England Coast Path Stretch: Grain to Woolwich

Overview to Natural England’s compendium of statutory reports to the Secretary of State for this stretch of coast
Report number and title

GWO 1 Grain to Allhallows (Maps GWO 1a to GWO 1e)
GWO 2 Allhallows to Denton (Maps GWO 2a to GWO 2m)
GWO 3 Denton to Botany Marshes (Maps GWO 3a to GWO 3d)
GWO 4 Botany Marshes to Dartford Marshes (Maps GWO 4a to GWO 4e)
GWO 5 Dartford Marshes to Erith Saltings (Maps GWO 5a to GWO 5e)
GWO 6 Erith Saltings to Woolwich Foot Tunnel (Maps GWO 6a to GWO 6h)
Report number and title

GWO 1: Grain to Allhallows (Maps GWO 1a to GWO 1e)
GWO 2: Allhallows to Denton (Maps GWO 2a to GWO 2m)
GWO 3: Denton to Botany Marshes (Maps GWO 3a to GWO 3d)
GWO 4: Botany Marshes to Dartford Marshes (Maps GWO 4a to GWO 4e)
GWO 5: Dartford Marshes to Erith Saltings (Maps GWO 5a to GWO 5e)
GWO 6: Erith Saltings to Woolwich Foot Tunnel (Maps GWO 6a to GWO 6h)

Using Key Map

Map A (opposite) shows the whole of the Grain to Woolwich stretch divided into shorter numbered lengths of coast.

Each number on Map A corresponds to the report which relates to that length of coast.

To find our proposals for a particular place, find the place on Map A and note the number of the report which includes it.

If you are interested in an area which crosses the boundary between two reports, please read the relevant parts of both reports.

Printing

If printing, please note that the maps which accompany reports GWO 1 to GWO 6 should ideally be printed on A3 paper. If you don’t have the facility to print at A3 size, we suggest you print the text of the report you are interested in on A4 paper and view the associated map on your computer screen, using the zoom tool to view it at a suitable size.

This Overview document sets out the context for Natural England’s proposals to improve public access to and along the stretch of coast between Grain and Woolwich. It explains key common principles and background underlying the detailed proposals that we make in our compendium of linked but legally separate statutory reports, each covering a single length of coast within the stretch. Each of these reports should be read in conjunction with this Overview.

Taken together, these reports explain how we propose to implement the England Coast Path (“the trail”) on this stretch of coast, and detail the likely consequences in terms of the wider ‘Coastal Margin’ that will be created if our proposals are approved by the Secretary of State. Our reports also set out:

- any proposals we think are necessary for restricting or excluding coastal access rights to address particular issues, in line with the powers in the legislation; and
- any proposed powers for the trail to be capable of being relocated on particular sections (through "roll-back"), if this proves necessary in the future because of coastal change.

So although this Overview has multiple reports associated with it, each report relating to a particular part of the stretch makes free-standing proposals, and seeks approval for them by the Secretary of State in their own right under section 52 of the National Parks and Access to the Countryside Act 1949.

We have carefully considered any potential environmental impacts of improving public access to this stretch of coast, and made any necessary adjustments to our proposals prior to publication in order to address these. Considerations in relation to environmental matters are explained in Section 6 of this Overview and relevant reports for each length of coast. Links are provided to relevant separately published documentation where appropriate.

The reports are published on our web pages as a series of separate documents, alongside this Overview and more general information about how the Coastal Access programme works.

Each report is accompanied by detailed Proposals Maps for the relevant length of coast. The maps are numbered according to the part of the report to which they relate. For example, Maps GWO 1a to GWO 1e illustrate the proposals in report GWO 1, which deals with the length from Grain Esplanade to Allhallows Leisure Park.
Introduction

1. Improving coastal access

Natural England has a statutory duty under the Marine and Coastal Access Act 2009 to improve access to the English coast. The duty is in two parts: one relating to securing a long-distance walking route (“the trail”) around the whole coast: we call this the England Coast Path; the other relating to a margin of coastal land associated with the route which, in appropriate places, people will also be able to enjoy on foot. Associated with this duty is a discretion given to Natural England to extend the trail up any river estuary on either or both sides beyond the seaward limit of the estuarial waters¹, as far as the first bridge or tunnel with pedestrian access, or as far as any point between the two.

To secure these objectives, we must submit statutory reports to the Secretary of State for Environment, Food and Rural Affairs recommending where the route should be and identifying the associated coastal margin. The reports must follow the approach set out in our methodology (the Coastal Access Scheme), which – as the legislation requires – has been approved by the Secretary of State for this purpose.

This Overview and the related compendium of reports relate to the coast of Medway, Kent, the London Borough of Bexley and the Royal Borough of Greenwich between Grain and Woolwich. Taken together, our report proposals would make the following key improvements to the existing arrangements for access to this part of the coast:

- New sections of coastal path would be created in strategic places to link existing coastal paths into a continuous route along this stretch of coast;
- For the first time, there would be secure statutory rights of public access to most areas of beach, cliff and other coastal land on this stretch of coast;
- The coastal path would be able to ‘roll back’ as the cliffs erode or slip, or when other forms of coastal change occur, solving long-standing difficulties with maintaining a continuous route on this stretch of coast.

This is a significant opportunity to improve public access to this stretch of coast in these ways, with benefits for residents, businesses and visitors. More people will have easier and more extensive access to the coastal environment for open-air recreation, which is widely acknowledged to have significant benefits for human health and well-being.

Once approved and established, this part of the England Coast Path will be managed as part of the family of National Trails.

¹ section 301 of the Marine and Coastal Access Act 2009
2. The determination process

Each of the reports for this stretch is submitted in accordance with our statutory duty under section 296 of the Marine and Coastal Access Act 2009 (‘the 2009 Act’) to improve access to the English coast.

Publication of the reports has been advertised locally and online in accordance with the requirements of the coastal access legislation.

Following publication:

- Any person may make representations to Natural England about any of the reports; and
- Any owner or occupier of affected land may make an objection to Natural England.

In order to be treated as valid, all objections and representations must be received by Natural England no later than the end of the advertised eight week period following publication. The specific closing date appears in the statutory notice for Grain to Woolwich, which can be viewed here [https://www.gov.uk/government/publications/england-coast-path-from-grain-to-woolwich-comment-on-proposals](https://www.gov.uk/government/publications/england-coast-path-from-grain-to-woolwich-comment-on-proposals) together with more information about how to make representations or objections.

The Planning Inspectorate will consider any objections and any related representations before passing recommendations to the Secretary of State, who in turn will consider both representations and objections and then make a decision as to whether to approve our proposals. Chapter 3 of our Coastal Access Scheme explains these processes in more detail (see Annex A: Bibliography).

The Secretary of State may confirm the proposals in each report in full, confirm some with modifications, or reject some or all of them. If the conclusion is that some modification to our proposed approach is required, further consideration may need to be given as to whether any further environmental assessment is necessary. We may need to prepare an amended report for consideration by the Secretary of State, relating to the part(s) of the coast affected by any rejected proposals. The same procedures for representation and objection would apply to the amended report.

Once proposals for the stretch have been confirmed, there will be a preparation period before the new access rights come into force. This period is to enable any necessary physical establishment of the trail to be carried out and to put in place any necessary local management arrangements (including any approved local access restrictions or exclusions).

Once the preparation period is complete, the rights will be brought into force by order on a date decided by the Secretary of State. Normally one single commencement date is used for the whole stretch. We will publicise the commencement of the rights to ensure they are known about and understood locally.

Parts 2 to 4 of each report explain more about the further steps that will be taken to establish the route, provisions for its future maintenance and the procedures which we will follow to make any subsequent changes that prove necessary once proposals for this part of the coast have been approved.
3. Understanding the proposals and accompanying maps

Before looking at the proposals and accompanying maps, it will help you if you read the following notes and then look carefully at the key to the maps.

Our Proposals:

The proposals are divided into 6 reports, each relating to a particular length of coast on this stretch. Each report is accompanied by detailed maps of the relevant length of coast. The maps are numbered according to the report to which they relate. For example, Maps GWO 1a to GWO 1e illustrate the proposals described in report GWO 1.

Each report comprises four parts:

- **Part 1: Introduction** – This sets the context for our proposals for that length of coast.
- **Part 2: Proposals Narrative** - This summarises our alignment proposals in general, including any proposed use of our discretions to align the route along an estuary, or recommended changes to the default landward coastal margin. It also summarises the main access management measures that will need to be introduced and the overall accessibility (ease of use for all) of this length of coast, for all users. Additionally, it may identify any future changes of which we are aware that are likely to impact on this part of the coast, and explain how our proposals deal with this change. In each report the Part 2 Proposals Narrative, in conjunction with the Part 3 Proposals Tables and the Part 4 Proposals Maps, sets out our formal proposals to the Secretary of State in relation to the length of coast in question, for which we are seeking approval under section 52 of the National Parks and Access to the Countryside Act 1949.
- **Part 3: Proposals Tables** – These line-by-line listings set out in more detail our formal proposals to the Secretary of State for the length of coast in question, and should be read in conjunction with the Proposals Narrative and the relevant Proposals Maps.
- **Part 4: Proposals Maps** – These show in map form the proposals set out in the Proposals Narrative and Proposals Tables.

Notes on how our Part 3 Proposals Tables work

These notes explain how the various tables found in each report work:

- In the first table or set of tables, we set out detailed information for each section of coast under the following column headings:
  - Map(s) – This column indicates which of the report maps to view alongside the details in the other columns in the same row.
  - Route section number(s) – This is the unique identification number for the route section concerned. In some cases, two or more adjacent route sections will be amalgamated into a single row in the table, if all other displayed details happen to be identical.
  - Current status of route section(s) – This describes the current status of the route we have proposed and whether it has any existing access rights. Public highways, including public rights of way such as footpaths, are excepted from new coastal access rights because the existing public rights to use such highways will remain in force, and the trail is able to make use of these. Other sections of the proposed trail that do not currently have any access rights or where access is currently permitted by the landowner will become subject to new coastal access rights if our proposals are approved. These new rights, and any national or local restrictions on them, will not affect any existing access arrangements for cyclists, horse-riders or other types of recreational user that may currently exist at the local level - for example by formal agreement with, informal
permission from or traditional toleration by the owner of the land, or through any type of pre-existing legal right that remains in force.

- **Roll-back proposed?** – This indicates whether we propose that, in the event of significant coastal erosion or other geomorphological processes or significant encroachment by the sea, a section of trail which is affected by such factors should be capable of being repositioned in the future in accordance with this formal proposal, without needing further confirmation of the change at that time by the Secretary of State. Roll-back may be used to adjust the trail either in direct response to such changes or in order to link with other parts of the route that need to roll back in response to such changes. The column also indicates whether the ‘roll-back’ requirement is likely to give rise to a normal or more complex change on this section. (In the case of more complex outcomes, further details are provided in the ‘Roll-back implementation’ table). Section 4.10 of the Coastal Access Scheme explains in more detail how roll-back works.

- **Landward margin contains default coastal land type?** – Certain coastal land types are automatically included in the coastal margin where they fall landward of the trail if they touch it at some point. These coastal land types are: foreshore, cliff, bank, barrier, dune, beach, flat or section 15 land. This column identifies where one of the coastal land types is present in the landward coastal margin.

- **Proposal to specify landward boundary of margin** – This sets out any proposals for the default landward boundary of the coastal margin on this section to be altered or clarified - see iv below in the Notes on Maps.

- **Reason for any proposed use of landward boundary discretion** – This provides an explanation for any such proposal to alter or clarify the default margin on this section. This may be either because we are proposing a clear boundary around land that in our view would be margin by default, because it matches the description of ‘coastal land’ explained at paragraph 4.8.8 of the Scheme; or because we propose using our discretion to add land to or remove it from the default margin, as described at paragraphs 4.8.11 of the Scheme.

- **Explanatory notes** – This contains any additional information which may help further explain the proposal for this route section or group of sections.

- Where there is an alternative route or optional alternative route we set out the details of those routes in a separate table. The table includes columns that describe the landward and seaward boundaries of the alternative route strip. Alternative routes/optional alternative routes have a default width of two metres either side of the approved line. We propose specific landward and/or seaward boundaries to the route strip where doing so would add further clarity to the extent of access rights along the route, by working with the grain of what is already there. It should be noted that where the alternative route/optional alternative route follows an existing path corridor, the trail may adopt a variable width as dictated by existing physical features.

- Each report also includes a table that sets out any other options that were considered during our initial planning (in relation to the route and the coastal margin), and explains why they did not form part of our proposals.

- The final table or set of tables for each report provides further details of any situation where local circumstances mean that implementation of roll-back is likely to be more complex. We identify the key issue and our expected resolution.

Annotated examples of these various tables are given below, to illustrate how they are used.

In each report the Part 3 Proposals Tables, in conjunction with the Part 2 Proposals Narrative and the Part 4 Proposals Maps, set out our formal proposals to the Secretary of State in relation to the length of coast in
question, for which we are seeking approval under section 52 of the National Parks and Access to the Countryside Act 1949.

</tbody>
</table>

The relevant Proposal Map(s) for the route section(s).
This column specifies the current access status of the proposed trail section.
These columns show any proposal we are making to align either or both boundaries of the alternative route strip with a physical feature on the ground. No text in either column means that the edge of this section of the alternative route strip would be that of the trail itself.
### Example table 3: Other options considered

<table>
<thead>
<tr>
<th>Map(s)</th>
<th>Section number(s)</th>
<th>Option(s) considered</th>
<th>Reasons for not proposing this option</th>
</tr>
</thead>
</table>
| ABC 3b to ABC-3-S019 | We considered aligning the trail along the route of the existing public footpaths through the boat yard and along the flood bank. | We opted for the proposed route because:  
- it offers a safer and more convenient route with a newly created tarmac surface which is accessible to all.  
- it avoids passing through the working area of the boat yard.  
- the surface of the existing footpath along the flood bank is uneven and often waterlogged.  
Under our proposals, the public footpaths would remain available for people to use but would not form part of the designated trail. |
| ABC 3c to ABC-3-S020 | We considered aligning the trail along the route of the existing public footpath on the cliff edge around the western edge of Cranham Hill. | We opted for the proposed route because:  
- it avoids increased footfall on the fragile limestone grassland flora which is designated as a SAC and SSSI feature.  
- it is comparable, in terms of the safety and convenience of walkers.  
Under our proposals, the public footpath would remain available for people to use but would not form part of the designated trail. |

| The relevant Proposal Map(s) for the route section(s). | The route section number(s), as shown on the Proposals Map(s). | This column describes other options we considered for the route or margin for the identified route section(s). | This column summarises the reason(s) that the other options we considered were not preferred. |

### Example table 4: Roll-back implementation – more complex situations

<table>
<thead>
<tr>
<th>Map(s)</th>
<th>Route section number(s)</th>
<th>Feature(s) or site(s) potentially affected</th>
<th>Our likely approach to roll-back</th>
</tr>
</thead>
</table>
| ABC 4f to ABC-4-S045 | Super Camp Holiday Village | If it is no longer possible to find a viable route seaward of the specified campsite, we will choose a new route after detailed discussions with all relevant interests, either  
(a) to pass through the site, or (b) if this is not practicable, to pass somewhere on the landward side of it.  
In reaching this judgement we will have full regard to the need to seek a fair balance between the interests of potentially affected owners and occupiers and those of the public. |

| The relevant Proposal Map(s) for the route section(s). | The route section number(s), as shown on the accompanying map(s). | This column identifies any areas that could cause us to consider a more complex solution to roll back than would normally be required. | This column summarises our expected approach to roll back in these circumstances. |
Notes on how our Part 4 Proposals Maps work

The notes that follow will help explain the maps provided for each report.

The proposed route of the trail:

i  The thickness of the line used to depict the proposed route on the maps is intended to make it easy to find on the map and to enable us to differentiate, by shading the line differently, between sections of the route that would use existing rights of way, sections that appear to follow other existing walked lines on the ground, and sections that do neither. The thickness of the line on the map is not an indication of the width of the actual trail on the ground – the proposed route simply follows the centre of the line shown. The legislation makes the default width of the trail four metres, but its actual width varies a good deal in practice according to the detail included section by section in our proposals.

ii  In places there are differences between the line of public rights of way recorded on the local Definitive Map that is maintained by the local highway authority, and paths currently used and managed on the ground as public rights of way. Some of these differences may be attributed to adaptation of the path over time to cope with coastal erosion and other processes, whilst others appear to arise from anomalies in the way the rights were originally recorded on the definitive map. The maps in this report show the public rights of way as recorded on the definitive map, and depict them as accurately as possible at the scale used. See part 4.7 of the Scheme for further information.

The coastal margin:

iii  The proposed route of the trail shown on the maps is important in understanding the extent of the coastal margin that would apply to either side of it. Under the legislation:

- the coastal margin is a single, continuous corridor of land which includes the trail itself;

- the margin includes all land seaward of the trail land - although not all of that land would be subject to a new right of access (see point vi below);

- the landward extent of this margin is by default the trail itself, or the inland edge of any land adjoining the trail on its landward side that is foreshore, cliff, dune or beach, or a bank, barrier or flat, or section 15 land (see Annex B: Glossary of terms).

iv  We have the discretion to propose that the landward boundary of the coastal margin should coincide with a recognisable physical feature on the ground – even if the effect of doing so is to add land into the margin, or to remove land from it. We may use this discretion:

- to propose that instead of the default trail width of four metres set by the legislation, particular physical features such as walls, fences or pavement edges should be used where appropriate to define the landward extent of the trail land on that section of the route: such features cannot be depicted on the maps at the scale used, but they are described in the Proposals Tables;

- to clarify or adjust the boundaries of a landward area included by default as margin, in order to create a better ‘fit’ with the circumstances on the ground; or

- to propose in some places that additional areas of land should be added to the coastal margin landward of the trail: land which is affected by such proposals is indicated on the maps with a purple wash and described in parts 2&3 of each report.

Further explanation of these powers can be found at part 4.8 of the Coastal Access Scheme. Our proposals take full account of any views expressed by the owner or occupier of affected land about whether the powers should be used in any of these ways.

v  Land which forms part of the coastal margin would be subject to access rights, other than:
• any excepted land, such as land covered by buildings or their gardens or curtilage: Annex C
summarises in full the categories of excepted land under the legislation; or

• any land where coastal access rights would be excluded under our statutory powers: we
indicate in the report where we already know of circumstances that make this necessary, and
make any proposals accordingly.

vi Spreading room is the term used in the reports to describe any land, other than trail land, which
would form part of the coastal margin and would have public rights of access. It does not therefore
include any excepted land within the margin, or any existing access land on the landward side of the
trail that is omitted from the margin.

Annex B (Glossary of terms) includes a full definition of these terms which you may find helpful in
understanding the report.

Voluntary access dedication

vii Land that was previously dedicated as access land under section 16 of the Countryside and Rights
of Way Act 2000 (CROW) will become subject to the coastal access regime if it forms part of the
coastal margin in any of the ways described above. There is also provision in the legislation for a
land owner or long leaseholder to dedicate other land voluntarily as coastal margin if it lies adjacent
to it or within it. Dedicating land as coastal margin disappplies the excepted land provisions within it,
and may also make provision for the removal or relaxation of specific national restrictions that
would otherwise apply. Parts 4.8.20 to 4.8.23 of the Coastal Access Scheme explain these
provisions in more detail.

In each report the Part 4 Proposals Maps, in conjunctions with the Part 2 Proposals Narrative and the Part
3 Proposals Tables, set out our formal proposals to the Secretary of State in relation to the length of coast
in question, for which we are seeking approval under section 52 of the National Parks and Access to the
Countryside Act 1949.
4. Preparation of the report

To secure the twin objectives under the legislation we have followed the approach set out in our Coastal Access Scheme, as approved by the Secretary of State on 9 July 2013. Chapter 3 of this detailed document sets out the stages of implementation we must follow.

In line with this, before making the proposals in this compendium of reports for the stretch, we conducted extensive preliminary work in two main stages:

- **Stage 1: Prepare** – defining the extent of the coastal stretch with access authorities and identifying the key issues and opportunities, including sensitive features, in conjunction with key organisations; and
- **Stage 2: Develop** – checking the alignment on the ground, sharing our initial thoughts with land owners and offering to ‘walk the course’ with them, planning for the protection of key features, talking further with key interests and reality checking our proposals.

**Stage 1 - Prepare**

This stage involved us working closely with access authorities to develop an understanding of the stretch, agree its exact extent and carry out initial familiarisation visits. We held discussions with representatives of national and local organisations with a strategic interest in this stretch of coast. This included discussions with those we are required by legislation to consult at this stage:

- Medway and Kent local access forums and Gravesham Right of Way Committee;
- County and District Council officers, including ecology, geology, historic environment, planning, transport and countryside ranger staff;
- Town and Parish Council representatives;
- Trail Officer for the Thames Path National Trail Partnership;
- local officers from the Environment Agency, in relation to flood defence and coastal erosion management on this stretch of coast;
- local officers of Historic England, in relation to historic features on this stretch of coast; and
- the Ministry of Defence, in relation to defence interests on this stretch of coast.

We also held discussions with representatives of specific interest groups, including:

- the Ramblers Association;
- Royal Society for Protection of Birds;
- Kent Wildlife Trust;
- Port of London Authority;
- Thames Estuary Partnership;
- Sustrans;
- Kent Ornithological Society;
- the National Farmers Union;
- the Kent Wildfowlers, and
- the Country Land and Business Association.

We publicised on our website the start of work on the stretch and provided an opportunity for all other interested parties to submit to us their views on local issues and opportunities.
We also engaged with internal specialists and relevant organisations locally - including the London and Kent Wildlife Trusts, Royal Society for the Protection of Birds, English Heritage - to consider any potential for impacts on key sensitive features.

In addition to these discussions we took into account a wide variety of information, plans and strategies that we considered relevant to the alignment process. Those that are published on the internet are listed in Annex A: Bibliography.

We then took all reasonable steps to identify owners, occupiers and those with a legal interest in the land which could be affected.

Stage 2 - Develop

This stage involved us contacting, and discussing our initial thoughts with, relevant owners, occupiers and other legal interests.

We asked for their views and invited them to join us when we visited the land to ‘walk the course’ so that we could discuss options for alignment based on mapped summaries of our emerging proposals.

In most cases this was done through separate site meetings with the individuals and businesses concerned. In the interests of efficiency we also held a small number of larger meetings to discuss our proposals with groups of people with a common legal interest, for example where homes or businesses occupy adjacent coastal frontages.

We also took reasonable steps to identify and contact any owners, occupiers or other legal interests who could foreseeably be affected in the future as a result of any roll-back that may prove necessary). See part 7 – Future Changes – below.

We then held further detailed discussions with internal and external specialists to refine our thinking on protecting key sensitive features, carrying out any necessary assessments.

After further discussions with key local and national organisations we refined our proposals and checked them on the ground before moving onto Stage 3 – Propose, which is the substance of these reports.
Key issues along this stretch

5. Discretion to include part or all of an estuary or estuaries

The proposed Grain to Woolwich stretch includes part of the estuary of the River Thames.

a) Introduction

This part of the Overview:

- introduces the core statutory duties and considerations for the national programme as a whole in relation to exercising the discretion to include part, or all, of an estuary within our proposals;
- describes the overall nature of the estuary system(s) found in this part of England, identifying the geographical limits of our discretion to align the trail around the part of the Thames Estuary included within this stretch of coast;
- goes on to explain in more detail how each of the specific estuary considerations set out at section 301 of the 2009 Act affects our view of the options for the Thames Estuary;
- sets out the options for estuary trail alignment which we have identified as a result of this analysis, and;
- describes and explains our chosen proposal.

b) Estuary discretion

Under the 2009 Act there is no requirement for the trail to extend up any estuary further than the seaward limit of estuarial waters that is explained below under “Geographical limits of our discretion”.

But Natural England has a discretion to propose that the trail should extend from the seaward limit as far as the first bridge over which, or tunnel through which, there is a public right of way, or a public right of access, by virtue of which the public are able to cross the river on foot, or as far as any specified point in between. In exercising its discretion, Natural England must have regard to the core national duties and considerations described in Part B and Chapter 10 of the Coastal Access Scheme.

c) Core national duties and considerations relevant to estuaries

Section 296 of the 2009 Act places a legal duty (the Coastal Access Duty) on Natural England and the Secretary of State to secure a walking route around the whole of the open coast of England, together with an associated margin of land for the public to enjoy either in conjunction with their use of the route, or otherwise.

Section 297 goes on to require both, in discharging this duty, to have regard among other things to the desirability of ensuring that so far as reasonably practicable, interruptions to this route are kept to a minimum. This is a key consideration for the whole of the national delivery programme for coastal access. The whole concept of the England Coast Path relies on delivering continuity of the route so far as reasonably practicable for the whole country. Although proposing a route around each estuary is a discretion rather than a legal duty, if the presence of an estuary would interrupt this continuity of access along the open coast then this will constitute a strong prima facie reason for the trail to serve the estuary too, at least to the extent necessary to enable users to continue their onward journey around the coast.

The Scheme notes at paragraph 10.1.4 that because the seaward limit of estuarial waters is an arbitrary point from an access perspective, we are likely to use our discretion at most estuaries to extend the trail upstream to a more convenient point than this seaward limit. Paragraph 10.1.5 then adds “We will always
give careful consideration to our option to extend the trail as far as the first bridge or tunnel with pedestrian public access” – both for reasons of continuity, and with a view to any additional recreational benefits that might result within the estuary itself from doing so.

Chapter 10 of the Scheme explains the **statutory estuary criteria** that section 301(4) of the 2009 Act requires to be taken into account in deciding whether or not to include an estuary in our proposals. These are discussed in more detail in subsection e) below in relation to the Thames Estuary.

The other key considerations, including achieving a fair balance with the interests of owners and occupiers, are discussed in part 6 of this Overview.

d) **Overall nature of estuary systems in this part of England**

The Thames Estuary is predominantly a remote and tranquil landscape of shallow creeks, low lying islands, mudflats and broad tracts of tidal salt marsh and reclaimed grazing marsh that lies between the North Sea and the rising ground inland. It forms the eastern edge of the London Basin and encompasses the coastlines of South Essex, North Kent and London.

Despite its close proximity to London, large swathes of the North Kent coast contains some of the least settled areas of the English coast, with few major settlements and medieval patterns of small villages and hamlets on higher ground and the marsh edges. This provides a stark contrast to the busy urban and industrial areas towards London, where population density is high and development pressures are increasing. Sea defences protect large areas of reclaimed grazing marsh and its associated ancient fleet and ditch systems, and productive arable farmland. Historic military landmarks are characteristic features of the coastal landscape.
e) Thames Estuary

Geographical limits of our discretion

The seaward limit of the transitional waters at the Thames Estuary is as shown on Map A2. The first crossing with pedestrian access is the Woolwich Foot Tunnel.

The statutory estuary criteria

We have considered below each of the section 301 criteria under the headings given in Chapter 10 of the Scheme.

i) Ferry services

There is a frequent ferry service across the Thames between Gravesend and Tilbury. The ferry runs for 6 days per week (except Sundays and Bank Holidays) all year round and is financially supported and championed by the local authorities of either side of the river. It is also well used locally by people commuting to work at Tilbury Docks.

ii) Character of the Estuary

Estuary width

The width of the Thames Estuary is variable. At its widest it is more than 9.8 miles/15.8 kilometres wide and it gradually narrows to 500m wide at the Woolwich Foot Tunnel.

Topography of the shoreline

The most prominent features of the Thames Estuary are the Isle of Sheppey and the Hoo Peninsular on the south shore, with Canvey Island on the north shore. There are several distinctive meander bends in the river upstream of Hoo Peninsular. The large River Medway empties into the Thames on the southern side as well as several significant tributaries, including the River Darent on the south side of the Thames and the River Roding on the north side.

Our proposals relating to these rivers are detailed in the following separate reports Iwade to Grain, Isle of Sheppey, Tilbury to Southend-on-Sea and Southend-on-Sea to Wallasea Island which are due for publication in 2019.

Nature of affected land

The southern and eastern bank of the estuary from Warden (in Sheppey) to Cliffe (in Medway) are predominantly rural with a few larger settlements and docks in Sheppey. This area has a coastal feel and is generally composed of grazing marsh, fleets, dykes, maritime cliffs and saltmarsh. There are extensive flats which are revealed at low tide.

The northern and eastern bank of the estuary from Havengore Island Creek to East Tilbury is more urban and is dominated by heavy industry, docks and the larger town of Southend. Mudflats and saltmarsh can be found on the banks of the Thames and in the creeks around Canvey Island giving this area a coastal feel.

The western reaches of the estuary on both the northern and southern bank (from Cliffe and East Tilbury to Woolwich Foot Tunnel) is predominantly urban with hard defences protecting industry, ports and continuous settlements. Larger creeks including the River Darent and River Roding form part of the estuary and they maintain an estuarine character with mudflats and saltmarsh.

Features of interest

The western reach of the estuary leads on to the capital city of London with its numerous visitor facilities and attractions. Other interesting places along the estuary include historic towns of Rochester (within
Medway Estuary) and Gravesend on the south bank, and the well-known beaches at Southend-on-Sea on the north bank.

The Thames is the biggest estuary in England with the longest and richest history. It has been a key military landscape across many centuries. Forts such as Shornemead, near Gravesend, were installed to protect London in the 1860s. Other defensive features from the First and Second World Wars include remnants of pillboxes and anti-tank obstacles that can be seen along the route.

The historical and continued exploitation of the estuary for industrial purposes has left a wealth of wharves, jetties, docks, and terminals that were built incrementally over the centuries up and down the tidal river. The Thames contains the second biggest port in the UK and busy boat traffic along the Thames continues to this day providing a fascinating view into this dynamic working river. There are many independently run wharves along the Thames which handle many goods arriving by large maritime vessels. The diversity of river traffic is boosted by frequent passenger boats and cruise ships, inland waterway freight and sport and recreational vessels.

From Grain walkers will be able to enjoy the view across to Sheerness at Isle of Sheppey, Southend-on-Sea, and the confluence of the Medway and Thames. Views of London’s skyline can be clearly seen as the trail nears Woolwich, and the route passes under the impressive Queen Elizabeth II Bridge in Dartford, the busiest estuarial crossing in the UK. Popular nature reserves at Cliffe Pools and Elmley on the south bank of the eastern reach of the estuary have considerable interest for bird watchers.

iii) Recreational Benefit

There has been a long aspired for ambition to create a National Trail by the River Thames from its source in the Cotswolds to the sea at Grain. Work is currently underway that will result in a proposal to extend the Thames Path National Trail downstream from the Thames Barrier to Woolwich Foot Tunnel on the south bank to create this continuous trail by joining it to the England Coast Path in Woolwich. Once complete, this would create a continuous trail of 232 mile / 374 kms along the Thames, and provide the opportunity to walk from central London to the sea.

The stretch can be easily accessed via public transport. There are numerous train stations along the route such as Woolwich Arsenal, Erith, Slade Green, Greenhithe and Gravesend. Public buses serve the villages of Grain and Allhallows with Rochester, and the Thames Clipper offers a daily service between Woolwich Royal Arsenal and central London.

iv) Excepted land

There are several extensive areas of excepted land along the Thames Estuary, including port and industrial facilities at Tilbury, Rainham and Barking on the north bank and Grain, Sheerness and Northfleet on the south bank.

v) Options for Thames Estuary

- Option 1 – As the estuarial limit of the Thames extends beyond Grain to the south-east at Warden Point on the Isle of Sheppey, and north-west to Haven Point on the Essex Coast, one option is to stop the trail at these limits of the Thames Estuary. This option would significantly limit the additional recreational benefits gained from creating new access at the Isle of Grain, Allhallows, Swanscombe and around the Isle of Sheppey in Kent. It would also overlook the opportunity to connect central London to the sea and deliver a continuous Coast Path along both the north coast of Kent and the south coast of Essex. Our proposals relating to the Medway and Swale Estuaries are detailed in separate reports entitled Iwade to Grain and Isle of Sheppey, which are both due for later publication in 2019. The Tilbury to Southend-on-Sea and Southend-on-Sea to Wallasea Island reports will also be published in 2019.
Option 2 – Align the trail up the Thames to Gravesend where there is a 6-day a week ferry to Tilbury. This would provide a near continuous route between the open coasts of Kent and Essex. However this option would not provide any link to the capital and the existing Thames Path.

Option 3 – Align the trail as far as the Woolwich Foot Tunnel. This would provide a pedestrian route from the source of the Thames to the sea at Grain, via the Thames Path National Trail. It would connect the capital city of London directly to the England Coast Path. However, this option would require a number of detours inland around riverside industrial facilities. Extending the trail to Woolwich Foot Tunnel is highlighted as an option here in relation to the proposals for the southern bank of the Thames only. The considerations of the northern bank will be fully explored in the forthcoming report for this part of the Essex Coast.

Option 4 – Align the trail up the Thames to Gravesend where there is a 6-day a week ferry to Tilbury and propose an alternative route to the Woolwich Foot Tunnel to be open on Sunday only when the ferry doesn’t run. However, this option would not provide a year round link to the capital and the existing Thames Path.

Proposed route of the trail

Our proposal for the south bank of the Thames Estuary is to align the trail to the Woolwich Foot Tunnel (Option 3). This fulfils the core objective of the legislation - to create a continuous route around the coast – in a simple and cost effective way. Moreover, the additional recreational and economic benefits of creating a continuous National Trail that runs from the source of the River Thames through central London and on to the sea, at Grain, are significant. The south bank of the Thames Estuary provides an existing network of walked routes to support this continuous National Trail, which includes plans to extend the existing Thames Path National Trail between the Thames Barrier and Woolwich Foot Tunnel. In addition, where we have proposed that the trail should be aligned inland of commercial and industrial areas, several of these are due for re-development in the future, with the potential for riverside access to further improve the experience by being close to the water.

The additional cost to the national implementation programme of aligning the trail to the Woolwich Foot Tunnel will be low as most of the route west of Gravesend is on existing walked routes.

By stopping the route at the limit of the Thames (Option 1), a gap would be created leaving walkers to determine and explore their own route around the estuary, as well as losing the proposed access provision between the Isle of Grain and Allhallows and future proposals for Sheppey in Kent and the north bank of the River Thames. In addition, by stopping the route at the Gravesend-Tilbury ferry (Option 2 and 4), the extra public enjoyment of linking year round to London and the Thames Path National Trail would not be realised.

6. Other considerations on this stretch

a) Recreational Issues

Map B gives an overview of existing public access to the Thames Estuary between Grain and Woolwich, showing public rights of way, access land, the Saxon Shore Way long distance walking route and the Thames Path National Trail.

The Saxon Shore Way and existing coastal public footpaths already afford relatively good linear coastal access in places between Allhallows and Gravesend, and between Stone and Woolwich as can be seen on Map B: Existing Access Grain to Woolwich. There is limited existing access land along this stretch, except for a small area of land at Higham Common, east of Gravesend. For the most part existing access along the stretch maintains relatively close proximity to the sea, but there are points where it moves inland and loses sea views for significant distances (for example at Northfleet – see report GWO 3 of the proposals). We address this issue in the report relating to the places where they occur.
Local user groups asked for dual waymarking (Thames Path and England Coast Path) to be displayed along the route. If the proposals are approved, the waymarking will highlight both the Thames Path and the England Coast Path. Signage is addressed as part of our overall approach to the implementation of the proposals, described later in the Overview.

Local parish councils also requested that we investigate creating a new link between the village of Grain and Allhallows, across Yantlet Creek, and new access at Swanscombe Peninsular. This is part of our proposals (see report GWO 1 and report GWO 4 respectively).

Several of the aspirations of local users which emerged from these discussions have not been addressed fully in our proposals, for reasons set out elsewhere in the report:

- establishment of new crossing over the River Darent, where there is a large detour around the creek – see report GWO 5;
- new motorbike inhibitors at Shorne Marshes and Cliffe due to lack of effectiveness at this location and impact on the integrity of the sea wall. – see report GWO 2;
- improve the feeling of safety along isolated paths through eastern Gravesend - see report GWO 3.

**b) Protection of the environment**

As a result of the proposals described in this Overview and associated reports for each length of coast, the quality of coastal paths will be improved and there will be greater certainty and clarity about the rights people have within the coastal margin. Use of the coast for outdoor recreation can, if not carefully managed, add to environmental pressures such as the presence of people causing disturbance to wildlife, new paths leading to removal and fragmentation of habitat or damage to important historic features. Part of the process we go through on each length of coast when we are developing our detailed proposals is about finding ways to avoid or reduce such impacts, and ensure compliance with legislation to protect the environment.

The creeks, mudflats, saltmarsh and grazing marshes characteristic of the Thames estuary support a wealth of wildlife. Map C Key statutory environmental designations – Grain to Woolwich shows the extensive network of nationally and internationally important sites for wildlife, along the Thames estuary, which include Sites of Special Scientific Interest, Marine Conservation Zones and Special Protection Areas.

A key feature for the Thames, Swale and Medway estuaries as a whole is that during the winter months, it supports internationally recognised populations of non-breeding waterbirds. The extensive areas of soft mud exposed at low tide are the main feeding areas but the birds also need suitable undisturbed places to roost and several species use inland areas that provide supporting habitat for feeding and resting. A recreational management strategy has been developed in connection with the Local Plans for Canterbury, Dartford, Gravesham, Medway and Swale local authorities. The strategy will be implemented over the planning period and incorporates Strategic Access Management and Monitoring, which is now branded as Bird Wise, designed to avoid effects of increased visitors and urbanisation which arise from additional housing near a European site. We have worked closely with the Bird Wise team delivering this strategy to ensure consistency of approach to managing recreation.

The Thames Estuary also bears the marks of a long and distinctive history. Landmarks from its coastal military heritage including forts and pillboxes which were built over many centuries, some of which are Scheduled Ancient Monuments (see Map D: Key statutory landscape designations - Grain to Woolwich). In the more remote areas, the landscape is crossed by numerous drainage ditches and relic sea walls and counter walls, whilst the exploitation of the Thames Estuary for coastal industries has left historic remains in the form of wharves, jetties and hards that were constructed to serve a range of industries in the area.
In developing our detailed proposals for coastal access we have taken account of environmental protection objectives and these are, where relevant, discussed in more detail in the relevant report for each length of coast and (in relation to the natural environment) within the following documents that we have published separately:

- A single Habitats Regulation Assessment ([https://www.gov.uk/government/publications/england-coast-path-from-grain-to-woolwich-comment-on-proposals](https://www.gov.uk/government/publications/england-coast-path-from-grain-to-woolwich-comment-on-proposals)) relating to any potential impact on the conservation objectives of affected sites from the proposals we make in each report for the stretch. This assessment considers any potential impacts in relation both to the individual length of coast covered by each report, and to the stretch as a whole.

c) Interests of owners and occupiers

In discharging our coastal access duty we must aim to strike a fair balance between the interests of the public in having rights of access over coastal land, and the interests of owners and occupiers of land over which any coastal access rights would apply. This was a key driver in the design of our proposals, which were discussed in detail with the owners and occupiers of the affected land during ‘walking the course’ and other processes.

‘Rural Coast – Grain to Shorne Marshes’

The coast from Grain to Shorne Marshes (reports GWO 1 and GWO 2) is predominately rural in character, but starts to feel more industrial as the trail nears Gravesend at Cliffe Fort and Shorne Marshes.

The main concerns raised by owners and occupiers on the rural coast were: disturbance to wintering and breeding birds especially on the Isle of Grain, health and safety liabilities at the disused and unrestored sand and gravel pit in Grain, operational concerns of new and increased access on golf courses and pasture, and any future alignment through the leisure park at Allhallows. We have made specific recommendations to address these issues. The concerns about disturbance to wintering and breeding birds have been addressed in the Habitats Regulation Assessment and Nature Conservation Assessment. The health and safety concerns of new access on the unrestored sand and gravel quarry in Grain were addressed after further advice was sought from Medway’s Environmental Health Officer and the Health and Safety Executive (HSE). We have also included measures to enable public access to be managed alongside landowners’ operations at a golf course, pasture and grazing marsh in Allhallows, such as signage, gates and fencing. In considering any future alignment at the Leisure Park, it is noted that this is excepted land and early discussions will be undertaken with the owners to review all possible options. Such recommendations are set out in the reports which relate to the affected lengths of coast.

‘Urban Coast – Shorne Marshes to Woolwich’

The coast from Shorne Marshes to Woolwich (reports GWO 3 to GWO 6) is predominately urban and industrial in nature. The issues raised by owners and occupiers on this part of the stretch generally related to the operational needs of businesses or to the privacy of residents. These issues are to a large extent addressed by the provisions in the legislation for particular categories of land to be automatically excepted from the coastal access rights – including land covered by buildings and their curtilage and land used as a garden. Land which becomes subject to development in the future will also become excepted from the coastal access rights if it is developed in these ways. Annex C: Excepted land categories sets out these provisions in more detail.

In some places on this part of the stretch we make specific recommendations to address the issues raised by owners and occupiers. For example the public safety implications relating to the legacy of the historic cement works at Swanscombe Peninsular were addressed after further advice was sought from
environmental consultants (CMS-Enviro), Environment Agency, local Environmental Health Officers and the Health and Safety Executive (HSE). Such recommendations are set out in the reports which relate to the affected lengths of coast.

d) Coastal processes

The principal source of information regarding coastal processes on this stretch of coast is the Thames Estuary 2100 Plan (see Annex A: Bibliography), a non-statutory policy document for the management of tidal flood risk. With reference to this document, and with advice from the Environment Agency, we have identified parts of the coast within this stretch which are particularly susceptible to tidal erosion or other geomorphological processes, such as landslips.

In general where the coast is defended to a sufficient standard with some certainty, we have not made any specific proposals to enable the trail to adapt to coastal change - for example, where the trail would be:

- on, or on the landward side of sea defences which would protect it; or
- landward of the roads, railway or industrial areas which would be protected under the policies set out in the Thames Estuary 2100 Plan.

However, in some cases we have identified a possible requirement for roll-back even in scenarios like this, to ensure that we can maintain continuity of the trail should a nearby section of the trail be affected by coastal change (see Part 4.10 of the approved Scheme).

Much of the low lying, rural coastline of the stretch between Grain and Gravesend is defended by earth embankments, along which the trail is often aligned. These seawalls are currently maintained to standards set out in Thames Estuary 2100 Plan, and this plan highlights the possibility of some managed realignment within the Thames Estuary, although the exact locations are still being finalised by the Environment Agency. We have therefore proposed to recommend that the trail is able to roll back along a significant portion of the coastal seawalls in areas which have been shortlisted for managed realignment. On these lengths of coast the trail would be able to roll back so that it can be repositioned without further reference to the Secretary of State, once he has approved the initial route. There is more detail about these roll-back arrangements in part 7 of the Overview and in the relevant reports.

The lower standard of seawall between Cliffe Fort and Higham Marshes (GWO 2) could be subject to coastal erosion in the future if the seawall is not maintained in the long term by the landowner. On these lengths of coast we propose to recommend that the trail is able to roll back so that it can be repositioned without further reference to the Secretary of State, once he has approved the initial route. There is more detail about these roll-back arrangements in part 7 of the Overview and in the relevant reports.

The developed areas between Gravesend and Woolwich (GWO 3 to GWO 6) are largely fronted by hard defences or embankments where the Environment Agency will take further action to keep up with climate and land use change so that flood risk does not increase in the foreseeable future. We have not made any specific proposals to enable the trail to adapt to coastal change on these lengths of coast.

In Shorne and Higham Marshes (GWO 2), Swanscombe Peninsular and Dartford Marshes (GWO 4 and GWO 5) we have aligned the trail adjacent to the seawall on its seaward side. We have done this to allow the trail to follow the existing public footpaths and so the users can benefit from better sea views. On these lengths of coast we propose to recommend that the trail is able to roll back so that it can be repositioned on the seawall without further reference to the Secretary of State, once he has approved the initial route. There is more detail about these roll-back arrangements in part 7 of the Overview and in the relevant reports.
e) Other substantive issues

Promenades

A significant length of the proposed trail is along urban sea defences. These flood barriers are often integrated into neighbouring developments and commercial premises and often have no obvious and clear boundary that marks the landward extent of the barrier. Accordingly, where we have proposed to align the trail along these flood barriers, we often also propose that the landward boundary of the margin should be the edge of the path or the rear edge of a promenade. This provides more clarity on the ground than the default legal position that the whole flood barrier forms part of the margin.

7. Future changes

Below we explain the procedures for future changes to the coastal access provisions, once proposals have been approved by the Secretary of State. Where the need for future changes was foreseeable at the time of preparing the proposals we have indicated this in the relevant reports.

Roll-back

Reports GWO 1, GWO 2, GWO 4 and GWO 5 include proposals for specified parts of the route to ‘roll back’ either:

- in direct response to coastal erosion or other geomorphological processes, or significant encroachment by the sea; or
- in order to link with other parts of the route that need to roll back as a direct result of coastal erosion or other geomorphological processes, or significant encroachment by the sea.

Where sections of the approved route need to change for these reasons in order to remain viable, the new route will be determined by Natural England without any requirement for further reference to the Secretary of State. Coastal erosion can happen at any time and so, in some cases, this provision may need to be invoked between approval of the report and commencement of new access rights.

In particular, so far as we consider it necessary in order to maintain the viability of the route as a whole, we may determine that any part of the route is to be repositioned landward of any physical boundary feature, area of excepted land or area from which we consider it necessary to exclude access e.g. a protected site designated for its conservation value.

In determining the new route, we will take into account:

- the local factors present at that time, including any views expressed by people with a relevant interest in affected land;
- the terms of the Coastal Access duty (see Annex B: Glossary of terms), including the requirement to aim to strike a fair balance between the interests of the public and the interests of any person with a relevant interest in the land; and
- the criteria set out in part B of the Coastal Access Scheme.

Any changes to the route in accordance with these proposals will come into force on a date decided by us. On this date, coastal access rights will come into force as necessary along any new alignment. The date of change will follow any necessary physical establishment work, including any installation of signs to enable the public to identify the modified route on the ground. We will take reasonable steps to ensure that anyone with a relevant interest in land directly affected by the change is made aware this date.

In places where the trail rolls back in this way in response to coastal change, the landward extent of the coastal margin may also move inland automatically:

- with the trail itself, or
- because a landward area of section 15 land (see Annex B: Glossary of terms) or foreshore, cliff, dune, or beach, or a bank, barrier or flat, newly touches the trail when it rolls back, with the result that it automatically becomes part of the margin under the terms of the legislation.

Ordinarily, where roll-back has been proposed and becomes necessary, we would expect the trail to be adjusted to follow the current feature (for example, the cliff edge or top of foreshore). Where we foresee that local circumstances will require more detailed consideration, we have provided further information within the tables in Part 3 of the relevant report. This and the above information is intended as a guide only, based on
information available to us at the time of writing, and on expert advice provided by the access authority, Environment Agency and others. We have taken and will continue to take all reasonable steps to discuss implications and options with all parties likely to affected by such changes, both during the initial planning work that preceded the writing of the reports for each length, and during any future work to plan and implement a ‘rolled back’ route.

Other changes

We will normally be required to submit a variation report seeking approval from the Secretary of State in order to make any other changes to the route of the trail (or to propose non-automatic changes to the landward boundary of the coastal margin) - for example if the land was subject to new build development. Such changes would be subject to the same procedures for consultation, representations and objections as our initial reports. Potential developments of which we are already aware that could potentially affect the route on the stretch are summarised below.

- At Perry’s Farm, south of West Lane in Grain, there are plans to construct an electricity converter station alongside underground cabling (GWO 1, Map GWO 1a). It is unlikely that there will be any impacts the trail in this location, however should West Lane be used for construction traffic, then the developers are willing to implement temporary mitigation measures to ensure the continuity of the trail.

- The RSPB has plans to ecologically enhance the lagoons at Cliffe Pools Nature Reserve, which may involve an upgrade to their landing stage in order to transport the materials to the lagoons. If plans go ahead, this may temporarily affect the route of the trail in GWO 2 (Map GWO 2i).

- Re-development of the Canal Basin Area (east of Gravesend) is currently being considered. This development may provide an opportunity to align the trail in GWO 3 (Map GWO 3a) closer to the coast, with potential new views of the sea.

- The site at Clifton Slipways in Gravesend (GWO 3, Map GWO 3b) was granted full planning permission in August 2017 for a new residential development. This may provide an opportunity to improve the alignment of the trail, once the development is finished.

- At Northfleet Embankment (GWO 3, Map GWO 3d), two planning permissions from 2018, allow for temporary commercial operations and for the re-development of the area. The timescale for either of these developments is unclear, but they would both temporarily affect the route of the proposed trail. However, with the proposed re-development of the area, there may be an opportunity to align the trail closer to the coast.

- The London Resort Company Holdings currently has an option on the land at Swanscombe Peninsular (GWO 4, Maps GWO 4a and GWO 4b) with the intention to develop a new entertainment resort, called the London Resort. The application for a Development Consent Order as a Nationally Significant Infrastructure Project to the Planning Inspectorate is currently expected in 2019. This major development is likely to affect the route, both during construction and once opened, however early plans incorporate a coastal walking route around the peninsula which may allow the trail to remain close to the estuary.

- At Ingress Park (GWO 4, Map GWO 4b), there are plans to extend the residential area into the River Thames. This development is called ‘The Pier’ and may take place within the next 5 years, if approved. It would affect the route of the proposed trail both during construction and once opened, although the proposed plans currently provide an opportunity to maintain the trail close to the coastline, with a night closure.

- A new shared-use crossing over the River Darent near to the River Thames (GWO 5) is being explored by many partners including Sustrans as part of the City to Sea cycle route. The crossing appears to have the support of most stakeholders, however the design has not been confirmed nor has any funding to construct and maintain the crossing been secured. If this crossing is realised,
then we would look at opportunities to realign the trail to follow the crossing leading to the removal of the 9km route around the Rivers Darent and Cray, which is the current proposal.

- A potential commercial development along the River Cray may also provide a new bridge over the river (GWO 5, Map GWO 5c) in the shorter term. If approved and developed, we would look at the opportunity to realign the trail to follow this bridge over the River Cray.

However, even without a variation report:

  i. We would be able to impose new or modify existing local restrictions or exclusions on coastal access rights as necessary, and people with a legal interest in the land would be able to apply to us for such directions under certain circumstances – see chapter 6 of the Coastal Access Scheme.

  ii. Further work could be carried out where necessary either to establish or maintain the route, or to provide any means of access to the coastal margin, using powers and procedures set out in Schedule 20 of the Marine and Coastal Access Act 2009 and chapter 3 of Part 1 the Countryside and Rights of Way Act 2000.

  iii. If at any time the use of affected land should change, the normal rules in relation to excepted land would apply, so for example land newly covered by buildings and their curtilage, and land in the course of development, would automatically become excepted from the coastal access rights – see Annex C: Excepted Land Categories.
### 8. Restrictions and exclusions

Refer to Part 6.7 and Figure 19 of the approved Coastal Access Scheme for more information.

These directions will not prevent or affect:

- any existing local use of the land by right where such use is not covered by coastal access rights;
- any other use people already make of the land locally by formal agreement with the landowner, or by informal permission or traditional toleration; or
- use of any registered rights of common or any rights at common law or by Royal Charter etc

Any such use is not prohibited or limited by these arrangements.
Map E1: Extent of Directions

These directions only affect land where coastal access rights apply and will not affect existing rights of access, such as on public rights of way.
These directions only affect land where coastal access rights apply and will not affect existing rights of access, such as on public rights of way.
Proposed Route

Proposed long-term access exclusion, Danger to Public Safety, Section 24 and Section 25 (1)(b), No Public Access, Year round

Proposed long-term access exclusion, Danger to Public Safety, Section 25 (1)(b), No Public Access, Year round

Proposed long-term access exclusion, Unsuitable for Public Access, Section 25A, No Public Access, Year round

These directions only affect land where coastal access rights apply and will not affect existing rights of access, such as on public rights of way.

Annex B: Glossary of terms

The terms and their explanations below are included for guidance only

Any terms shown in bold type within each explanation are included as a separate entry elsewhere in the Glossary.

1949 Act means the National Parks and Access to the Countryside Act 1949. The 1949 Act includes provisions and procedures for the creation of long-distance routes (now more commonly known as National Trails). These provisions were amended and added to by the 2009 Act for the purpose of identifying the coastal trail. See Bibliography for publication details.

2009 Act means the Marine and Coastal Access Act 2009. Part 9 of the 2009 Act includes provisions to improve public access to the coast. There are supplementary provisions relating to:

- consideration of coastal access reports, objections and representations by the Secretary of State – in Schedule 1A of the 1949 Act (inserted by Schedule 19 of the 2009 Act);
- the establishment and maintenance of the English coastal route – in Schedule 20 of the 2009 Act.

Section 1.2 of the Coastal Access Scheme includes a brief overview of the main provisions, which are explained in more detail in subsequent chapters. See Bibliography for publication details.

alignment is the term we use to describe the choices we make about the proposed route of the trail and the landward boundary of the coastal margin.

alternative route means a route proposed to the Secretary of State under section 55C of the 1949 Act, to operate as a diversion from the ordinary route at certain times. The associated term optional alternative route denotes a route which the public has the option to use at times when the ordinary route is unsuitable for use because of flooding, tidal action, coastal erosion or other geomorphological processes. Neither type of alternative route creates any seaward margin. Paragraphs 4.10.16 to 4.10.18 of the Scheme explain more about the potential use of optional alternative routes.

building has the same meaning given in Schedule 1 to CROW, as amended for the coast by the Order. The term includes any structure or erection and any part of a building. For this purpose “structure” includes any tent, caravan or other temporary or moveable structure. It does not include any fence or wall, anything which is a means of access (as defined by CROW section 34 – for example steps or bridges), or any slipway, hard or quay.

costal access duty means Natural England’s duty under section 296 of the 2009 Act to secure improvements to public access to the English coast. It is explained in more detail in 1.2 of the Coastal Access Scheme.

costal access rights is the term we use to describe the rights of public access to the coast provided under section 2(1) of CROW as a result of the provisions of the 2009 Act and the Order. Coastal access rights are normally rights of access on foot for open-air recreation. These rights are by default subject to national restrictions and may additionally be subject to directions which restrict or exclude them locally. Section 2.4 of the Coastal Access Scheme explains more about the nature and management of coastal access rights.

costal margin or margin means a margin of land at the coast falling within one or more of the descriptions given at article 3 of the Order. Its main component is land subject to the coastal access rights, but it also contains other land, including some land that is not accessible to the public. A land owner may also voluntarily include land in the coastal access margin by making a dedication. Section 2.3 of the Scheme explains these other categories of land and how they fit in.
coastal processes is a term used in the reports to mean coastal erosion, encroachment by the sea or other physical change due to geomorphological processes such as landslip. Where any part of the trail could be significantly affected by coastal processes, either directly or because of the need to maintain continuity with a part that is directly affected, we have included recommendations for it to roll back in accordance with a description in the relevant report.

CROW means the Countryside and Rights of Way Act 2000. Coastal access rights take effect by virtue of CROW section 2(1). Certain provisions in CROW are amended or added to by the 2009 Act and the Order for the purposes of the coast. Chapter 2 of the Coastal Access Scheme provides an overview of how the amended CROW provisions apply to the coast. See Bibliography for publication details.

dedicate/dedication means any voluntary dedication of land by the owner or long leaseholder under section 16 of CROW so that it will be subject to access rights under that Act. A dedication may also make provision for specific national restrictions that would otherwise apply over the affected land to be removed or relaxed.

Land within the coastal margin that was previously dedicated as access land under CROW becomes subject to the coastal access regime, including the national restrictions and the reduced level of liability operating on other parts of the margin with coastal access rights. On certain land, a dedication may be used to ‘opt in’ to the coastal access regime land where it would not otherwise apply. Chapter 2 of the Coastal Access Scheme explains these scenarios in more detail.

definitive map means the legal record of public rights of way. It shows public footpaths, bridleways, restricted byways, and byways open to all traffic.

direction means a direction under chapter II of CROW Part 1 to impose local restrictions or exclusions on the use of the coastal access rights.

Estuarial waters are defined in section 309 of the 2009 Act as any waters within the limits of transitional waters within the meaning of Council Directive 2000/60/EC (the European Community Water Framework Directive). Transitional waters are defined in Schedule 1 to the Directive as “bodies of surface water in the vicinity of river mouths which are partially saline in character as a result of their proximity to coastal waters but which are substantially influenced by freshwater flows”. The Environment Agency has mapped their seaward limit on each English estuary. Section 10.1 of the Scheme explains the relevance of estuarial waters to our proposals for coastal access at estuaries.

excepted land – see Annex C.

exclude/exclusion refer to local exclusion of the coastal access rights by direction (as opposed to the national restrictions that apply on all coastal access land by default). In this way the use of the rights may where necessary either be excluded completely, or restricted in specified ways by means of a local restriction. Section 6.6 of the Coastal Access Scheme explains the provisions in detail and our approach to their use.

foreshore is not defined in the 2009 Act or the Order. In the reports and this Overview it is taken to mean the land between mean low water and mean high water.

gate is used in several ways in the reports:

- ‘Field gate’ means a wide farm gate, for vehicle access.
- ‘Kissing gate’ means a pedestrian access gate, sometimes suitable for wheelchairs.
- ‘Wicket gate’ means a narrow field gate, sometimes suitable for wheelchairs, but unsuitable for larger vehicles.
guide fencing is a term the reports may use to describe simple temporary fencing which can be put up and
taken down with minimal cost or effort – see figure 18 in chapter 6 of the Coastal Access Scheme.

Habitats Regulations Assessment means an assessment made in accordance with regulation 63 of the
Conservation of Habitats and Species Regulations 2017 (as amended).

the legislation is the term the reports use to describe four pieces of legislation which include provisions
relevant to the implementation of our proposals: the 2009 Act, the 1949 Act, CROW and the Order. There
are separate entries in the glossary which describe each of these in more detail.

a length is the term used to describe the part of the stretch covered by each individual report.

local access forum means a local access forum established under section 94 of CROW. Natural England
is required to consult the relevant local access forum in the preparation of the reports, and to invite
representations from it on its proposals – see chapter 3 of the Coastal Access Scheme for details.

margin (see coastal margin)

national restrictions – see Annex D.

National Trail means a long-distance route approved by the Secretary of State under section 52 of the
1949 Act.

objection means an objection by a person with a relevant interest in affected land (i.e. its owner or
occupier) to Natural England about a proposal in a report. An objection must be made on certain specified
grounds, in accordance with the provisions in Schedule 1A of the 1949 Act (as inserted by Schedule 19 of
the 2009 Act). Stage 3 of the implementation process described in chapter 3 of the Coastal Access
Scheme provides an overview of the procedures for considering objections.

ordinary route means the line normally followed by the trail.

the Order means the Access to the Countryside (Coastal Margin) (England) Order 2010 (S.I. 2010/558),
made under section 3A of CROW. It sets out descriptions of land which are coastal margin and amends
Part I of CROW in certain key respects for the purposes of coastal access. See Bibliography for publication
details.

public right of way (PRoW) means a public footpath, bridleway, restricted byway or byway open to all
traffic. These public rights of way are recorded on the definitive map.

relevant interest means a relevant interest in land, as defined by section 297(4) of the 2009 Act. This is a
person who:

- holds an estate in fee simple absolute in possession in the land;
- holds a term of years absolute in the land, or
- is in lawful occupation of the land.

A relevant interest must therefore own or occupy the land in question, rather than simply having some other
kind of legal interest over it.

representation means a representation made by any person to Natural England regarding proposals in
any of its reports. A representation may be made on any grounds, in accordance with the provisions in
Schedule 1A of the 1949 Act (as inserted by Schedule 19 of the 2009 Act). Stage 3 of the implementation
process described in chapter 3 of the Coastal Access Scheme provides an overview of the procedures for
considering representations.

restrict/restriction – see “exclude/exclusion”.
**Roll-back** is the term the Scheme uses to describe arrangements made under the provisions of section 55B of the 1949 Act, whereby we may propose to the Secretary of State in a coastal access report that the route of a specified part of the trail which is subject to significant erosion or other coastal processes, or which links to such a section of trail, should be capable of being repositioned later in accordance with the proposals in our relevant report, without further confirmation by the Secretary of State. Section 4.10 of the Scheme explains in more detail how this works, and part 6(d) of this Overview explains this in the context of the stretch.

**route section** is the term used in the reports to describe short sections of the proposed route for the trail. Each route section is assigned a nationally unique serial number which we use to refer to it in the proposals and on the accompanying maps.

**section 15 land** means land with public access rights under:

- section 193 of the Law of Property Act 1925;
- a local or private Act;
- a management scheme made under Part I of the Commons Act 1899; or
- an access agreement or access order made under Part V of the National Parks and Access to the Countryside Act 1949;

or land subject to, or potentially subject to, public access under section 19 of the Ancient Monuments and Archaeological Areas Act 1979.

Where Section 15 land forms part of the coastal margin (which it may do in any of the ways explained in section 4.8 of the Coastal Access Scheme), these rights apply instead of the coastal access rights. Figure 6 in Section 2.4 of the Coastal Access Scheme shows the relationship of Section 15 land to the coastal access regime in more detail.

**spreading room** is the term we use to describe any land, other than the trail itself, which forms part of the coastal margin and which has public rights of access. Spreading room may be either seaward or landward of the trail, according to the extent of the margin. Section 4.8 of the Scheme explains in more detail the ways in which land may become spreading room. Spreading room may be subject to directions that restrict or exclude the coastal access rights locally from time to time. However, the Scheme does not use the term to describe land which is subject to a direction which excludes access for the long-term. Land is not described as spreading room in the Scheme if it falls into one of the descriptions of excepted land, although it may become spreading room if it loses its excepted status as a result of a change of use, or if the owner dedicates it as coastal margin. Where highways such as roads or public rights of way cross spreading room, they remain subject to the existing highway rights rather than becoming subject to coastal access rights.

**statutory duty** means the work an organisation must do by order of an Act of Parliament.

**stretch** is the whole area covered by our compendium of statutory reports making coastal access proposals to the Secretary of State, each covering one length within the stretch.

**temporary route** means a diversionary route which operates while access to the trail is excluded by direction. Unlike an alternative route, a temporary route may be specified later by or under the direction without requiring confirmation by the Secretary of State, though land owner consent is needed in some circumstances. Figure 17 in chapter 6 of the Coastal Access Scheme explains the provisions for temporary routes in more detail.
the trail is the term we use to describe the strip of land people walk along when following the route identified for the purposes of the Coastal Access Duty. See part 1.3 of the Coastal Access Scheme. Following approval by the Secretary of State of our proposals, the trail along that stretch becomes part of the National Trail known as the England Coast Path. By default, it is the land within 2 metres on either side of the approved route line, but often it is wider or narrower than this. The trail forms part of the coastal margin.

variation report means a report to the Secretary of State under section 55(1) of the 1949 Act. Natural England may prepare a variation report recommending changes to coastal access proposals that have previously been approved. Figure 10 in chapter 3 of the Coastal Access Scheme explains in more detail the circumstances when a variation report is necessary.

A variation report may also be prepared by Natural England (in the context of our recommendations for the trail which we have a duty to secure under section 296 of the 2009 Act) to recommend that the route of another National Trail at the coast is modified.
Annex C: Excepted land categories

The effect of Schedule 1 to the Countryside and Rights of Way Act 2000 is that some categories of land are completely excluded from the coastal access rights, even if they fall within the coastal margin:

- land covered by buildings or the curtilage of such land;
- land used as a park or garden;
- land used for the getting of minerals by surface working including quarrying (except, under certain circumstances, the removal of sand or shingle from an area of foreshore or beach);
- land used for the purposes of a railway (including a light railway) or tramway;
- land covered by pens in use for the temporary detention of livestock;
- land used for the purposes of a racecourse or aerodrome;
- land which is being developed and which will become excepted land under certain other excepted land provisions;
- land covered by works used for the purposes of a statutory undertaking (other than flood defence works or sea defence works) or the curtilage of such land;
- land covered by works used for an electronic communications code network or the curtilage of any such land;
- land the use of which is regulated by byelaws under section 14 of the Military Lands Act 1892 or section 2 of the Military Lands Act 1900;
- land which is, or forms part of, a school playing field or is otherwise occupied by the school and used for the purposes of the school; and
- land which is, or forms part of, a highway (within the meaning of the Highways Act 1980) – see below.

Some other land categories are excepted by default, but we may propose that the trail should cross them on an access strip – in which case the strip itself is not excepted from the coastal access rights. Where land in any of these categories would form part of the coastal margin in proposals, it would therefore be fully excepted from coastal access rights. That includes:

- land on which the soil is being, or has at any time within the previous 12 months been, disturbed by any ploughing or drilling undertaken for the purposes of planting or sowing crops or trees;
- land used for the purposes of a golf course;
- land which is, or forms part of, a regulated caravan or camping site; and
- land which is, of forms part of, a burial ground.

Highways are also excepted from the coastal access rights. This does not prevent the trail from following a public footpath or other highway, and people can continue exercising their rights to use highways that fall within the wider spreading room. Such highways form part of the coastal margin even though the access rights along them are afforded by other legislation.

Land owners may choose, under the legislation, to dedicate excepted land as a permanent part of the coastal margin. These provisions are explained in more detail in Chapter 2 of our Coastal Access Scheme.
Annex D: National restrictions

The coastal access rights which would be newly introduced under our proposals include most types of open-air recreation on foot or by wheelchair including walking, climbing and picnicking.

The scope of these coastal access rights is normally limited by a set of rules that we call in the Coastal Access Scheme the “national restrictions”.

They list some specific activities not included within the coastal access rights – for example camping, horse riding and cycling. The national restrictions on the coastal access rights are set out on the pages that follow.

The national restrictions do not prevent such recreational uses taking place under other rights, or with the landowner’s permission, or by traditional tolerance – for example on an area of foreshore where horse riding is customary. In particular, these national restrictions have no effect on people’s use of public rights of way or Section 15 land (see the entry for ‘section 15 land’ in the Glossary).

The land owner (or in some circumstances a long leaseholder or farm tenant) also has the option to include such recreational uses within the coastal access rights on a particular area of land, or on his holdings generally. He can do this:

- permanently (i.e. on behalf of himself and future owners of the land), by dedicating such rights under section 16 of the Countryside and Rights of Way Act 2000 (CROW); or
- until further notice, by agreeing that we should give a direction under CROW Schedule 2 paragraph 7 to this effect.

We can provide more information about these options on request.
Countryside and Rights of Way Act 2000

SCHEDULE 2 RESTRICTIONS TO BE OBSERVED BY PERSONS EXERCISING RIGHT OF ACCESS
(Section 2)

General restrictions

1 (1) Subject to sub-paragraph (2), section 2(1) does not entitle a person to be on any land if, in or on that land, he –

(a) drives or rides any vehicle other than an invalid carriage as defined by section 20(2) of the Chronically Sick and Disabled Persons Act 1970,
(b) uses a vessel or sailboard on any non-tidal water,
(c) has with him any animal other than a dog,
(d) commits any criminal offence,
(e) lights or tends a fire or does any act which is likely to cause a fire,
(f) intentionally or recklessly takes, kills, injures or disturbs any animal, bird or fish,
(g) intentionally or recklessly takes, damages or destroys any eggs or nests,
(h) feeds any livestock,
(i) bathes in any non-tidal water,
(j) engages in any operations of or connected with hunting, shooting, fishing, trapping, snaring, taking or destroying of animals, birds or fish or has with him any engine, instrument or apparatus used for hunting, shooting, fishing, trapping, snaring, taking or destroying animals, birds or fish,
(k) uses or has with him any metal detector,
(l) intentionally removes, damages or destroys any plant, shrub, tree or root or any part of a plant, shrub, tree or root,
(m) obstructs the flow of any drain or watercourse, or opens, shuts or otherwise interferes with any sluice-gate or other apparatus,
(n) without reasonable excuse, interferes with any fence, barrier or other device designed to prevent accidents to people or to enclose livestock,
(o) neglects to shut any gate or to fasten it where any means of doing so is provided, except where it is reasonable to assume that a gate is intended to be left open,
(p) affixes or writes any advertisement, bill, placard or notice,
(q) in relation to any lawful activity which persons are engaging in or are about to engage in on that or adjoining land, does anything which is intended by him to have the effect –
   (i) of intimidating those persons so as to deter them or any of them from engaging in that activity,
   (ii) of obstructing that activity, or
   (iii) of disrupting that activity,
(r) without reasonable excuse, does anything which (whether or not intended by him to have the effect mentioned in paragraph (q)) disturbs, annoys or obstructs any persons engaged in a lawful activity on the land,
(s) engages in any organised games, or in camping, hang-gliding or para-gliding, or
(t) engages in any activity which is organised or undertaken (whether by him or another) for any commercial purpose.

(2) Nothing in sub-paragraph (1)(f) or (j) affects a person's entitlement by virtue of section 2(1) to be on any land which is coastal margin if the person's conduct (to the extent that it falls within sub-paragraph (1)(f) or (j)) is limited to permitted fishing-related conduct.

(3) In sub-paragraph (2) the reference to permitted fishing-related conduct is a reference to the person –

(a) having a fishing rod or line,
(b) engaging in any activities which –
   (i) are connected with, or ancillary to, fishing with a rod and line, or with a line only, in the exercise of a right to fish, and
   (ii) take place on land other than land used for grazing or other agricultural purposes.

2 (1) In paragraph 1(k), “metal detector” means any device designed or adapted for detecting or locating any metal or mineral in the ground.

   (2) For the purposes of paragraph 1(q) and (r), activity on any occasion on the part of a person or persons on land is “lawful” if he or they may engage in the activity on the land on that occasion without committing an offence or trespassing on the land.

3 Regulations may amend paragraphs 1 and 2.

4 (1) During the period beginning with 1st March and ending with 31st July in each year, section 2(1) does not entitle a person to be on any land if he takes, or allows to enter or remain, any dog which is not on a short lead.

   (2) Sub-paragraph (1) does not apply in relation to land which is coastal margin.

5 Whatever the time of year, section 2(1) does not entitle a person to be on any land if he takes, or allows to enter or remain, any dog which is not on a short lead and which is in the vicinity of livestock.

6 In paragraphs 4 and 5, “short lead” means a lead of fixed length and of not more than two metres.

6A (1) Whatever the time of year, section 2(1) does not entitle a person to be on any land which is coastal margin at any time if –

   (a) that person has taken onto the land, or allowed to enter or remain on the land, any dog, and

   (b) at that time, the dog is not under the effective control of that person or another person.

   (2) For this purpose a dog is under the effective control of a person if the following conditions are met.

   (3) The first condition is that –

   (a) the dog is on a lead, or

   (b) the dog is within sight of the person and the person remains aware of the dog's actions and has reason to be confident that the dog will return to the person reliably and promptly on the person's command.

   (4) The second condition is that the dog remains –

   (a) on access land, or

   (b) on other land to which that person has a right of access.

   (5) For the purposes of sub-paragraph (4), a dog which is in tidal waters is to be regarded as remaining on access land.

6B (1) Section 2(1) does not entitle a person to be on any land which is coastal margin if, on that land, the person obstructs any person passing, or attempting to pass, on foot along any part of the English coastal route, any official alternative route or any relevant temporary route.

   (2) In this paragraph –

   “the English coastal route” means the route secured pursuant to the coastal access duty (within the meaning of section 296 of the Marine and Coastal Access Act 2009);

   “official alternative route” has the meaning given by section 55J of the National Parks and Access to the Countryside Act 1949;

   “relevant temporary route” means a route for the time being having effect by virtue of a direction under section 55I of that Act to the extent that the line of the route passes over coastal margin.
Enquiries about the proposals should be addressed to:
