Note: a hashtag denotes counter non-operational due to maintenance work, while an asterisk indicates counts are minimum figures due to one or more counting channels being inoperative. Counts in brackets are totals based on estimated usage of non-operational channels. Please acknowledge the Environment Agency as the data source if quoting any of the above figures. This document will be updated regularly but the information may not be the latest calendar month. If you require further information on migratory salmonid stocks in North East, please contact Environmental Monitoring Team on 08708 506506 or email:
