BSE Cases born after the reinforced feed ban (BARB cases)

April 2019

Contents

BARB cases in Great Britain	2
BARB cases in Northern Ireland.....	7

1st August 1996 is regarded as the date when extra control measures on animal feed containing mammalian meat and bone meal are considered to have been fully implemented. BSE cases born after July 1996 are referred to as Born After the Reinforced Ban (BARB) cases.

BARB cases in Great Britain

GB case	Date Of Birth	Date BSE Confirmed	County Of Birth	Method Of Detection
1	25/08/1996	27/06/2000	Dorset	Passive Surveillance

Data as at 30 April 2019

Notes

The above table does not include 3 confirmed cases of BSE in 2 animals which died in December 2005 and 1 animal which died in August 2008 on a Somerset farm. These cases were identified under the compulsory BSE surveillance programme, an aspect of which requires the UK to test all fallen stock cattle aged 24 months or over and from 2009, cattle aged 48 months and over. The dates of birth of these animals are unknown although they are likely to have been born after July 1996. Disease was confirmed on 24 January 2006 and 30 September 2008.

Data as at 30 April 2019

Notes

The above table does not include 1 confirmed case of BSE in an animal in which the disease was confirmed on 18 January 2007. This case was identified under the compulsory BSE surveillance programme, an aspect of which required the UK to test all cattle aged 30 months and over before they enter the food chain. The date of birth of this animal is under investigation but it is likely to have been born after July 1996.
