

## Ensuring test scripts can be marked on screen

Published March 2019

The majority of key stage 2 tests will be marked on screen. To ensure test scripts can be scanned and answers read and marked on screen, pupils should follow the guidelines below.

- Pupils must use a dark pencil or a pen with blue or black ink to provide their answers. They must not use glitter pens or coloured pens, in particular red. These are illegible when scanned for on-screen marking.
- If a pupil needs to change an answer they should cross out their incorrect answer, rather than rub it out, and write their new answer next to it. This is because partially rubbed out answers can sometimes reappear during the scanning process, which could result in a pupil's answer being marked as incorrect.
- For mathematics questions where drawing is required, pupils should fully rub out their original answer before recording their new answer.
- Pupils should keep their test scripts in good condition and not fold or crumple their answer booklets. Folded or crumpled scripts do not scan clearly.
- Answer booklets will be cut and scanned for on-screen marking. The example on the following page shows which sections will be cut off. When preparing pupils for the tests, encourage them to write their answers in the space provided. Responses in the margins or the grey area will not be marked. Pupils can use any other white space to do their working out in the mathematics tests.
- The answer booklets include barcodes so each page of a test script is associated with the right pupil. Pupils must not colour in or write on the barcodes positioned at the base of each page.
