Ministry of Justice

Justice Data Lab Analyses by Region

Data Visualisation Tool

10 October 2019

Introduction

The Justice Data Lab produces tailored reports for organisations who have requested reoffending data. The most recent Justice Data Lab publications can be found here:

https://www.gov.uk/government/collections/justice-data-lab-pilot-statistics

As part of our wider work on improving data visualisation and accessibility, we have developed this map tool based on the published data available in the Justice Data Lab summary document.

The tool provides users with the capability to filter findings from the Justice Data Lab by region in order to provide a summary of support delivered in each region, and the impact on reoffending as evaluated by the Justice Data Lab.

The JDL interactive map

The tool can be found here:

https://public.tableau.com/profile/moj.analysis#!/vizhome/JDLDataVisualisationTool/JDL AnalysesbyRegion

Future Visualisation Methods

Having reviewed how we can most effectively present our statistics, we propose to cease producing the interactive map and explore alternative visualisation methods in the future. If you have any comments, please let the team know via the addresses below:
