

List of protected zones and the respective protected zone quarantine pests and their respective codes. (As Annex III, Commission Implementing Regulation (EU) 2019/2072)

These additional requirements apply to movements of specified plants into and within protected zones. They are above and beyond ordinary plant passports and apply to plants all the way from propagation to final consumer. All entries are for plants intended for planting (excluding fruit and seeds) unless otherwise specified. Please contact your local PHSI for further details.

Under these regulations the EPPO Code or scientific name of the pest should be used as the PZ code on plant passporting labels.
