Cumbria Coast MCZ

Description:

The Cumbria Coast marine conservation zone (MCZ) is an inshore site that extends approximately 27 km from south of Whitehaven, around the cliffs at St Bees Head, to the mouth of the Ravenglass Estuary. The total area of the site is approximately 18 km². The surrounding area is particularly important for seabirds with an estimated 10,000 breeding seabirds thought to be present. The MCZ partially overlaps with a site of special scientific interest which protects seabird nesting areas.

Qualifying features:

The Cumbria Coast MCZ hosts the following habitats: intertidal biogenic reefs; intertidal sand and muddy sand; high energy intertidal rock; moderate energy infralittoral rock; honeycomb worm (*Sabellaria alveolata*) reefs; intertidal underboulder communities; and peat and clay exposures.

Management:

- Climbing agreement during the nesting season.
- North Western Inshore Fisheries and Conservation Authority voluntary agreement to not set fixed nets close to St Bees Head.

Stakeholder Concerns:

None raised.

**MCZ Habitat Features of Conservation Importance (Points)**

- Blue Mussel Beds (HOCI 1)
- Cold-water coral reefs (HOCI 2)
- Estuarine rocky habitats (HOCI 5)
- Fragile sponge and anthozoan communities on subtidal rocky habitats (HOCI 7)
- Honeycomb worm (*Sabella alveolata*) reefs (HOCI 8)
- Horse mussel (*Modiolus modiolus*) reefs (HOCI 9)
- Intertidal under boulder communities (HOCI 10)
- Littoral chalk communities (HOCI 11)
- Maerl beds (HOCI 12)
- Mud habitats in deep water (HOCI 13)
- Native oyster beds (Ostrea edulis) (HOCI 14) DO NOT PUBLISH EXTERNALLY
- Peat and clay exposures (HOCI 15)
- Ross worm (*Sabellaria spinulosa*) reefs (HOCI 16)
- Seagrass beds (HOCI 17)
- Sea pens and burrowing megafauna (HOCI 18)
- Sheltered muddy gravels (HOCI 19)
- Subtidal chalk (HOCI 20)
- Subtidal sands and gravels (HOCI 21)
- Tide-swept channels (HOCI 22)

**MCZ Broadscale Habitat (Polygons)**

- High energy intertidal rock (A1.1)
- High/Moderate energy intertidal rock (A1.1/A1.2)
- Moderate energy intertidal rock (A1.2)
- Low energy intertidal rock (A1.3)
- Intertidal coarse sediment (A2.1)
- Intertidal sand and muddy sand (A2.2)
- Intertidal sand and muddy sand/Intertidal mud (A2.2/A2.3)
- Intertidal mud (A2.3)
- Intertidal mixed sediments (A2.4)
- Coastal saltmarshes and saline reedbeds (A2.5)
- Intertidal sediments dominated by aquatic angiosperms (A2.6)
- Intertidal biogenic reefs (A2.7)
- High energy infralittoral rock (A3.1)
- Moderate energy infralittoral rock (A3.2)
- Moderate energy infralittoral/circalittoral rock (A3.2/A4.2)
- Low energy infralittoral rock (A3.3)
- High energy circalittoral rock (A4.1)
- High/moderate energy circalittoral rock (A4.1/A4.2)
- Moderate energy circalittoral rock (A4.2)
- Low energy circalittoral rock (A4.3)
- Subtidal coarse sediment (A5.1)
- Subtidal sand (A5.2)
- Subtidal mud (A5.3)
- Subtidal mixed sediments (A5.4)
- Subtidal macrophyte-dominated sediment (A5.5)
- Subtidal biogenic reefs (A5.6)
- Infralittoral rock and thin sandy sediment (A3.A2, non ENG 20)
- Infralittoral rock and thin mixed sediment (A3.A4, non ENG 21)
- Infralittoral muddy sand (A5.24, non ENG 23)
- Infralittoral sandy mud (A5.33, non ENG 24)
