This publication provides information on the number of Military Personnel (defined as the strength), joining (intake) and leaving (outflow) the UK Armed Forces. Detail is provided for both the Full-time Armed Forces and Reserves. Further statistics can be found in the Excel tables.

The recent trends in personnel numbers in this report relate to the targets outlined in the Strategic Defence and Security Review (SDSR) 2015 and the Future Reserves 2020 (FR20) programme. Prior to SDSR 2015, publications reported against SDSR 2010, the Three Month Exercise (3ME), Army 2020 and the Future Reserves 2020 (FR20) programme.

Some of the statistics previously published in the following publications can now be found in this release: Monthly Quarterly and Annual Personnel Reports, UK Reserve Forces and Cadets, Service Personnel Bulletin 2.01, and Service and Civilian Bulletin 2.03.

Key Points and Trends

▲ 192,660 Strength of UK Forces Service Personnel at 1 October 2019
an increase of 520 (0.3 per cent) since 1 October 2018

▼ 132,340 Full-time Trained Strength (RN/RM & RAF) and Full-time Trade Trained Strength (Army) at 1 October 2019
a decrease of 3,020 (2.2 per cent) since 1 October 2018

▲ 8.4% Deficit against the planned number of personnel needed (Workforce Requirement) at 1 October 2019
an increase in the deficit from 6.6 per cent as at 1 October 2018

▲ 32,760 Strength of the Trained Future Reserves 2020 at 1 October 2019
an increase of 500 (1.5 per cent) since 1 October 2018

▲ 14,880 People joined the UK Regular Armed Forces in the past 12 months (1 October 2018 – 30 September 2019)
an increase of 2,750 (22.7 per cent) compared with the previous 12 month period

▲ 15,120 People left the UK Regular Armed Forces in the past 12 months (1 October 2018 – 30 September 2019)
an increase of 360 (2.5 per cent) compared with the previous 12 month period

▲ 5,710 People joined the Future Reserves 2020 in the past 12 months (1 October 2018 – 30 September 2019)
an increase of 960 (20.2 per cent) compared with the previous 12 month period

▼ 5,110 People left the Future Reserves 2020 in the past 12 months (1 October 2018 – 30 September 2019)
a decrease of 360 (6.6 per cent) compared with the previous 12 month period

Would you like to be added to our contact list, so that we can inform you about updates to these statistics and consult you if we are thinking of making changes? You can subscribe to updates by emailing DefStrat-Stat-Tri-Enquiries@mod.gov.uk.
This publication contains information on the strength, intake and outflow for the UK Armed Forces overall and each of the Services: Royal Navy/Royal Marines (RN/RM), Army and Royal Air Force (RAF).

The Ministry of Defence (MOD) announced on 29 June 2016 that it was changing the Army trained, disciplined manpower by changing the definition of Trained Strength to include those in the Army who have completed Phase 1 training. This affects some Tri-Services totals. This does not affect the Naval Service or the RAF in any way. The MOD held a public consultation on SDSR Resilience: Trained strength definition for the Army and resultant changes to Ministry of Defence Armed Forces personnel statistics between 11 July and 21 January 2017. A consultation response was published on 7 November 2016. The changes outlined in the consultation and response have been incorporated into this publication from the 1 October 2016 edition onwards. This affects statistics in some of the accompanying Excel tables, specifically tables: 3a, 3e, 5a, 5b, 5c, 5d, 6a, 6b, 7a, 7b and 7c. Terminology has also been updated in Excel tables 3c and 4.

Detailed statistics, including unrounded figures, and historic time series can be found in the Excel tables. These include quarterly statistics on the number of Service and Civilian Personnel, Separated Service (the proportion of personnel breaching harmony guidelines), Applications to each of the Services and Military Salaries. Further historic statistics will be added in due course; in the meantime, historic statistics can be found in the following archived publications: Monthly, Quarterly and Annual Personnel Reports, UK Reserve Forces and Cadets Service Personnel Bulletin 2.01, Service and Civilian Bulletin 2.03, UK Armed Forces Maternity Report, Diversity Dashboard and Quarterly Location Statistics. The glossary contains definitions of terminology used in this publication.

A calendar of upcoming MOD statistical releases can be found on GOV.UK

A National Statistics publication
The United Kingdom Statistics Authority has designated these statistics as National Statistics, in accordance with the Statistics and Registration Service Act 2007 and signifying compliance with the Code of Practice for Official Statistics. Designation can be broadly interpreted to mean that the statistics:

- meet identified user needs;
- are well explained and readily accessible;
- are produced according to sound methods; and
- are managed impartially and objectively in the public interest.

Once statistics have been designated as National Statistics it is a statutory requirement that the Code of Practice shall continue to be observed.
Policy background

The main factors affecting decisions about the size of the Armed Forces required by the MOD to achieve success in its military tasks include:

- An assessment of current and future threats to UK national security;
- The need for contingent / reactive capability – the requirement to be able to respond immediately to domestic or international crisis;
- Current operational and international obligations (e.g. NATO, UN);
- Changes in technology, the introduction of new equipment and restructuring that leads to equipment becoming obsolete or surplus to requirements;
- The need to deliver against the military tasks as efficiently as possible, maintaining a balanced, affordable defence budget.

The Service personnel statistics in this publication are reported against the [2015 Strategic Defence and Security Review](https://www.gov.uk/government/publications/strategic-defence-security-review-2015), released in November 2015. Prior to SDSR 2015, publications reported against the planned Future Force 2020, as set out in the SDSR 2010 which planned to reduce the size of the Armed Forces.

Army Trained Strength

On 29 June 2016, the MOD announced that the Army planned to use Regular and Reserve Phase 1 trained personnel in response to crises within the UK. Following this, the term 'Trained Strength' would include all Army personnel trained in the core function of their Service (i.e. those who have completed Phase 1 training). The MOD has consulted on these changes and the resultant impact they will have on this publication and a consultation response was published on 7 October 2016.

From the 1 October 2016 edition onwards, Army personnel who have completed Phase 1 training (basic Service training) but not Phase 2 training (trade training), are considered trained personnel. This change will enable the Army to meet the SDSR 15 commitment to improve support to UK resilience. The Trained Strength definition for the Royal Navy, RAF, Maritime Reserve and RAF Reserves has not changed, reflecting the requirement for their personnel to complete Phase 2 training to be able to fulfil the core function of their respective Services.

Army personnel who have completed Phase 2 training are now called 'Trade Trained'. This population aligns with the old definition of trained personnel, therefore maintaining the continuity of the statistical time series, and will continue to be counted against the workforce requirement and SDSR target for 2020.

The Army have undertaken a review of training requirements and Royal Engineers Other Ranks personnel joining from 1 July 2019 will become Trade Trained after Initial Trade Training (ITT) and will join the Full-time Trade Trained Strength (FTTTS), and therefore we may see a change in the trend.

Full-Time Armed Forces Personnel

In order to meet the manpower reduction targets set out in SDSR 2010, the [Three Month Exercise](https://www.gov.uk/government/publications/three-month-exercise-3me-and-army-2020-a2020), a redundancy programme coupled with adjusted recruiting (intake) and contract extensions, were set. The redundancy programme is now complete.

On 23 November 2015, the MOD published the National Security Strategy and Strategic Defence and Security Review 2015. SDSR 2015 outlines plans to uplift the size of the Regular Armed Forces, setting targets for a strength of 82,000 for the Army, and increasing the Royal Navy/Royal Marines and Royal Air Force by a total of 700 personnel. The [SDSR 2015 Defence Key Facts](https://www.gov.uk/government/publications/strategic-defence-security-review-2015-key-facts) booklet announced new targets for 2020 for each of the Services.

Future Reserves 2020 (FR20) Programme

The Future Reserves 2020 (FR20) programme aims to increase the size of the Reserve Forces. Further information on the growth of the Reserves can be found in the Policy Background section of previous [Monthly Service Personnel Statistics](https://www.gov.uk/government/publications/monthly-service-personnel-statistics) publications.

As a result of the changes to Army Trained Strength (referred to above) and their impact on the Army Reserve, the MOD released a [Written Ministerial Statement](https://www.gov.uk/government/publications/written-ministerial-statement-containing-revised-future-reserves-2020-fr20-strength-growth-profiles) containing revised Future Reserves 2020 (FR20) strength growth profiles on 8 November 2016. Reporting of the growth of the Reserves will be based on strength profiles only.

This statement outlined FR20 Trained Strength targets for 31 March 2019 as follows: Maritime Reserve 3,100, Army Reserve 30,100 and RAF Reserves 1,860, a total of 35,060 personnel.
UK Service Personnel

Application data since 1 October 2017 has not been available. We are currently verifying recently received information and relevant figures will be included in later editions of this publication.

UK Service Personnel comprise the total strength of the military personnel employed by the Ministry of Defence (Excel tables, Table 1). The current strength of the UK Service Personnel is 192,660 which includes:

- All UK Regular personnel and all Gurkha personnel (which at 1 October 2019 comprised 76.8 per cent of UK Service Personnel);
- Volunteer Reserve personnel (which at 1 October 2019 comprised 19.1 per cent of UK Service Personnel);
- Other Personnel including the Serving Regular Reserve, Sponsored Reserve, Military Provost Guard Service, Locally Engaged Personnel and elements of the Full-time Reserve Service (FTRS) (which at 1 October 2019 comprised 4.0 per cent of UK Service Personnel).

The total strength of the UK Forces' has increased between 1 October 2018 and 1 October 2019 by 0.3 per cent (520 personnel), as shown in Table 1. Since 1 October 2018, while the total strength of the UK Regular Forces has reduced, this has been more than offset by increases in Gurkhas and Volunteer Reserves.

Source: Defence Statistics (Tri-Service)

1. UK Forces comprises all UK Regular, Gurkha, Volunteer Reserve and Other personnel. The constituents of “Other personnel” are reported towards the top of this page.
Full-Time Trained and Trade-Trained Strength (Army)

Following [public announcement] and [public consultation] the definition of Army Trained Strength has changed. From 1 October 2016, UK Regular Forces and Gurkha personnel in the Army who have completed Phase 1 training (basic Service training) but not Phase 2 training (trade training), are now considered Trained personnel. This change will enable the Army to meet the SDSR 15 commitment to improve support to UK resilience. Previously, only personnel who had completed Phase 2 training were considered trained.

This change does not affect the Royal Navy/Royal Marines (RN/RM) or the Royal Air Force (RAF).

As a result of this change, the Full-time Trained Strength (FTTS) includes:
- UK Regular Forces who have passed Phase 1 and Phase 2 training, in the RN/RM & RAF, and UK Regular Forces and Gurkha personnel who have passed Phase 1 training in the Army;
- Those elements of the Full-time Reserve Service (FTRS) who are counted against the workforce requirement, for all three Services.

This change was implemented in the 1 October 2016 edition of this publication.

As can be seen in Table 2, the Army Full-time Trained Strength has decreased by 1,090 (1.4 per cent) since 1 October 2018.

Figure 1: FTTS & FTTTS in the Army since Trained Strength definition change (Oct 16)

As it can be seen from figure 1, Army trained strength (FTTS) fell consistently between October 2016 and April 2019. This trend has now changed due to an increase in recruitment, which has fed into an increase in the number of recruits completing Phase 1 Training. This increase has not yet filtered into the Trade Trained (FTTTS) strength due to the time taken to complete Phase 2 training.
Full-Time Trained Strength (RN/RM & RAF) and Full-Time Trade Trained Strength (Army) and Workforce requirement

The Full-time Trained Strength (FTTS) (RN/RM & RAF) and Full-time Trade Trained Strength (FTTTS) (Army) (which comprises military personnel who have completed both ‘Phase 1’ and ‘Phase 2’ training) is counted against the Workforce Requirement. The difference between the two is measured as either a surplus or deficit. This is one indicator of the Service’s ability to execute military tasks. Other indicators include the surplus / deficit within key trades or in specific Ranks.

As at 1 October 2019, the Tri-Service FTTS (RN/RM & RAF) & FTTTS (Army) has decreased by 2.2 per cent (3,020 personnel) since 1 October 2018. The FTTS (RN/RM & RAF) and FTTTS (Army) comprises: 128,690 Regular personnel (97.2 per cent), 2,930 Gurkhas (2.2 per cent); and 730 Full-time Reserve Service personnel (0.5 per cent) who are filling Regular posts and count against the Workforce Requirement.

The current deficit against the Workforce Requirement is 8.4 per cent for the UK Armed Forces. There is a deficit of 5.2 per cent, 10.4 per cent and 6.3 per cent in the Royal Navy/Royal Marines (RN/RM), the Army and the Royal Air Force (RAF) respectively, as can be seen in Table 3.

Figure 2: FTTS (RN/RM & RAF) and FTTTS (Army) against Workforce Requirement and 2020 target derived from SDSR 2015

SDSR 2020 Targets

The Full-time Trained Strength (RN/RM & RAF) and Full-time Trade Trained Strength (Army) includes all UK Regular personnel, Gurkhas and those elements of the Full-time Reserve Service (FTRS) who are counted against the workforce requirement (see glossary for more detail).

Workforce Requirement is the number of Service personnel.
UK Regular Personnel (excluding Gurkhas)

As at 1 October 2019, the Trained and Untrained Strength of the UK Regular Forces (which excludes Gurkhas) was 144,650. The Service split for this figure can be found in Table 4 below.

There are 11,190 untrained personnel in the UK Regular Forces (excluding Gurkhas), of which 3,960 are in the RN/RM, 4,330 in the Army and 2,900 are in the RAF. The Untrained Strength reflects the number of personnel who can potentially join the Trained Strength.

### Intake and Outflow

In the 12 months to 30 September 2019, there was a net outflow of 240 personnel from the UK Regular Forces. There has been a 91.0 per cent reduction in net outflow compared with the 12 months to 30 September 2018 (2,630). This is mainly driven by increase in intake to Army Regulars, which has gone up by 35.2 per cent.

### Intake

- Intake into the trained and untrained UK Regular Forces was 14,880 in the 12 months to 30 September 2019. This has increased from 12,130 in the 12 months to 30 September 2018.
- Compared to the 12 months to 30 September 2018, intake to the RN/RM, Army and RAF has increased by 2.9 per cent, 35.2 per cent and 13.4 per cent respectively.
- For the Army, intake in the 12 months to 30 September 2019 (9,080) has been the highest since September 2013. The marked increase since March 2019 is due to improved recruitment, which is reflected in the 12 months rolling totals below.

### Figure 3: Intake to and Outflow from the UK Regular Forces over a 12-month period
UK Regular Personnel

Outflow

- Outflow from the trained and untrained UK Regular Forces was 15,120 in the 12 months to 30 September 2019; up from 14,760 in the 12 months to 30 September 2018.

- Across all Services, VO was the most common reason for outflow of Trained and Trade-Trained personnel, accounting for 62.1 per cent of outflow in the 12 months to 30 September 2019.

- In the 12 months to 30 September 2019, 7,630 trained (RN/RM & RAF) and trade trained (Army) personnel left through VO; the VO rate was 5.8 per cent. The VO Rate for the RN/RM was 5.2 per cent, for the RAF it was 4.9 per cent and for the Army it was 6.5 per cent.

- In the 12 months to 30 September 2019, the VO rate amongst Other Ranks (6.2 per cent) is higher when compared to Officers (4.4 per cent).

Voluntary Outflow (VO) encompasses all trained (RN/RM & RAF) and Trade Trained (Army) personnel who voluntarily exit before the end of their agreed engagement or commission period.

Time Expiry is a term used to describe those in the Armed Services who reach the end of their engagement or commission and then leave.

Other includes outflow from the trained (RN/RM & RAF) and trade trained (Army) strength due to, amongst others, medical reasons, misconduct, compassionate, dismissals and death.

VO Rate is the number of personnel voluntarily outflowing as a proportion of the average Trained Strength for the outflow period.

There is no single reason why personnel leave on Voluntary Outflow, but the personnel who completed the Armed Forces Continuous Attitude Survey indicated reasons for leaving the Armed Forces included the impact of Service life on family and personal life and opportunities outside the Armed Forces.

Figure 4: Outflow of trained (RN/RM & RAF) and trade trained (Army) UK Regulars by exit reason (12 months to 30 September 2019)
Future Reserves 2020 (FR20) Programme Monitoring

Following consultation on changes to the Army Trained Strength definition and the removal of the FR20 intake targets, the MOD released Future Reserves 2020 Trained Strength growth profiles in a [Written Ministerial Statement](#) on 8 November 2016. Reporting of the growth of the Reserves will be based on Trained Strength profiles only.

**Future Reserves 2020 Strength**

Following this, progress against FR20 population Trained Strength targets are reported in Table 6a of the [Excel tables](#).

The total **Trained and Untrained Strength** of the Tri-Service Future Reserves 2020 at 1 October 2019 was 36,760, an increase of 600 personnel or 1.7 per cent since 1 October 2018.

**Figure 5: Maritime Reserve Trained Strength**

The Maritime Reserve total strength as at 1 October 2019 was 3,910. This is an increase of 160 personnel (4.3 per cent) since 1 October 2018.

Figure 5 shows that the Maritime Reserve Trained Strength was 2,850 as at 1 October 2019. This is an increase of 50 personnel (1.8 per cent) since 1 October 2018.

**Figure 6: Army Reserve Trained Strength**

The Army Reserve total strength as at 1 October 2019 was 29,760. This is an increase of 310 personnel (1.0 per cent) since 1 October 2018.

Figure 6 shows that the Army Reserve Trained Strength was 27,250 as at 1 October 2019. This is an increase of 300 (1.1 per cent) since 1 October 2018.

**Figure 7: RAF Reserves Trained Strength**

The RAF Reserves total strength as at 1 October 2019 was 3,090. This is an increase of 130 personnel (4.4 per cent) since 1 October 2018.

Figure 7 shows that as at 1 October 2019 the RAF Reserves Trained Strength was 2,660. This is an increase of 150 personnel (6.0 per cent) since 1 October 2018.
Future Reserves 2020 (FR20) Programme Monitoring

FR20 Intake and Outflow statistics

Intake and outflow statistics report how many people have left or joined the Trained or Untrained Strengths. As well as leavers and new recruits, this can include personnel transferring to or from the Regular Forces, other Reserve populations, or Reserve re-joiners.

The total intake rates for each Service in the 12 months to 1 October 2019 are as follows:

- The Maritime Reserve total intake rate was 25.2% per cent; an increase of 5.4 percentage points since the 12 months to 1 October 2018.
- The Army Reserve total intake rate was 13.8% per cent; an increase of 2.2 percentage points since the 12 months to 1 October 2018.
- The RAF Reserves total intake rate was 21.6% per cent; an increase of 2.5 percentage points since the 12 months to 1 October 2018.

The total outflow rates for each Service in the 12 months to 1 October 2019 are as follows:

- The Maritime Reserve total outflow rate was 21.1% per cent; an increase of 3 percentage points since the 12 months to 1 October 2018.
- The Army Reserve total outflow rate was 12.8% per cent; a decrease of 1.8 percentage points since the 12 months to 1 October 2018.
- The RAF Reserves total outflow rate was 17.4% per cent; an increase of 1.1 percentage points since the 12 months to 1 October 2018.
**Separated Service**

*Separated service* measures absence from normal place of duty. The time an individual experiences separated service is compared against each Service’s *Individual Harmony* guidelines to ensure a balance between duty and leisure for all Service personnel.

A breach of individual harmony guidelines occurs when Service personnel experience separated service for longer than the period outlined in individual harmony guidelines, which are based on the structures and organisation of that Service. The guidelines are measured over a 36 month period and the limits are **660 days** away for the RN/RM; **498 days** for the Army; and **468 days** away for the RAF.

Using 1 April 2019 as an example:

**Trained/Trade Trained UK Regular personnel breaching in the 36 months ending to 31 Mar 2019**

<table>
<thead>
<tr>
<th>RN/RM</th>
<th>Army</th>
<th>RAF</th>
</tr>
</thead>
<tbody>
<tr>
<td>15.3%</td>
<td>17.8%</td>
<td>23.1%</td>
</tr>
</tbody>
</table>

The percentage breaching harmony has been on a downward trend. The recent increase in Army reflects increasing demands of operations and exercises, enabling support for *Ex Saif Sareea 3* and *Ex Trident Juncture*.

Separated service data can be found in table 10 of the accompanying Excel tables.

**Figure 11: Percentage of UK Regular Forces breaching harmony (1 July 2014 - 30 June 2019)**
Military Salaries

The Military Salaries indices are based on annual pay rates. All indices are calculated using the number of service personnel at each rank at 1 April 2018. With the introduction of Pay 16, the strength profile no longer matches previous years meaning it is not possible to continue the current index. The index is now split into two due to the new Pay Award: the old index based against salaries in 2001/02 (the year the Pay 2000 system was introduced); and the new index based against salaries in 2016/17 (the year the Pay 16 was introduced).

As can be seen from Table 12 (in the accompanying excel tables), the Military Salaries Index remained the same between 2011/12 and 2012/13 due to the public sector pay freeze. Between 2014/15 and 2017/18 all rates of base pay were uplifted by one per cent each year, as recommended by the Armed Forces Pay Review Body (AFPRB). In 2018/19, the rates of base pay were uplifted by two percent in line with AFPRB’s recommendation. The latest report from the AFPRB is available [here].

Source: Defence Statistics (Tri-Service)

Figure 12 highlights that Real growth in military salaries and average earnings growth for the latest point available, 2018/19, was below the Retail Price Index (RPI) measure of inflation.

1. Real growth in salaries is growth over and above inflation. It represents the increase in purchasing power between one year and the next. For example, if salaries grew by 2%, but prices rose by 1%, real salary growth would be about 1%, because someone earning that salary could purchase around 1% more goods and services. Real pay growth can be negative if inflation is outstripping salary growth, values at 0% indicate an increase in line with inflation. The measure of inflation used here is growth in Retail Price Index (RPI).

2. When calculating the real growth of average earnings the Office for National Statistics (ONS) Average Weekly Earnings index (K45U: whole economy, total pay including bonuses) has been employed. Military salaries do not include bonuses or allowances.

Figure 12 highlights that Real growth in military salaries and average earnings for the latest point available, 2018/19, was below the Retail Price Index (RPI) measure of inflation.

The real growth of military salaries excluding bonuses was –1.0 per cent during 2018/19. Similarly, the real growth in UK average earnings for the economy (total pay including bonuses) also experienced a negative growth rate of –0.2 per cent in 2018/19 as a result of average earnings falling back below inflation. The gap between the real growth of military salaries and real growth of average earnings in 2018/19 has reduced compared to 2017/18.
Further Information

Rounding
Figures in this publication have been rounded to the nearest 10, though numbers ending in a “5” have been rounded to the nearest multiple of 20 to prevent the systematic bias caused by always rounding numbers upwards. For example; a value of “25” would be rounded down to “20” and a value of “15” would be rounded up to “20”.

Additionally, totals and sub-totals are rounded separately and so may not equal the sums of their rounded parts.

Percentages are calculated from unrounded data and presented to one decimal place.

The MOD Disclosure Control and Rounding policy is published on GOV.UK and we have applied this policy to the statistics in the accompanying Excel tables. The policy is available here: https://www.gov.uk/government/publications/defence-statistics-policies.

Revisions
Corrections to the published statistics will be made if errors are found, or if figures change as a result of improvements to methodology or changes to definitions. When making corrections, we will follow the Ministry of Defence Statistics Revisions and Corrections Policy. All corrected figures will be identified by the symbol “r”, and an explanation will be given of the reason for and size of the revision. Corrections which would have a significant impact on the utility of the statistics will be corrected as soon as possible, by reissuing the publication. Minor errors will also be corrected, but for efficient use of resource these corrections may be timed to coincide with the next annual release of the publication.

There have been a number of revisions since the previous edition. In Table 1 we have revised an inputting error from 1 July 2019. The Workforce Requirement figures in Table 3a have also been updated from 1 April 2019.
