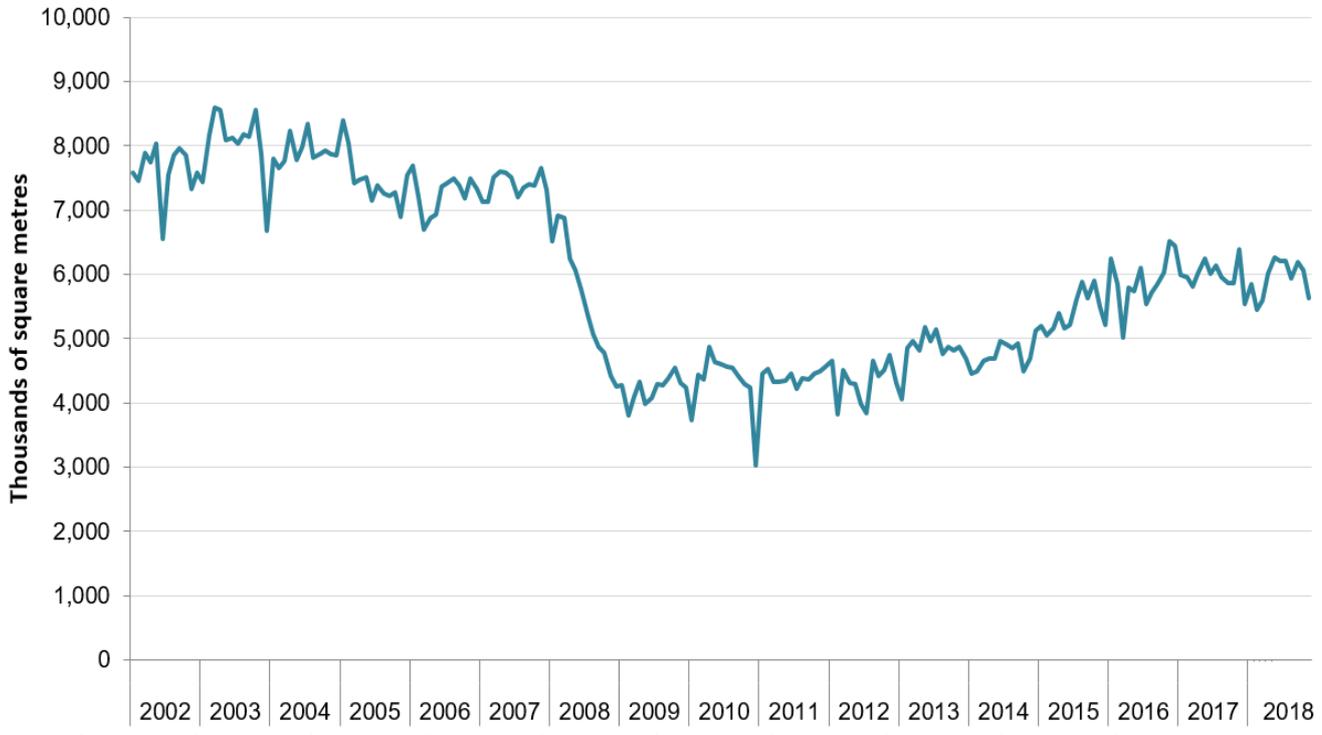

Source: Table 9, Monthly Statistics of Building Materials and Components

- There was a **7.2% increase** in brick deliveries in December 2018 compared to December 2017, according to the seasonally adjusted figures. This may in part be due to comparatively mild weather in December.
- This followed a 1.1% increase in November 2018, on the same basis.
- The month-on-month change shows a **8.9% increase** in December 2018. Again, this may be attributable to mild weather.
- This followed a 1.6% increase in November 2018, on the same basis.

Brick deliveries declined during the recession and reached their lowest value during the extreme cold weather in December 2010. Deliveries were at their lowest point in October 2015 since April 2013.

## Blocks

**Chart 6: Seasonally Adjusted Deliveries of Concrete Blocks, GB**  
Area of concrete blocks

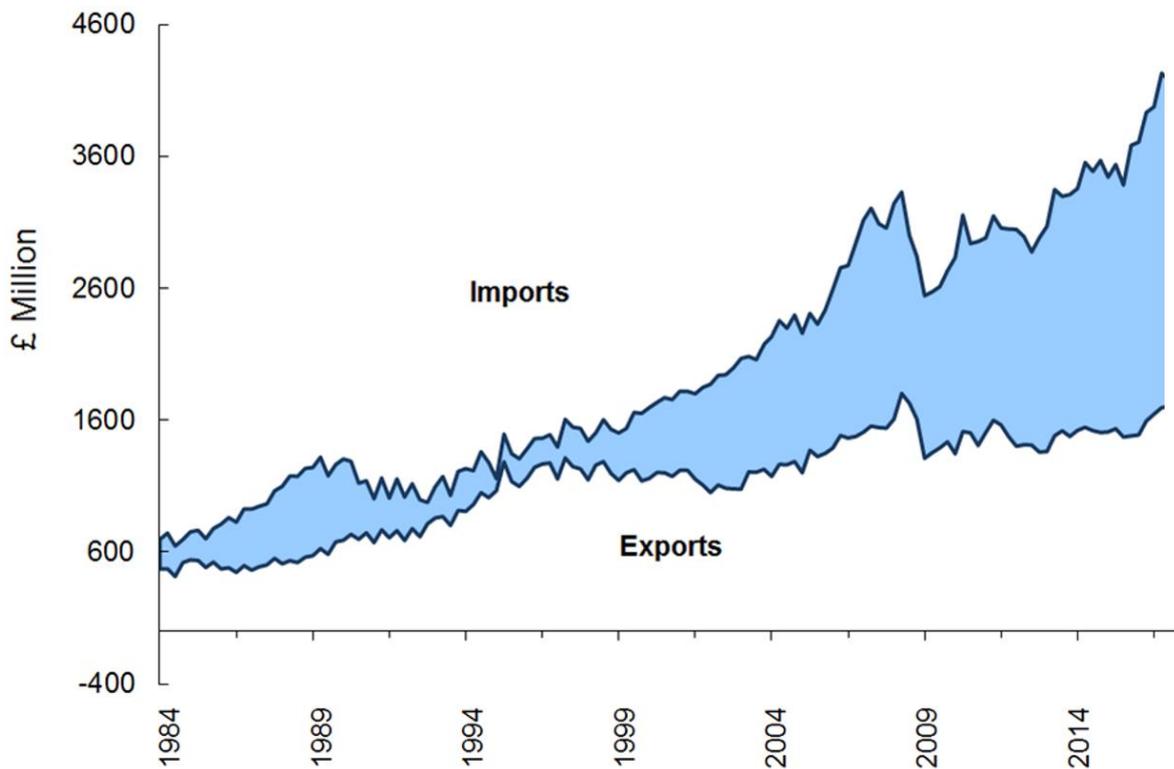

Source: Table 11, Monthly Statistics of Building Materials and Components

- There was an **1.6% increase** in concrete block deliveries in December 2018 compared to December 2017, according to the seasonally adjusted figures.
- This followed a 5.1% decrease in November 2018, on the same basis.
- The month-on-month change shows a **7.1% decrease** in December 2018.
- This followed a 1.9% decrease in November 2018, on the same basis.

Concrete block deliveries declined during the recession and reached their lowest value during the extreme cold weather in December 2010. Since then the trend has varied from month to month, though the general trend year has been one of growth in concrete block deliveries.

## Imports and Exports of Construction Materials

**Chart 7: Exports and Imports of Construction Materials, UK.**  
Value in pounds sterling

Source: Table 14, Monthly Statistics of Building Materials and Components

**Imports** of construction materials **increased** by £56 million in the third quarter of 2018 (to £4,512 million) compared to the previous quarter, an increase of 1.26%.

**Exports** of construction materials **increased** in the third quarter of 2018 by £52 million (to £1,963 million), a 2.7% increase.

As a result, the **trade deficit widened** by £4.52 million to £2,550 million in Quarter 3 2018, a decrease of 0.2%.

Over the period from Quarter 1 1984 to Quarter 3 2018, construction materials imports have increased, on average (per quarter), by 4.0%. Over the same period, exports increased by an average of 2.3% per quarter.

The trade deficit was historically at its smallest throughout the 1990s, with a mean of £0.3 billion over this period. This trade deficit was 24% of the value of imports. Currently (Quarter 3 2018), the trade deficit is £2,550 million, 57% of the value of imports.

**Table 2: Top-5 Exported and Imported Construction Materials in 2017**

£ million

Top-5 Exported Materials		Top-5 Imported Materials	
Electrical Wires	855	Electrical Wires	1,928
Paints & Varnishes	669	Lamps & Fittings	991
Plugs & Sockets	430	Sawn Wood > 6mm thick	859
Lamps & Fittings	381	Air Conditioning Equipment	663
Air Conditioning Equipment	374	Central Heating Boilers	641

The top five exported materials in 2017 accounted for 38% of total construction material exports.

The top five imported construction materials in 2017 accounted for 30% of total construction material imports.

Source: Table 14, Monthly Statistics of Building Materials and Components

**Table 3: UK Trade of Construction Materials with EU and Non-EU Countries, 2017**

£million (% of total trade in italics)

All Building Materials & Components	EU	Non-EU
Imports	10,276	6,710
	<i>60%</i>	<i>40%</i>
Exports	4,357	2,760
	<i>61%</i>	<i>39%</i>

Compared to pre-recession levels in 2007, the share of total UK construction material exports going to the EU has declined from 70% to 61%.

Source: Table 15 Monthly Statistics of Building Materials and Components

**Table 4: Top 5 UK Export and Import Markets for Construction Materials in 2017**

£ million

Top-5 Export Markets		Top-5 Import Markets	
Republic of Ireland	1,037	China	2,849
Germany	778	Germany	2,477
USA	594	Italy	1,081
France	590	Netherlands	847
Netherlands	565	Spain	845

The top five export markets comprised 50% of total construction materials exports in 2017. The Republic of Ireland remains the largest market, despite having shrunk from a pre-recession peak of 27% of total exports in 2007, to 15% in 2017.

The top 5 import markets comprised 48% of total construction materials imports in 2017. 17% of all imports are from China.

The '[Rotterdam Effect](#)' (also known as the '[Antwerp Effect](#)') may affect trade figures. This is explained in detail by [HM Revenue & Customs](#).

## Economic Background

### Construction Output

The most recent [construction output](#) figures for November 2018 were published by the **Office for National Statistics** on January 11<sup>th</sup> 2019.

#### *Key points:*

- The three-month on three-month series for all work was up 2.1% for November 2018, driven by all new work, which increased by 3.4%, but was offset slightly by a decline in all repair and maintenance, which fell by 0.4%.
- The increase in the all new work three-month on three-month series was driven primarily by private new housing and infrastructure which increased by 4.9% and 6.5% respectively.
- Construction output recorded an all-time level high in November 2018 in the chained volume measure seasonally adjusted series; the month-on-month series grew by 0.6%, resulting in the total value of construction output exceeding £14 billion for the first time since monthly records began in 2010.
- This was driven primarily by strong growth in private new housing, private commercial new work, and public housing repair and maintenance, which increased by 3.1%, 2.3%, and 5.8% respectively.
- The main factors acting to depress growth were a steep decline in public other new work, down 5.8%, as well as a fall in infrastructure, which decreased by 2.5%.

### Bank of England Summary of Business Conditions

The **Bank of England** published its latest update to the [Agents' Summary of Business Conditions](#) on 20<sup>th</sup> December 2018, covering intelligence gathered between mid-October and late November 2018.

#### *Key points:*

- Growth in the value of retail sales weakened. Uncertainty related to Brexit and subdued housing market activity weighed on demand.
- Output growth in the construction sector remained modest. Following a period of strong growth, there was a slight slowdown in housebuilding activity in some parts of the UK. This was partially offset by stronger demand for refurbishment and improvement work in housing, and for private rental developments. Construction of private non-residential property slowed, especially of retail premises and offices. Growth in civil engineering and infrastructure work held broadly steady, but contacts said larger projects remained vulnerable to delays, and contacts were concerned that some projects might be scaled back.
- Investor demand for commercial real estate was concentrated in warehousing and distribution, and demand from foreign investors for developments in UK cities remained solid. Housing market activity weakened, partly due to increased uncertainty about the economic outlook.

### Gross Domestic Product Estimate

The **Office for National Statistics** published the [monthly estimate](#) of gross domestic product for November 2018 on 11th January 2019. Further details of the new GDP publishing model can be found in the bulletin.

#### *Key points:*

- UK GDP grew by 0.3% in the three months to November 2018. The services sector was the largest contributor to growth, at 0.24%, with construction contributing 0.13%
- The month-on-month gross domestic product (GDP) growth rate 0.2% in November, following 0.1% in October and flat growth in September
- Construction growth remained strong at 2.1%.

## Gross Domestic Product Forecast

The latest monthly **Consensus Economics** [forecast survey](#) (which uses an average of private sector forecasts) results were published in January 2019.

### *Key points:*

- The mean GDP growth forecast for Q4 2018 is estimated at 1.4% and the GDP growth forecast for 2018 remains unchanged from last month.
- The mean GDP growth forecast for 2019 is 1.5% growth and remains unchanged from last month, though does not encapsulate intensifying uncertainties around Brexit.

The **Office for Budget Responsibility** published its most recent [Economic and Fiscal Outlook](#) on 29<sup>th</sup> October 2018.

### *Key point:*

- The GDP growth forecast for 2018 was revised from 1.4% in November 2017 to 1.3%.

## Construction Output Forecasts

In January 2019, **Experian** published their [forecasts](#) for the construction sector.

### *Key points:*

- Strong growth between 2014 to 2017 period has come to an end for construction, with growth in 2018 and 2019 unlikely to exceed 1%, though is projected to accelerate somewhat in 2020 and 2021.
- Construction output in the year to October 2018 was 1% higher in real terms than in the corresponding period of 2017, and growth for the year is estimated to have increased by 0.8% compared to 2017.
- Main drivers of growth in 2018 were the private housing (estimated at +8% compared to 2017), infrastructure (estimated at 5%) and private non-residential R&M sectors (estimated at 6%).
- In the infrastructure sector the main impetus has come from the rail sub-sector, which saw output rise by over 50% in the first three quarters of 2018 compared with the same period of 2017.
- Private non-residential R&M output has risen quite robustly since 2011, a trend likely to be continued in 2018. It is assumed that generally rising asset values have contributed to this, as well as efforts to make buildings more energy efficient.
- In contrast, the new non-residential building sectors have generally not had a good 2018 (estimated at -6% compared 2017), the industrial sector excepted. Work on health where output contracted by 33% on an annual basis in the first 9 months of 2018, and education where output contracted by 14% over the same period, has fallen sharply.
- The commercial sector has been impacted by Brexit uncertainties, with office output starting to decline, with 2018 output estimated at -5% compared to 2017, and continuing weakness in the retail subsector.

- However, industrial construction has held up better, with estimated to have risen by 7% compared to 2017, and demand for new distribution and logistics facilities particularly buoyant.

The **Construction Products Association** published their Autumn [forecasts](#) for the construction sector in January 2019.

*Key points:*

- The outlook for the UK's construction industry has been downgraded, with growth prospects diverging by sector and Brexit-related uncertainty persisting and intensifying.
- Construction output is now expected to rise by 0.3%, down from a forecast rise of 2.3% six months ago.
- Brexit uncertainty continues to drive expectations for the sharpest construction decline in the commercial sector, with investors signalling uncertainty is too high to justify significant up-front investment, and output expected to fall 20% in 2019.
- Private housing and infrastructure sectors will remain primary drivers of industry growth in the coming years. The extension of the Government's Help to Buy scheme through to March 2023 continues to encourage housebuilding activity, with output forecast to rise 2% in 2019 and 1% in 2020.
- The infrastructure sector is expected to reach its highest level on record in 2019 driven by large projects, despite concerns about government's ability to deliver major infrastructure projects. Infrastructure growth is forecast to rise by 8.8% in 2019 and 7.7% in 2020.
- Brexit-related uncertainties may drive growth in other sub-sectors. The harbours sector is expected to grow by 12% in 2019 and 10% in 2020. Warehousing may also benefit due to increased demand for storage and stockpiling facilities. Following growth of 20% in 2018, construction activity in this sector is forecast to rise a further 10% in 2019 and 2020.

## Manufacturing

The latest **Index of Production** data for October 2018 were [published](#) on 11<sup>th</sup> January 2019 by the Office for National Statistics.

*Key points for the SIC 23.1-4/7-9 industry (includes the manufacture of bricks, tiles and other construction products):*

- When comparing November 2018 with November 2017, **output increased by 1.1%.**
- When comparing November 2018 with October 2018, **output decreased by 0.8%**

*Key points for the SIC 23.5-6 industry (includes the manufacture of concrete, cement and other products for construction purposes):*

- When comparing November 2018 with November 2017, **output increased by 3.0%.**
- When comparing November 2018 with October 2018, **output increased by 1.9%.**

## Background Notes

### Quality information for the Building Materials bulletin

1. The United Kingdom Statistics Authority has designated these statistics as National Statistics, in accordance with the Statistics and Registration Service Act 2007 and signifying compliance with the Code of Practice for Official Statistics.

Designation can be broadly interpreted to mean that the statistics:

- meet identified user needs;
- are well explained and readily accessible;
- are produced according to sound methods, and
- are managed impartially and objectively in the public interest.

Once statistics have been designated as National Statistics it is a statutory requirement that the Code of Practice shall continue to be observed. The full assessment [report](#), published on 22nd December 2011, can be found on the UK Statistics Authority website.

2. As of 3<sup>rd</sup> August 2016, this publication is published by the Department for Business, Energy and Industrial Strategy (BEIS). All references to the Department for Business, Innovation and Skills (BIS) made in this publication refer to when it was published by BIS. This has made no impact to the content of the publication.
3. In work done for BIS on improving the quality of statistics published in the Monthly Statistics of Building Materials and Components, the Office for National Statistics' Methodology Advisory Service (MAS) recommended that BIS should start seasonally adjusting key data series (see [ONS/MAS review of building materials statistics: final report](#) for more detail). Seasonal adjustment is widely used in official statistics and aids data interpretation by removing effects associated with the time of the year or arrangement of the calendar. Seasonal effects frequently obscure features of interest in data, such as long term trends and the effects of unusual occurrences. By removing seasonal effects, users can more readily identify the features of interest.

Following advice from the MAS, and the results of a consultation (see the [results of the BIS consultation on seasonal adjustment](#) for more detail), BIS agreed to publish seasonally adjusted data for the following series:

Sand and gravel, total sales  
Concrete blocks, all types deliveries  
Bricks, all types deliveries  
Ready-mixed concrete, deliveries

For the initial publication of seasonally adjusted data, data from 1983 onwards will be seasonally adjusted. Subsequently, for each monthly publication, data up to 12 months or 4 quarters previous to the new data point will be revised. Upon the completion of each year's data series, data for the previous 12 years will be revised. BIS will publish both non-seasonally adjusted and seasonally adjusted data in the tables of this publication. From the June 2015

Edition this publication will only use seasonally adjusted data in the commentary for these series.

4. Quality issues related to the *Building Materials and Components* outputs are discussed in the review of the Building Material statistics that was carried out in 2010 by BIS's construction team. The review aimed to: ascertain user needs; examine whether existing data collection methodologies are fit for purpose; estimate compliance costs; assess compliance with the Code of Practice; and identify options for change.

The full [report](#) can be found on the BIS *Building Materials and Components* webpage.

Detailed information on data suppliers, coverage and data collection methodology can be found in sections 2.1-2.10. Quality issues (coverage and accuracy of sample panels, response rates, survey results processing, disclosure etc.) and potential measures that could be employed to improve the quality of the statistics are discussed in section 2.11 of the review. Users' views on the quality of the *Building Materials and Components* statistics are given in section 3.3.4. These are derived from a user survey carried out in early 2010, as part of the review (see section 3 for details).

5. Following the review, BIS acted on the recommendations including commissioning the Office for National Statistics Methodology Advisory Service (ONS/MAS) to address some of the recommendations from the 2010 review. In July 2011, MAS published their [interim report](#). In July 2012, MAS published their [final report](#).
6. HM Revenue and Customs use administrative sources to produce Overseas Trade Statistics. A [Statement of Administrative Sources](#) used to compile construction material trade statistics is available on the BIS *Building Materials and Components* webpage:

Separately, HM Revenue and Customs also have a [Statement of Administrative Sources](#) which covers Overseas Trade Statistics.

7. [The pre-announcement of any major changes to samples or methodology](#) also details some methodological changes to the collection of data.
8. The following table gives a summary of response rates related to some of the latest survey results. Where the response rate is less than 100%, estimates are made for missing values.

<b>For latest data used</b>	<b>Bulletin table number</b>	<b>Response rate</b>
Quarterly Sand and Gravel	4, 5 & 6	82%
Quarterly Sand and Gravel – Land Won	4, 5 & 6	74%
Quarterly Sand and Gravel – Marine Dredged	4, 5 & 6	93%
Quarterly Slate	7	100%
Quarterly Concrete Roofing Tiles	13	100%
Monthly Bricks Provisional data	9	100%
Monthly Bricks Final data	9 & 10	100%
Monthly Concrete Blocks	11	96%

9. Change to the methodology for the land-won sand and gravel surveys. Previously we have used information from the Annual Minerals Raised Inquiry (AMRI) run by the Department for

Communities and Local Government (now the Ministry for Housing, Communities and Local Government) in order to select the sample of sites which received the land-won sand and gravel survey and to weight the results to reflect the population. MHCLG no longer run AMRI, and so we have had to make changes to the sand and gravel surveys, which took effect from Q1 2017. The changes are:

- We have changed the survey from a sample to a census, so that we now send forms to all sites identified as producing sand and/or gravel. This has increased our panel from about 200 sites to around 500, and means that we will no longer need to weight the returns. We will still need to impute for any non-response.
- We refreshed our panel of sites using information from the British Geological Survey, ensuring that it was up-to-date.
- We made the survey statutory, bringing it into line with the marine-dredged sand and gravel survey which was already statutory. This means that respondents are required to complete the survey under the Statistics of Trade Act 1947.

## Uses of the data

10. The *Building Materials and Components* statistics are used for a variety of purposes, including policy development and evaluation concerning the construction products industry, as well as monitoring market trends. In a wider context, the figures are regularly reported in the construction press to facilitate market analysis and business planning for its wide range of readers. The statistics are also increasingly used by financial institutions for assessing market information and industry trends. For more information on the uses of the Building Materials statistics, their usefulness to users and users' views on the quality of these statistics, see Section 3 of the *Building Materials and Components* [review](#).

## Related Statistics

11. [Construction Statistics: Sources and Outputs](#) lists the known sources of information available on the construction industry and their outputs. These include information on employees, employment, enterprises, output and new orders in the construction industry as well as the contribution of the industry to the economy. Related information, for example housing, is also included.
12. The [Construction Statistics Annual](#) brings together a wide range of statistics currently available on the construction industry from a variety of sources and provides a broad perspective on statistical trends in the construction industry, with some international comparisons.
13. In its monthly **Index of Production (IoP)** [publication](#), the Office for National Statistics publishes Gross Value Added (seasonally adjusted, UK) data for the following two industries:
  - SIC 23.1-4/7-9 industry, which includes the manufacture of bricks, tiles and other construction products.
  - SIC 23.5-6 industry, which includes the manufacture of concrete, cement and other products for construction purposes.

These data are not directly comparable with the data in this bulletin, due to differences in coverage and methodology. They are nevertheless useful in illustrating the latest output trends of related construction materials as measured by the Office for National Statistics.

## Revisions

14. Our [revisions policy](#) can be found on the BEIS Building Materials webpage.
15. [The pre-announcement of any major changes to samples or methodology](#) and [Summary of Revisions](#) give further information on revisions and other changes to data and can also be found on the BEIS Building Materials webpage.

## Pre-release access

16. No [pre-release access](#) is granted to this publication.

## Further information

The coverage of cement and cementitious statistics changed from UK to GB in 2002 due to data confidentiality issues in Northern Ireland as the number of manufacturers decreased. Where the coverage of figures for other building materials is limited to Great Britain (i.e. sales of sand and gravel, and production, deliveries and stocks of slate, clinker, bricks, concrete building blocks and concrete roofing tiles), no equivalent data are collected for Northern Ireland.

The most recently published bulletin and accompanying data tables can be found on BIS' *Building Materials and Components* [website](#).

Accompanying tables with data relating to 2011 are accessible from [this](#) link.

Accompanying tables for 2005 - 2010 are accessible from [this](#) link.

Requests for older data should be sent to [MaterialStats@beis.gov.uk](mailto:MaterialStats@beis.gov.uk).
