ROMANIZATION OF ARABIC

BGN/PCGN 1956 System

(Revised Presentation 2019)

This System was adopted by the BGN in 1946 and by the PCGN in 1956 and is applied by BGN and PCGN in the systematic romanization of Arabic geographical names in Bahrain, Egypt, Iraq, Jordan, Kuwait, Libya, Oman, Qatar, Saudi Arabia, Syria, the United Arab Emirates, Yemen, the West Bank and Gaza Strip¹.

Uniform results in the romanization of Arabic are difficult to obtain, since vowel points and diacritical marks are generally omitted from both handwriting and printed script. It follows that for correct identification of the words which appear in any particular name, knowledge of its standard Arabic-script spelling including proper pointing, and recognition of dialectal and idiosyncratic deviations are essential.

In order to bring about uniformity in the Roman-script spelling of geographical names in Arabic-language areas, the system is based insofar as possible on fully pointed Modern Standard Arabic (MSA). In the interest of clarity, vowel pointing to indicate short vowels has been applied to the examples given below, and examples of the, more usual, unpointed script have also been provided; it should also be noted that the dots which occur on some characters of the Arabic script are not vowels but rather are an integral part of the base consonant.

Arabic script is written from right to left, and does not make a distinction between upper and lower case.

Table 1 below shows the written consonant characters used in standard Arabic script; Table 2 shows vowel characters and other diacritical marks, some of which are usually not written; and Table 3 shows the Perso-Arabic script characters which, although not part of the standard Arabic alphabet, are sometimes used to represent sounds not present in Standard Arabic. These tables should be used in conjunction with the Notes and Special Rules which follow. These explain elements of Arabic grammar and orthography which affect romanization and should be treated as an integral part of the Romanization System for Arabic.

¹ It is not used to represent names in Algeria, Chad, Comoros, Djibouti, Lebanon, Mauritania, Morocco, Sudan or Tunisia, where the spellings used on official Roman-script sources are used.

Table 2: Vowel Characters and Diacritical Marks²

² Numbers 1, 2, 3, 8, 11, 12, 13 and 14 are not usually written.

³ This vowel mark should be romanized as 'i' when it occurs in the following positions:

a. Below the consonant character

b. Below the *shaddah* (see row 14 and note 7), which itself occurs above a consonant character

c. Below a *hamzah* occurring above an *alif*

Table 3: Modified/Non-Standard Arabic Script Characters

⁴ Used in Tunisian Arabic Script.
⁵ Used principally in Iraq, but also sometimes used in other Arabic speaking countries to represent the 'g' sound.
⁶ Used in Moroccan Arabic Script.

Table 4: Nume	eral	S
---------------	------	---

•	١	۲	٣	٤	0	٦	٧	٨	٩
0	1	2	3	4	5	6	7	8	9

Although Perso-Arabic script is written from right to left, numerical expressions, e.g. $197\Lambda \rightarrow 1968$, are written from left to right.

NOTES

1. The symbol \bigcirc is used in this system to symbolise any Arabic consonant character. It is not itself an Arabic letter.

2. Hamzah (*) is written in Arabic in association with most instances of initial alif, except those which belong to the definite article al or which bear a maddah (see note 9). Hamzah is written above the alif (¹) if the accompanying short vowel is a fathah or dammah and usually below the alif(<u>1</u>) if the accompanying short vowel is a kasrah. When the purpose is to indicate the presence of a glottal stop, hamzah is written over medial alif (¹), $w\bar{a}w$ (⁵) and $y\bar{a}$ ', typically without dots (5); or following final alif (1), these characters serving only to "bear" the hamzah. Hamzah following kasrah (⁹) is written (5); the $y\bar{a}$ ' is usually in the initial or medial form and the dots are omitted e.g. bi'r (¹). Hamzah following dammah (⁶) is written (¹). Hamzah following a long vowel is written without a bearer and is positioned on the line of print like a regular character, e.g. San'ā'. The romanization of hamzah (' – Unicode encoding 2019) should always be carefully distinguished from that of 'ayn (' - Unicode encoding 2018).

3. Alif(1) occurs with the following uses:

a. Initially, it indicates that the word begins with a vowel or diphthong; the *alif* itself is not romanized, but rather "carries" the short vowel, which is romanized;

e.g., أبو ظبي $\rightarrow Ab\bar{u}$ Zaby.

b. With maddah (\tilde{l} - row 18 in the vowel table), it is represented \bar{a} ; e.g., $\bar{l} \to \bar{A} l b \bar{u} \to \bar{A} l b \bar{u}$ Mu'ayt. See also note 9.

c. Medially and finally it is represented \bar{a} ; e.g., $\rightarrow B\bar{a}b$, $\rightarrow Sayd\bar{a}$.

d. Medially and finally, *alif* may serve as the bearer of *hamzah*, e.g. ι \rightarrow *ra*'s. See also note 2.

4. The $t\bar{a}$ 'marbūtah character (δ), which looks like $h\bar{a}$ ' with two dots above and occurs only at the end of words, is romanized h, except in an $id\bar{a}fah^7$ noun phrase construction, where it is romanized t, in accordance with pronunciation. e.g. $Muh\bar{a}fazah$ (as an isolated word) but $Muh\bar{a}fazat Baghd\bar{a}d$. In exceptional cases, when it is necessary to distinguish it from the $t\bar{a}$ ' marbūtah, the ending $fathah + h\bar{a}$ ' (\circ \circ) may be romanized $a \cdot h$ when the character $h\bar{a}$ ' (\circ) is pronounced as such. Example: $Muntaza \cdot h$. (See also special rule 12). The $t\bar{a}$ marbūtah is always preceded by the short vowel fathah (\circ) and is therefore romanized as **ah** or **at**, except when it is preceded by alif when it is romanized $\bar{a}h$ (not $\bar{a}ah$), e.g. $Ham\bar{a}h$ (\sim), and as $\bar{a}t$ within an $id\bar{a}fah$ construction.

⁷ The *idāfah* is a grammatical construction in Arabic consisting of two or more nouns, which indicates a relationship of possession between the words. For example, *Muhāfazat Baghdād*, which could be translated in English as the Governorate **of** Baghdad.

5. The character $y\bar{a}$ ' (in final form but without dots) preceded by the vowel point *fathah* is known as *alif maqşūrah*. This character may also be pointed \dot{z} and should be romanized \dot{a} . See character 7 in the vowel table.

6. The classical Arabic grammatical endings written with the nunation symbols $(tanw\bar{n})$ may be romanized, when necessary, by aⁿ, iⁿ, uⁿ. In modern spoken Arabic, these endings have become silent and should not be romanized: e.g. classical $alifu^n$; modern alif.

7. Doubled consonant sounds are represented in Arabic script by placing a *shaddah* (أ) over a consonant character, although like the short vowels the *shaddah* may not always be written. In romanization the letter should be doubled, e.g. *Quwwah*, '*Abbās*. However, the combination of the consonant character $y\bar{a}$ ' with a *shaddah* preceded by a *kasrah* (ζ) at the end of a word is romanized \bar{i} , e.g. *Gharbī*; a word ending *kasrah* + $y\bar{a}$ ' with a *shaddah* + $t\bar{a}$ ' *marbūțah* is romanized $\bar{i}yah$ (rather than *iyyah*), e.g. Image: is romanized *As Sulaymānīyah* and not *As Sulaymānīyah*; and when the *kasrah* + $y\bar{a}$ ' + shaddah combination is followed by the sound masculine plural ending (\bar{y} to \bar{y} to \bar{y} to \bar{y} to \bar{y} in should be romanized as $S\bar{a}hat$ al 'Abbās**īyīn**.

8. *Hamzat al waşl* (1), which is utilized only in the pointing of classical Arabic, is romanized ' as illustrated in the classical form of its name *hamzatu'l waşli*.

9. Since *maddah* ($\overline{1}$), which is placed over *alif* (1), often occurs in word-initial position, no confusion results from the use of \overline{a} for *alif maddah* ($\overline{1}$) as well as for *fathah* followed by *alif* (1°).

10. The ligature \forall represents *lām-alif*, and should be romanized *lā*.

11. In word initial position the combination $Alif + W\bar{a}w(\mathfrak{s})$ is sometimes used to render an initial long vowel sound in words of non-Arabic origin. Where this is clearly the case it should be romanized \bar{U} . In words of Arabic or uncertain origin it should be romanized Aw. In word-medial or word-final position it should always be romanized $\bar{a}w$. Similarly, the combination $Alif + Y\bar{a}$ ' (\mathfrak{s}) is romanized \bar{I} to render an initial long vowel sound but as $\bar{a}y$ in word-medial or word-final position.

SPECIAL RULES

1. The Arabic definite article al(U) should be treated as follows:

a. Initial definite articles should be capitalized and hyphens should not be used to connect parts of names, e.g. *Ash Shāriqah*. When appearing medially in a name the initial 'a' should be lower case, e.g. *Tall al Lahm*.

b. When the definite article precedes a word beginning with one of the "sun letters" t, th, d, dh, r, z, s, sh, ş, d, ţ, z, l, or n – the l is assimilated in pronunciation and romanization, thus yielding, for example, the romanization $Ar Riy\bar{a}d$, rather than $Al Riy\bar{a}d$ for $|l|_{L_{2}}$.

c. If sources contradict over the inclusion or non-inclusion of the definite article in a name, preference should be given to the form with the article.

2. Conjunctions and prepositions should be romanized according to their written form in Arabic script and should be lower case. In cases where the conjunction or preposition ends in a long or

short vowel any assimilated pronunciation should not be shown in the romanized form. e.g. Khabb wa ash Sha $f(\dot{\epsilon})$.

There are two exceptions to this rule:

a. In the case of the preposition *li* (ل), where the *alif* of the definite article is assimilated in the written form as well as pronunciation, the written form should be shown in romanization as follows: *Mişr lit Tayarān* (مصر للطيران); *Ash Sharikah al 'Āmmah lil Maghāzil* (الشركة العامة للمغازل).

b. In the case of the preposition *bi* (ب), the *alif* of the definite article is assimilated in pronunciation and, although the *alif* remains in the written form the short vowel it carries changes from 'a' to 'i'. For example: *Al Qaryah bid Duwayr* (القرية بالدوير) but *Ad Duwayr* (الحرية); and *Al Harajah bil Qur'ān* (الحرجة بالعرآن) but *Al Qur'ān* (الحرجة بالعرآن).

3. The Arabic word for God (lam) should be written *Allāh*. The *alif khanjarīyah* (*dagger alif*) (b) above the second $\int (l\bar{a}m)$ in the word lam, like the short vowels, is not usually written but should be romanized \bar{a} , like a full-size *alif*. This diacritical mark appears in a few other Arabic words, for instance on the *alif maqsūrah* as described in note 5.

4. Names which consist of noun phrases⁸ should be written as separate words. The definite article within such names should be romanized *al*, not *ul*, e.g., '*Abd Allāh*, '*Abd ar Raḥmān*, *Dhū al Faqār*, and as noted in special rule 1, the medial *al* should be lower case.

5. The Arabic word بن should be romanized *Bin* rather than *Ibn* whenever written without *alif*, that is between two proper nouns, e.g., *'Umar Bin al Khaţţāb*. Where it appears with *alif* (أبن), it should be romanized *Ibn*.

6. The Turkish word *Paşa* should be romanized from Arabic script as $B\bar{a}sh\bar{a}$. The Turkish word *Bey* should be romanized as *Bey* in Egyptian names, no matter how it is written in Arabic-language sources, but in other Arabic areas it should be romanized as *Bak* where written \underline{A} and as *Bayk* when written \underline{A} .

7. The modern colloquial word $S\bar{\iota}d\bar{\iota}$ (سيدي) should be give precedence over the classical form $Sayyid\bar{\iota}$. This does not preclude the spelling $Sayyid\bar{\iota}$ if the latter is indicated by the Arabic script or other evidence – for instance, if the $y\bar{a}$ ' is written with a *shaddah* (\circ).

8. When colloquial forms of words are found as part of place names on authoritative sources, these spellings should be retained and reproduced in Romanization. Examples of this include: a. The colloquial word $B\bar{u}$ should not be changed to the standard form $Ab\bar{u}$.

b. The colloquial word for water, written مية on Arabic maps, should be romanized *Mayyat*. c. Place names where the initial alif of the Arabic definite article (Al) is omitted, e.g. *Lūsayl* (a truncation of the more standard spelling of *Al Wusayl*).

9. Place names of Aramaic origin in Syria often contain initial consonant clusters consisting of b plus another consonant such as l or h. In romanization, the clusters bl, bh, etc., should be so represented.

⁸ See also note 4

10. In names containing the Arabic word for back, ridge, or hill, appearing as either $ext{iff}(Zahr)$ or $ext{or}(Dahr)$ in Arabic sources, the word should be romanized to reflect the particular Arabic spelling shown. Where sources differ, preference should be given to the form found on the most authoritative source.

11. In formal Arabic, the spelling of some words ending in a long vowel character may change according to that word's grammatical function in a sentence. For example, the personal name *Abū Bakr* (ابو بكر) would become *Abī Bakr* (ابي بكر) when preceded by a generic in an *idāfah* construction⁹ e.g. *Shāri ' Abī Bakr* (ما بي بكر) – Abu Bakr Street). The spelling of such words as found on the most authoritative source should be used in the romanized form of the name. Other common words affected by this rule are *Banū/Banī* (sons of...) and *Dhū/Dhī* (owner of...). Examples of names in this category include *Jabal Abā aş Şabbān* (محافظة ذي قار) and *Muhāfazat Dhī Qār*).

12. Occasionally the character sequences $\overset{\circ}{k}, \overset{\circ}{k}, \overset{\circ}{k}$, and $\overset{\circ}{r}$ occur. They may be romanized $k \cdot h$, $d \cdot h$, $s \cdot h$, and $t \cdot h$ in order to differentiate these romanizations from the digraphs kh, dh, sh, and th, which are used to represent the characters $\overset{\circ}{\tau}, \overset{\circ}{\tau}, \overset{\circ}{\tau}$, and $\overset{\circ}{\tau}$ respectively. See also note 4.

⁹ See footnote 7
