Data valid to 30 April 2019

The number of animals tested by active surveillance varies each year according to EU requirements. This in turn affects the number of positive cases detected.

* This summary shows data from 1998 onwards, when the Scrapie Notifications database was set up. Records of goats prior to this date cannot be ascertained and so have not been included in this summary.

*Atypical scrapie has not been detected in Goats

*Index case = The initial passive case on a non-monitored holding
